QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, DISTRICTS, AND SUB-DISTRICTS OF

ENGLAND AND WALES;

WITH TABLES SHOWING BIRTHS, DEATHS, AND NOTIFIED CASES OF INFECTIOUS DISEASE IN CERTAIN LARGE TOWNS.

Published by Authority of the Registrar-General.

Printed under the Superintendence of His Majesty's Stationery Office,
AND SOLD BY WYMAN AND SONS, LTD., FETTER LANE, E.C.

No. 237.] **Marriages**—*October, November, December*, 1907.
Births and **Deaths**—*January, February, March*, 1908. [Price 9*d.*

General Register Office, Somerset House,
27*th April*, 1908.

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1908 is estimated at 44,539,593 persons; that of England and Wales at 35,348,780, that of Scotland at 4,826,587, and that of Ireland at 4,364,226.

In the United Kingdom 299,176 *births* and 203,709 *deaths* were registered in the three months ended 31st March 1908. The natural increase of population was, therefore, 95,467. The number of *persons married* in the quarter ended 31st December 1907 was 175,522.

The birth-rate in the United Kingdom in the *first* quarter of 1908 was 26·9, and the death-rate 18·3, per 1000 of the estimated population. The marriage-rate in the *fourth* quarter of 1907 was 15·8 per 1000.

The facts, in detail, concerning Scotland and Ireland, are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Passenger Movement.

According to a Return issued by the Board of Trade it appears that in the three months ended 31st March 1908, the total passenger movement to and from places out of Europe showed a net balance inward of 2,893 passengers, compared with a net balance outward of 81,396 passengers in the corresponding period of the previous year.

3000 Wt 36 5/08 D & S 3 31556

The net outward balance among persons of British origin amounted to 21,667 persons. Of these 17,249 were English, 548 Welsh, 3,127 Scottish, and 1,721 Irish passengers, whilst there was an inward balance of 978 British Colonial passengers. Compared with the numbers in the corresponding period of last year the net outward balance of English, Welsh, and British Colonial passengers showed a decrease of 52 per cent., that of Scottish a decrease of 71 per cent., and that of Irish a decrease of 57 per cent.

Among persons of foreign origin there was a net balance inward of 24,560, against a net balance outward of 32,132 in the corresponding period of the previous year.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,028 registration sub-districts of England and Wales in the three months ended 31st March 1908; and the MARRIAGES in 15,664 churches or chapels, in 14,986 registered places of worship unconnected with the Established Church, and in 634 Superintendent Registrars' Offices, in the three months ended 31st December 1907.

Marriages.

In the *fourth* quarter of 1907 the marriages of 148,794 persons were registered, being equal to an annual rate of 16·9 persons married per 1000 of the estimated population, against an average rate of 17·4 per 1000 in the fourth quarters of the ten years 1897–1906.

Among registration counties with populations exceeding 100,000, the lowest marriage-rates were 13·6 in Surrey, 13·9 in Shropshire, 14·1 in Hertfordshire, 14·3 in Middlesex and in Herefordshire, 14·8 in Somersetshire, and 14·9 in Essex; the highest rates were 19·5 in the East Riding of Yorkshire and in Monmouthshire, 19·7 in Suffolk and in Nottinghamshire, 20·4 in Glamorganshire, and 22·3 in Carmarthenshire.

Births.

The births registered in the *first* quarter of 1908 numbered 240,411, and were in the proportion of 27·3 annually per 1000 of the population; this is 1·3 per 1000 below the mean birth-rate in the ten preceding first quarters. In registration counties with populations exceeding 100,000 the lowest birth-rates during the quarter were 19·9 in Carnarvonshire, 20·1 in Sussex, 21·6 in Northamptonshire, 21·7 in Cornwall, 22·1 in Dorsetshire, 22·2 in Herefordshire, 22·4 in Somersetshire, and 22·6 in Devonshire; the highest rates were 31·2 in the North Riding of Yorkshire, 31·3 in Staffordshire, 31·4 in Northumberland, 31·6 in Nottinghamshire, 35·1 in Durham, 35·4 in Glamorganshire, and 38·6 in Monmouthshire.

In 76 great towns the birth-rate averaged 28·3 per 1000, ranging from 16·1 in Hornsey and in Hastings, 17·7 in Bournemouth, 19·8 in Northampton, 20·6 in Bradford, and 21·1 in Halifax, to 34·9 in Merthyr Tydfil, 35·0 in Hanley, 35·2 in Swansea, 35·7 in West Bromwich, 36·4 in Newport (Mon.), 37·3 in St. Helens, 37·4 in Middlesbrough, and 41·7 in Rhondda. In 142 smaller towns the mean birth-rate was 26·9 per 1000, and in the remainder of England and Wales, excluding the 218 chief towns, it was 26·3.

Natural Increase of Population.

The natural increase of population in England and Wales last quarter by excess of births over deaths was 84,052, against 89,535, 96,976, and 69,419 in the first quarters of 1905, 1906, and 1907 respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 29*s.* 0*d.*, 32*s.* 6*d.*, and 34*s.* 8*d.* respectively in the preceding three quarters, was 33*s.* 2*d.* last quarter. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, $3\frac{7}{8}d.$; of prime beef, $6\frac{5}{8}d.$; of inferior mutton, $6\frac{3}{8}d.$; of prime mutton, $9\frac{4}{8}d.$ Compared with the average prices in the preceding three months, the mean prices of prime beef and of inferior mutton showed respectively a decrease of $\frac{3}{8}d.$ and $\frac{4}{8}d.$, while the mean prices of inferior beef and of prime mutton showed respectively an increase of $\frac{1}{8}d.$ and $\frac{4}{8}d.$ The average price in the London Market of sea-borne coal put in barge from the collier in the Thames was 18*s.* 8*d.* per ton, against 19*s.* 11*d.* per ton in the first quarter of 1907. The mean price of Consols was 86*l.* 5*s.* 11*d.*, having been 82*l.* 10*s.* 8*d.* in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England, which had been raised on 7th November, 1907, to 7*l.*, was reduced on 2nd January, 1908, to 6*l.*, and was further reduced on 16th January to 5*l.*, on 23rd January to 4*l.*, on 5th March to 3*l.* 10*s.*, and on 19th March to 3*l.* The mean rate during the quarter was 4*l.* 4*s.* 10*d.*

The average number of paupers relieved in England and Wales on the last day of each week in the quarter was 819,191; exclusive of lunatics in county and borough asylums, registered hospitals and licensed houses, of casual paupers, of persons receiving outdoor medical relief only, and of patients in the fever and small-pox hospitals of the Metropolitan Asylum District. Of these 819,191 persons, 274,123 received in-door, and 545,068 out-door, relief. The proportion of the population in receipt of poor-law relief was 23·2 per 1000, against 23·6 and 23·1 per 1000 respectively in the first quarters of 1906 and 1907.

Meteorology.

A detailed report, prepared in the Meteorological Office, on the weather over the United Kingdom in the past quarter, with a table of Monthly Results for a number of stations in England and Wales, will be found on pp. 71–89.

In the early part of the quarter the conditions were mostly cold and changeable, but with the opening of February, when a steady current of air from West set in, the weather became milder and somewhat more settled. After the middle of February a wet, stormy period was experienced, lasting until very nearly the close of the month, the temperature being, however, as a rule, above the average. In March the weather was exceedingly changeable, and mostly cold, especially in the third week, when a sharp frost occurred over nearly the whole country. Rain was frequent in all the more western and northern districts, and the monthly fall was in excess of the average over the United Kingdom generally.

January opened with a spell of exceedingly cold weather. At the close of December a brisk Easterly wind spread over these islands from the Continent, and at the commencement of the new year a hard frost prevailed very generally, the sheltered thermometer falling below 20° in nearly all districts, and below 15° in several isolated localities. On January 5th, however, a mild breeze from S. or S.W. began to spread over our western districts, and on the following day, when the equatorial current became general, a rapid thaw took place over the entire country, the rise of temperature in 24 hours amounting, in some places, to more than 30°. The Southerly air was brought in by a deep cyclonic system which skirted the North of Scotland on the 6th, and produced gales from S.W. to N.W., and heavy rain at many places in the north and north-west. Next day another cyclonic area of equal intensity passed eastwards across Ireland and England, where the wind blew a gale from W., veering to N.W. and N., with heavy falls of rain and snow, especially in the east and south-east of England. The disappearance of the latter system over the Continent was followed by the extension of an anti-cyclone from the north-westward and a renewal of sharp frost, the thermometer in many parts of England again falling below 20° between the 10th and 13th; on the grass a reading of 4° was registered at Llangammarch Wells, and a reading of 5° at Birmingham. After the 14th and until very nearly the close of the month the type of weather varied a good deal from time to time, the most clearly defined period occurring between the 18th and 24th, when an anticyclone lay over nearly the whole Kingdom, and produced thick wet fogs, especially over England and the North Sea. Frost occurred at intervals, but was seldom very sharp, the cold being interspersed with intervals of mild weather; on the 16th and 17th, and again 10 days later, the thermometer in many parts of the country rose slightly above 55°.

In February the weather for the first 12 days was mainly fair and dry, excepting in the extreme western and northern districts, where rain was frequent. Temperature was, as a rule, above the average, but sharp frosts were experienced on the nights of the 1st and 2nd, and again on those of the 11th and 12th; on the latter occasions the thermometer in the screen fell below 25° in several parts of England, while on the surface of the grass it fell below 20°, a reading of 17° being recorded at Greenwich on the night of the 12th. After the middle of the month the weather fell into a very stormy condition, the wind being often strong to a gale from Westerly quarters (between S.W. and N.W.) with occasional heavy falls of rain, and snow or sleet between the 27th and 29th. The heaviest storm of the month, and indeed of the quarter, occurred on the 22nd, when the passage of a deep cyclonic system from Iceland to Norway was accompanied by severe gales from W. or N.W. over nearly the whole of these Islands, and by thunderstorms in many parts of Great Britain. The temperatures registered during the closing fortnight were mostly above the average, but at the close of the month, when the wind shifted to the Northward, a sharp frost prevailed, the sheltered thermometer falling to 25° or less at many northern and central stations.

In March the weather was influenced by an unusually large number of cyclonic disturbances whose centres passed in many cases directly across the British Islands. The general conditions were therefore exceedingly changeable, with a deficiency of warmth and an excess of rainfall in nearly all parts of the Kingdom. At the commencement of the month a strong Northerly and North-easterly wind prevailed over the entire country, and sharp frost was experienced in all but the eastern counties, the sheltered thermometer falling below 20° at several of our northern and central stations, and reaching a minimum of 10° at Balmoral. Snow, sleet or hail was experienced at the same time, and was heavy in some parts of the Midlands

and South of England. A deep cyclonic system which moved south-eastwards along our east coasts on the 9th and 10th occasioned general gales from between S.W. and N.W. with heavy rain in Scotland, and although the weather afterwards became quieter it remained very unsettled, especially in the west and north. In the third week an Easterly to North-easterly wind set in, with snow showers in many districts, and on the night of the 19th a sharp frost was experienced, the thermometer falling below 20° in a few scattered places. Towards the close of the month the weather became milder, and on the 24th the thermometer in some parts of Norfolk and Suffolk rose slightly above 60°. No improvement was, however, reported in the general conditions. Heavy rain fell in Scotland, Wales and the West of England on the 24th or 25th, and at the close of the month a gale from the South-westward prevailed on nearly all our coasts.

For the quarter as a whole the *mean temperature* was below the average, the deficit being slight as a rule but rather large in the two southern districts, England South-east and South-west (including South Wales). In the eastern and south-eastern counties the highest temperatures of the quarter were recorded on March 24th, when the thermometer in some places rose to 60° or slightly above it. In other districts the readings at this time were not much above 55°, and were practically no higher than those observed more than once in January and February. The lowest temperatures of the quarter occurred either between January 3rd and 5th or between January 10th and 13th, the two sharp frosts being separated by an interval of exceedingly mild weather. On the earlier occasion the sheltered thermometer fell to between 15° and 20° in many places, and to 10° at Balmoral, West Linton and Raunds; during the frost which occurred a few days later readings below 20° were again reported rather commonly, the thermometer sinking to 10° at Rauceby, and to 11° at Rothamsted and Llangammarch Wells. Between January 3rd and 5th there were many places in which the thermometer remained below the freezing point throughout the day; at Woburn on the 4th and Bettws-y-coed on the 5th the maximum reading was as low as 27°, while at Balmoral the thermometer on the 3rd did not rise above 20°.

The *rainfall* of the quarter varied considerably in amount in different parts of the country. In London and in the east and north-east of England the aggregate was in close agreement with the average. Most other districts reported a deficiency, amounting to as much as 26 per cent. in the English Channel and to 16 per cent. in England South-west. The number of days with rain was not widely different from the normal excepting in England North-west, where the total of 57 was 6 in excess of the average. The heaviest individual falls (consisting in many cases largely of melted snow) occurred on January 6th–7th in many parts of Great Britain, on January 15th–16th and 26th–27th, mainly in the western districts, on February 16th on the shores of the Bristol Channel, on March 8th–9th in Scotland, and on March 24th–25th in Scotland and a few isolated parts of Wales and the West of England. On each of these occasions amounts exceeding an inch in 24 hours were recorded in the districts mentioned.

The *duration of bright sunshine* in London amounted to 197 hours, and was only 7 hours below the normal. In England North-east, South-east and South-west the agreement with the average was still closer, but in the eastern and midland counties there was a rather large deficit, while in England North-west there was a substantial excess. The dullest weather occurred in the third week in February; the brightest in the third week in January, when some stations in the east and south-east of England recorded more than half the possible amount.

Deaths.

The deaths registered in England and Wales last quarter numbered 156,359, and were in the proportion of 17·7 annually per 1000 persons living; this rate is 0·8 per 1000 below the mean rate in the ten preceding first quarters. In registration counties with populations exceeding 100,000, the death-rates ranged from 14·0 in Middlesex, 14·2 in Essex, 14·7 in Kent, 15·3 in Leicestershire, 15·4 in Northamptonshire, 15·7 in Sussex, and 15·9 in Dorsetshire, to 19·6 in Denbighshire, 19·8 in Lancashire, 20·0 in Glamorganshire, 20·3 in Cumberland, 22·0 in Carmarthenshire, and 22·8 in Monmouthshire.

The 156,359 registered deaths included 79,169 of males and 77,190 of females, the death-rate among males being 18·6, and that among females 16·9, per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding first quarters, the death-rate of males showed a decrease of 0·9, and that of females a decrease of 0·8 per 1000 living. Out of equal numbers living, the deaths of males were to those of females as 110 is to 100; the mean proportion in the first quarters of the ten preceding years having been 111 to 100.

*Urban and Rural Mortality.**

In 76 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1908 is estimated at about sixteen and a quarter millions, the death-rate was 17·9 per 1000 living, or 0·2 above the death-rate of the whole country. The rates in the several towns ranged from 9·8 in Hornsey, 11·8 in East Ham, 12·6 in Walthamstow, 12·8 in Leyton and in Kings Norton, 13·3 in Tottenham, 13·6 in Northampton, 13·7 in Willesden, and 13·8 in West Hartlepool, to 22·0 in Sunderland, 22·5 in Hanley and in Swansea, 22·6 in Rhondda, 23·2 in Merthyr Tydfil, 23·4 in Bootle and in Oldham, and 24·2 in Liverpool.

In 142 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at nearly five millions, the death-rate was 17·1 per 1000 living, or 0·8 per 1000 below the rate in the great towns.

In the remainder of England and Wales, with an aggregate population estimated at more than fourteen millions, of whom nearly six and a half millions live in small towns, and more than seven and a half millions in rural districts, the death-rate was 17·8.

Mortality at Different Ages.

Of the 156,359 deaths registered last quarter, 29,498 were those of infants under one year of age, 67,259 those of persons aged between one year and sixty years, and 59,602 those of persons aged sixty years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was equal to 123 per 1000, the average in the ten preceding first quarters having been 137. Among registration counties

---

* It should be noted that the death-rates in these Urban and Rural areas have not been corrected for differences in the sex and age constitution of the respective populations; also that owing to the difficulty of distributing to their proper areas deaths occurring in Institutions, the death-rate in the Rural area may possibly be slightly overstated.

with populations exceeding 100,000, the lowest proportions were 83 in Dorsetshire, 87 in Herefordshire, 91 in Middlesex and in Somersetshire, 92 in Oxfordshire and in Bedfordshire, and 93 in Surrey and in Hertfordshire. The highest proportions were 147 in Cumberland, 150 in Denbighshire, 151 in Durham, 155 in Monmouthshire, 159 in Glamorganshire, and 169 in Carmarthenshire.

In the 76 great towns infantile mortality averaged 124 per 1000 births, being 1 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 67 in Leyton, 73 in Coventry, 84 in Hornsey, in Tottenham and in Huddersfield, 87 in St. Helens, and 91 in Kings Norton; the highest were 164 in Burnley, 175 in Sunderland, 176 in Gateshead, 179 in Warrington and in Rhondda, and 204 in Merthyr Tydfil. Among the 142 smaller towns infantile mortality averaged 125 per 1000 births, ranging from 55 in Penge, 62 in Finchley, 65 in Erith, 69 in Eastbourne and in Ilford, 71 in Hove, 72 in Farnworth, and 73 in Beckenham, to 184 in Shrewsbury, 197 in Keighley, 204 in Aberdare, 207 in Fenton, 208 in Abertillery, and 209 in Stalybridge. Excluding these 218 towns, infantile mortality in the remainder of England and Wales was in the proportion of 121 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 8·5 per 1000 of the estimated population at this group of ages, being 0·6 below the mean rate in the ten preceding first quarters. In the 76 great towns the mean mortality at this age-group was 9·2 per 1000, ranging from 4·6 in Hornsey, 5·2 in Kings Norton, 5·3 in Hastings, and 5·9 in Reading, to 12·2 in Rhondda, 12·4 in Manchester and in Salford, 12·6 in Bootle, 12·9 in Oldham, and 13·6 in Liverpool. In the 142 smaller towns the mortality at this age-group averaged 8·1 per 1000.

Among persons aged sixty years and upwards the mortality was at the annual rate of 91·3 per 1000 of the estimated population at this group of ages; the mean rate in the ten preceding first quarters having been 86·6. In the 76 great towns the mean mortality at this age-group was 97·8 per 1000, the lowest rates being 66·7 in Gateshead, 68·9 in Hornsey, 77·6 in Croydon, 79·4 in Hastings, and 80·2 in Newcastle on Tyne; the highest rates were 121·4 in Oldham, 121·5 in Rochdale, 129·7 in St. Helens, 131·0 in Bootle, and 134·6 in Hanley. In the 142 smaller towns the rate averaged 94·3 per 1000.

Compared with the mean rates in the ten preceding first quarters, the mortality of infants under one year of age showed a decrease of 10·2 per cent., that of persons between one year and sixty years of age a decrease of 6·6 per cent., while the mortality of persons aged sixty years and upwards showed an increase of 5·4 per cent.

Mortality from certain Epidemic Diseases.

The 156,359 deaths from all causes include—

3,804	that were attributed to		whooping-cough,
2,460	„	„	measles,
1,642	„	„	diphtheria,
1,011	„	„	diarrhœa,
792	„	„	scarlet fever,
590	„	„	"fever,"
0	„	„	small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 10,299 deaths were referred last quarter, being in the proportion of 1·17 per 1000 of the estimated population, or 0·21 per 1000 below the average proportion in the corresponding quarters of the previous ten years.

The rate of mortality from whooping-cough exceeded the decennial average, whilst the rates from each of the other diseases were below the respective averages.

Whooping-cough accounted last quarter for 3,804 deaths, and for a death-rate of 0·43 per 1000 annually, which is above the average rate in the ten previous corresponding quarters by 0·06 per 1000. In Herefordshire and in Brecknockshire no deaths from this disease were registered last quarter; among counties with populations exceeding 100,000, the highest death-rates from this cause were 0·63 per 1000 in Glamorganshire, 0·67 in Cumberland, 0·95 in Warwickshire, 1·00 in Durham, 1·11 in Monmouthshire, and 1·48 in Denbighshire. In the 76 great towns, whooping-cough caused an average death-rate of 0·50 per 1000 living. No death from this disease occurred in Hornsey during the quarter, and only one each in Great Yarmouth, Coventry and Bury, but the death-rate was equal to 1·32 in Sheffield, 1·36 in Newport (Mon.), 1·56 in Merthyr Tydfil, 1·67 in Aston Manor, 1·86 in Sunderland, and 2·31 in Warrington. In the 142 smaller towns, the average death-rate from whooping-cough was 0·39 per 1000, the disease being especially fatal in Swinton & Pendlebury, Keighley, Cambridge, Morley, Abertillery, and King's Lynn. In the remainder of England and Wales, whooping-cough caused an average mortality of 0·37 per 1000 annually. Among registration sub-districts outside the 218 chief towns, whooping-cough was exceptionally fatal in Fordingbridge, Higham Ferrers, Harwich, Wirksworth, Houghton le Spring, Margam, and Ruabon.

Measles was returned as the cause of 2,460 deaths, corresponding to an annual rate of 0·28 per 1000 of the population, or 0·08 per 1000 below the average rate in the first quarters of the preceding ten years. Of the 55 registration counties, ten were free from measles fatality throughout the quarter. Among counties with populations of more than 100,000, the highest death-rates from this disease per 1000 of the respective populations were 0·38 in Lancashire, 0·44 in Shropshire and in Durham, 0·62 in Monmouthshire, 0·87 in Glamorganshire, and 1·37 in Carmarthenshire. In the 76 great towns measles caused an average mortality of 0·34 per 1000. In 24 of these towns no deaths from this disease were registered during the quarter. The highest death-rates were 1·22 in Willesden, 1·23 in Tynemouth, 1·24 in Salford, 1·36 in Preston, 1·87 in Rhondda, and 2·19 in Stockton on Tees. In the 142 smaller towns, measles was fatal on the average to 0·31 annually per 1000 living, and among these towns showed exceptional fatality in Shipley, Keighley, King's Lynn, Abertillery, and Llanelly. In the remainder of England and Wales the average measles death-rate was 0·20 per 1000. Among registration sub-districts outside the 218 chief towns, measles was especially fatal in Halstead, Newton Abbot, Warsop, Wirksworth, Goole, and Margam.

Diphtheria (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 1,642 deaths, a number corresponding to an annual rate of 0·19 per 1000 living, which is below the average rate in the ten previous corresponding quarters by 0·06 per 1000. In four counties no deaths from this disease occurred last quarter. Among counties with populations exceeding 100,000 the highest death-rates from this disease were 0·25 in Derbyshire, in the North Riding of Yorkshire, in Durham, and in Carmarthenshire, 0·26 in Essex, and 0·36 in Carnarvonshire. The average death-rate from diphtheria in the 76 great towns was equal to 0·20 per 1000 of their aggregate population. No death from this disease occurred in Northampton, Kings Norton, and Tynemouth, and only one each in six other towns. The highest death-rates were, 0·36 in Rochdale, 0·43 in Wolverhampton, 0·46 in West Bromwich, 0·50 in Middlesbrough, 0·53 in East Ham, and 0·80 in Salford. In the 142 smaller towns the mortality from this disease averaged 0·17 per 1000, the rate being highest in Macclesfield, Hindley,

Mansfield, Burslem, and Brighouse. In the remainder of England and Wales, diphtheria was fatal in the average proportion of 0·18 per 1000 living Among registration sub-districts outside the 218 chief towns, diphtheria was especially fatal in Whittlesey, Holt (Norfolk), Humbleyard, Bourne, Staindrop, and Llandebie.

Diarrhœa was the assigned cause of 1,011 deaths last quarter, corresponding to an annual rate of 0·11 per 1000, which is lower by 0·04 per 1000 than the decennial average rate for the first quarter of the year. In seven counties no deaths from diarrhœa were returned last quarter. Among counties with populations exceeding 100,000 persons the highest death-rates were 0·17 in London, 0·18 in Lincolnshire and in Glamorganshire, 0·19 in Staffordshire, 0·20 in Berkshire, and 0·24 in the North Riding of Yorkshire. In the 76 great towns the average death-rate from diarrhœa was 0·14 per 1000; no deaths were returned in ten of these towns; the rate was highest in the following towns :—Stockton on Tees and Rhondda 0·30 per 1000 respectively, Burnley 0·31, Reading 0·34, Oldham 0·42, and Middlesbrough 0·54. In the 142 smaller towns diarrhœa was fatal on the average to 0·11 per 1000 of the population, and caused the highest mortality in Abertillery. In the remainder of England and Wales the death-rate from diarrhœa averaged 0·09 per 1000.

Scarlet fever accounted last quarter for the deaths of 792 persons, equal to a rate of 0·09 per 1000 living, or 0·03 per 1000 less than the decennial average rate for the first quarter. Nine of the counties of England and Wales were free from scarlet fever mortality throughout the quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·13 in Staffordshire, 0·14 in Lancashire, 0·15 in Warwickshire, 0·16 in London and in Cheshire, and 0·20 in Middlesex. In the 76 great towns scarlet fever accounted for an average mortality of 0·12 per 1000 annually. No deaths from this disease were recorded in 20 of these towns. The highest scarlet fever death-rates were 0·27 in Burnley, 0·28 in Warrington and in Salford, 0·34 in Oldham, 0·35 in Smethwick, and 0·40 in West Bromwich. In the 142 smaller towns scarlet fever was fatal in the average proportion of 0·08 per 1000 living, and caused the highest mortality in Hyde. In the remainder of England and Wales this disease caused an average death-rate of 0·06 per 1000 living. Among registration sub-districts outside the 218 chief towns, scarlet fever was exceptionally fatal in Cheriton Fitzpaine and in Aughton.

"*Fever*" (including the three chief forms—*typhus*, *enteric fever*, and '*pyrexia*' of uncertain origin) was the registered cause of 590 deaths last quarter, equal to an annual death-rate of 0·07 per 1000 of the population, or 0·04 per 1000 less than the average rate in the first quarters of the previous ten years. In seven counties no deaths from fever were returned last quarter; among counties with populations exceeding 100,000, the highest death-rates were 0·11 in Norfolk, 0·12 in Lancashire, 0·13 in Nottinghamshire, 0·14 in Monmouthshire, 0·16 in Carmarthenshire, and 0·43 in Cumberland. In the 76 great towns fever caused an average mortality of 0·07 per 1000 annually. In thirteen of these great towns no deaths from fever occurred; the towns with the highest fever death-rates were Hanley, Norwich, Preston, Middlesbrough and Salford, in which the rates ranged from 0·24 to 0·28 per 1000. In the 142 smaller towns fever caused an average mortality of 0·09 per 1000 annually, the mortality being highest in Barnsley and in Workington. In the last-named town the death-rate from this cause was equal to 4·01 per 1000 annually. In the remainder of England and Wales, the death-rate from fever averaged 0·06 per 1000. Among registration sub-districts outside the 218 chief towns, fever was especially fatal in Cirencester.

No death from *small-pox* was registered last quarter in any part of England or of Wales. The deaths in the four quarters immediately preceding numbered 4, 5, 0 and 0 respectively.

Violent Deaths.

The deaths in England and Wales referred to different forms of violence, either accidental or otherwise, numbered 5,481 last quarter, and corresponded to an annual rate of 0·62 per 1000 of the population, which was equal to the average in the ten preceding first quarters. In registration counties with populations exceeding 100,000, the lowest death-rates from violence were 0·34 in Berkshire, 0·37 in Dorsetshire, 0·38 in Carnarvonshire, and 0·40 in Kent, in Buckinghamshire, in Wiltshire, and in Lincolnshire; the highest rates were 0·75 in Staffordshire, 0·76 in Shropshire, 0·77 in Denbighshire, 0·94 in Monmouthshire, and 0·95 in Glamorganshire. In the 76 great towns the mean rate was 0·65 per 1000 living; among the several towns the rate was only 0·17 in Bournemouth, 0·18 in Smethwick, 0·21 in Northampton, 0·23 in Warrington, and 0·24 in Hastings and in Handsworth (Staffs.); but it rose to 0·96 in Liverpool, 1·05 in Rhondda, 1·09 in Merthyr Tydfil, and 1·23 in Swansea.

Certification of Causes of Death.

Of the 156,359 deaths registered in England and Wales last quarter, the causes of 143,353, or 91·6 per cent., were certified by registered medical practitioners, and the causes of 10,571, or 6·8 per cent., by coroners after inquest; whilst the causes of the remaining 2,435, or 1·6 per cent., were not certified, the average proportion of uncertified deaths in the ten preceding first quarters having been 1·9 per cent. Among registration counties with populations exceeding 100,000, the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Hampshire, Middlesex, Buckinghamshire, Cornwall, Gloucestershire, Cheshire, the East and North Ridings of Yorkshire, Monmouthshire, and Glamorganshire, but it reached 3·2 in Carnarvonshire, 3·3 in Derbyshire, 3·6 in Durham, 3·7 in Warwickshire, and 4·0 in Cumberland. In the 76 great towns the mean proportion of uncertified deaths was 1·0 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, East Ham, Walthamstow, Hastings, Bournemouth, Southampton, Ipswich, Great Yarmouth, Plymouth, Devonport, Derby, Wigan, Oldham, York, Newport (Mon.), or Cardiff, the proportion per cent. rose to 4·1 in St. Helens, 4·3 in Birmingham, 4·4 in Gateshead, and 5·8 in South Shields.

Inquests.

Inquests were held in England and Wales concerning 10,571, or 6·8 per cent., of the total deaths, the mean proportion in the ten preceding first quarters having been 6·5 per cent. In the 76 great towns the proportion of inquest cases averaged 8·1 per cent., ranging from 0·9 in Reading, 1·6 in Warrington, 2·1 in Northampton, 3·0 in Barrow-in-Furness, and 3·4 in Gateshead, to 10·7 in Cardiff, 10·8 in Hull, 11·6 in Derby, 12·2 in Southampton, and 12·7 in Tottenham.

Deaths in Public Institutions.

The total deaths registered in England and Wales include 29,162, or 18·6 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding first quarters having been 16·1 per cent. In the 76 great towns the deaths in public institutions averaged 25·2 per cent. of the

total deaths, the lowest percentages in the several towns being 3·7 in Rhondda, 7·2 in Kings Norton, 7·3 in Handsworth (Staffs.), and 7·8 in Gateshead; the highest percentages being 26·2 in Birmingham, 26·7 in Manchester, 27·0 in Salford, 27·5 in Walthamstow, 29·9 in West Ham, 32·7 in Liverpool, and 38·1 in London.

Edinburgh, Glasgow, Dublin, and Belfast.

The annual rates of birth and death per 1000 living in these towns last quarter were as follows :—

	Birth-rate.	Death-rate.
Edinburgh	20·2	18·1
Glasgow...	28·1	23·0
Dublin	29·0	25·5
Belfast	30·2	26·6

Colonial and Foreign Cities.

The Registrar-General has been favoured with returns of vital statistics by the authorities of 28 of the principal Colonial and Foreign Cities. From these a summary has been constructed for the past quarter (Table XIII.). Excluding the Indian cities, the highest and lowest annual rates of birth and death during the first quarter of 1908 were as follows :—

Birth-Rates.

	Highest per 1000 living.		Lowest per 1000 living.
Trieste	36·0	Brussels	18·6
Toronto	30·9	Paris	19·4
St. Petersburg	30·9	Prague	22·7
Bucarest	30·6	Vienna	23·4
Breslau	30·4	Antwerp	23·5
New York	29·7	Berlin	23·5
		London ... 26·9	

Death-Rates.

	Highest per 1000 living.		Lowest per 1000 living.
St. Petersburg	31·9	Amsterdam	15·0
Moscow	29·9	Antwerp	15·1
Trieste	28·2	Christiania	16·1
Bucarest	25·6	Chicago	16·4
Venice	25·4	Hamburg	16·6
New Orleans	23·5	Stockholm	16·9
Prague	23·1	Berlin	16·9
		London ... 17·0	

Small-pox caused 260 deaths in Rio de Janeiro, 137 in Moscow, 51 in St. Petersburg, and 4 each in Paris and in New Orleans.

Measles was most fatal, in proportion to population, in St. Petersburg, Trieste, Brussels and Vienna; *scarlet fever* in Moscow, St. Petersburg, New York, Bucarest and Budapest; *diphtheria* in Toronto, St. Petersburg, New York, Moscow and Christiania; *whooping-cough* in Copenhagen, St. Petersburg, Amsterdam and Prague; "*fever*" in St. Petersburg, Philadelphia, Budapest, Moscow and Prague; and *diarrhœal diseases* in St. Petersburg, Moscow, Munich, Breslau and Prague.

Infantile Mortality.—Among those European cities for which the figures are available, the proportion of deaths of children under one year of age to 1000 registered births ranged from 84 in Stockholm, 90 in Amsterdam, 98 in Paris and 99 in Christiana to 187 in Trieste, 192 in Prague, 200 in Vienna, 223 in Bucarest and 240 in Venice.

INDIAN CITIES.—The death-rate was equal to 37·2 per 1000 in Calcutta, 39·4 in Madras,, and 46·7 in Bombay. *Small-pox* caused 393 deaths in Bombay, 163 in Calcutta, and 7 in Madras; *measles* caused 314 deaths in Bombay, 83 in Calcutta, and 32 in Madras. Under the heading "*fever*" 2,836 deaths were returned in Bombay, 2,220 in Calcutta, and 1,354 in Madras, including 1,919 and 496 deaths from *plague* in Bombay and Calcutta respectively. The mortality from *diarrhœal diseases* was excessive in all of these Indian cities; *Asiatic cholera* caused 1,360 deaths in Calcutta, 119 in Madras, and 7 in Bombay.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the first quarter of the year 1908 (*see* pages xxvii—xxxii); and in the two following Tables, these numbers have been reduced to rates per 1000 living in the several populations (*see* pages xxxiii—xxxviii).

TABLE V.—**76 Great Towns.—Population; Births, Deaths, and Meteorology in the 13 Weeks ended 28th March, 1903.**

NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The deaths in London have been corrected as far as possible (1) by excluding deaths of all non-Londoners, and (2) by including the deaths of Londoners occurring in Metropolitan Public Institutions situated outside the County. (See Table XII.) The deaths in the other towns have been corrected, as far as possible, for deaths occurring in Public Institutions; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been credited to the respective areas to which they belong.

TOWNS.	ESTIMATED POPULATION in the middle of 1903.	BIRTHS.	DEATHS.	The DEATHS registered include: Deaths of: Infants under 1 Year of Age.	Deaths of: Persons aged 60 Years and upwards. [a] Phœnix Park.

[b] Fitzwilliam Square.

NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The death-rate in London has been corrected as far as possible (1) by excluding deaths of all non-Londoners, and (2) by including the deaths of Londoners occurring in Metropolitan Public Institutions situated outside the County. (See Table XII.) The death-rates in the other towns have been corrected for deaths occurring in Public Institutions; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been credited to the respective areas to which they belong. Of the deaths excluded from London in 1905, only those which occurred in the London Fever Hospital, the Metropolitan Asylums Hospitals, and the Middlesex County Lunatic Asylum were added to the several parts of the Outer Ring.

TABLE VII.—**One hundred and forty-two smaller Towns.—Population; Births and Deaths** in the QUARTER ended 31st March, 1908.

NOTE.—The 142 Smaller Towns are those with populations of 20,000 but not exceeding 50,000 at the Census of 1901. The deaths in these towns have been corrected for deaths occurring in Public Institutions, while in addition the deaths occurring in London of all persons known to belong to towns in the Metropolitan Outer Ring have been credited to the several towns to which they belong.

TOWNS	ESTIMATED POPULATION IN THE MIDDLE OF 1908.	BIRTHS.	DEATHS.	The DEATHS registered in the Quarter include														TOWNS.
				Deaths of		DEATHS from												
				Infants under 1 Year of Age.	Persons aged 60 Years and upwards.	Principal Epidemic Diseases.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhœa.	Violence.	Inquest Cases.	Deaths in Public Institutions.	Uncertified Causes of Death.	Deaths under 1 year to 1000 Births.

* This table is supplied by the Medical Officer of Health of the Administrative County of London, and is compiled from returns which the London County Council receives from the Metropolitan Asylums Board under section 55 (4) of the Public Health (London) Act, 1891.

† The notification of Cerebro-spinal fever was made compulsory in the Administrative County of London on the 12th March, 1907.

‡ The cases notified in the Borough of Hackney relate to the area as constituted previous to 1st April, 1908. The estimated population in the middle of 1908 of the area as thus constituted is 235,294.

TABLE X.—PROPORTION to POPULATION of CASES of INFECTIOUS DISEASE NOTIFIED in certain LARGE TOWNS of ENGLAND and WALES during the 13 Weeks ended 28th March, 1908.

TOWNS.	Annual Rate per 1,000 Persons living.									
	Total Cases.	Small-pox.	Scarlet Fever.	Diphtheria (including Membranous Croup).	Typhus.	Enteric Fever.	Continued Fever.	Cholera.	Erysipelas.	Puerperal Fever.

The *Registration Districts*, 634 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

[a] See page 2, note [b].

[b] For London, the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrars.

II.—SOUTH EASTERN COUNTIES.—Registration Districts.

No.	Registration Districts.	Area in Statute Acres.	Enumerated Population, 1901.	Marriages: Registered in Quarter ended 31 Dec. 1907.	Births: Registered in Quarter ended 31 Mar. 1908. [a] The *Registration Sub-districts* (2028 in number) are sub-divisions of the *Registration Districts* in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; *F* a Hospital for Infectious Diseases; *H* another Hospital; and *L* a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

[b] See page 2, note [b].

[c] See page 6, note [b].

[a] 618 : 2.—Of the 27 deaths from whooping-cough 15 belonged to the parish of Rhosllanerchrugog and 9 to the parish of Cefn.

[b] 618 : 3.—Of the 21 deaths from whooping-cough 6 belonged to the Borough of Wrexham and 12 to the parish of Broughton.

[c] 622 : 2.—The 4 deaths from whooping-cough belonged to the parish of Llangollen Rural.

[d] 627 : 1.—The 3 deaths from whooping-cough belonged to the parish of Llanllyni.

[e] 627 : 3.—The 5 deaths from diphtheria, 3 of which were registered during March, belonged to the Borough of Carnarvon; between the 1st and the 18th April 2 more deaths from this disease were registered in the sub-district.

CHANGES IN REGISTRATION DISTRICTS AND SUB-DISTRICTS IN THE QUARTER ENDED 31ST MARCH, 1908.

Changes in Registration boundaries are made by order of the Registrar-General, with the consent of the Local Government Board. Those changes which affect the boundaries of Registration Districts are necessitated by changes in the boundaries of Poor Law Unions.

METEOROLOGY.

Remarks on the Weather over the United Kingdom during the Quarter ended March 31st, 1908.

EXTRACTED FROM THE

MONTHLY WEATHER REPORTS

OF THE

METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 170 STATIONS,

TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 56 STATIONS IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

JANUARY, 1908.

Pressure, Winds and Weather.—The general distribution of pressure during January was of an anticyclonic type, the barometer being above 30 ins. in some part or other of the country on nearly every day, and the mean results for the period were in all cases above the average, the excess ranging from 0·08 in. in Shetland to 0·17 in. at Oxford and Roche's Point. On the 2nd, 11th, 21st, 24th and 26th the barometer rose to 30·5 ins. or above in various localities, 30·63 ins. at Clacton-on-Sea and at Oxford. The weather conditions, however, were not of such a quiet character as would be inferred from the prevalence of high pressure. The winds and weather over these Islands were frequently related to extensive disturbances with centres passing between Iceland and Greenland, so that there were several instances of local gales of considerable strength.

The general features of the month may be divided roughly into two parts—the first half mainly fair and very cold, but with sudden and great fluctuations of temperature, the remainder mostly very dull and rather more changeable, with comparatively slight variations of temperature. On New Year's day a depression on the Bay of Biscay, which had occasioned a very boisterous and keen Easterly type of conditions in the closing week of December, was transferred to Portugal, and the British Isles came under the western extension of an anticyclone which embraced the greater part of Europe. Temperature immediately began to decline, and a severe frost quickly spread over practically the entire Kingdom. By the morning of the 2nd shade temperatures of 20° or less were being recorded in various places, and from the 3rd to the 6th readings below 20° were numerous, in England, Ireland and Scotland, as low as 10° at Balmoral, West Linton and Raunds, 11° at Kilmarnock and Stokesay, 12° at Hereford and Birr Castle, and 13° at Thornton Hall, Colmonell, Newton Rigg, Belvoir Castle, Cirencester, Epsom, Swarraton and Llangammarch Wells. Afternoon maxima below 30° occurred in several neighbourhoods, 28° at Glasgow, Newton Rigg and Reading, 27° at Woburn and Bettws-y-Coed, and 20° at Balmoral. On the 5th, however, the approach of an Atlantic disturbance brought about a shift of wind to South or South-West and a very rapid rise of the thermometer in the west; the change at Birr Castle amounted to 40° in the course of the day. Early next day there was a rapid thaw all over Britain, preceded by a "glazed frost" in London and some other localities. Temperature rose 30° to 37° in places, the afternoon values in many parts of the Kingdom being from 50° to 55°.

The depression which brought about this great change was one of the two important disturbances of the month. On the morning of the 6th its centre was a little northward of the Hebrides. It passed rapidly across the Orkneys on an easterly course at about 40 miles an hour. The barometer fell to 28·83 ins. at Sumburgh Head in the afternoon, and on the following morning the centre was already over the Baltic Provinces of Russia, quickly disappearing by evening beyond Moscow. During its passage it occasioned a South-Westerly to North-Westerly gale over our northern districts, the force of a strong gale being recorded at Castlebay, Aberdeen and Wick. At a few western and north-western stations the rainfall was from 1 in. to 1·6 in. As this gale was abating a new and deep cyclonic system appeared over Ireland on the morning of the 7th. It also advanced along a general easterly path, but at a much slower rate of progression, about 14 miles per hour during the first two days. It passed away finally across south-eastern Russia. When the minimum of pressure was over eastern England on the morning of the 8th the barometer fell to 28·78 ins. at Clacton-on-Sea. The progress of the system was marked by Westerly to Northerly or North-Easterly gales in many places, the force of a strong gale being reached at Scilly, Jersey and Dungeness, and a whole gale along the north-east of Ireland. A mean hourly velocity of 55 miles of North-Westerly wind was registered by the anemometer at Scilly about midnight on the 7th. In the bad weather which prevailed on this occasion over the country generally, heavy and continuous rain fell on the

7th, and early next morning changed to sleet or snow over a considerable area. The rain and melted snow measured on the morning of the 8th exceeded an inch at many stations, ranging up to 1·8 in. at Carrigallen (Leitrim), 1·9 in. at Epsom, and 2·1 ins. at Heathfield (Sussex). The depth of snow still lying on the ground when the gauge was examined was 8 ins. at Heathfield, 4 ins. at Epsom, and 3 ins. at Tonbridge and Rauceby.

With the departure of the disturbance a high pressure area of moderate intensity moved down upon us from the Iceland region, its central space lying over the British Isles on the 10th, then passing on to the Continent. Its advent was marked by another severe frost, and from the 10th to the 13th temperatures below 20° were again commonly experienced. 10° at Rauceby, 11° at Rothamsted and Llangammarch Wells, and 13° at Stokesay and Raunds. On the 13th a disturbance beyond Iceland brought the wind into Southerly directions in these Islands, and a thaw set in, but at a more gradual rate than in the previous case. It was complete by the middle of the month.

During the remainder of the period under review there was no well-defined type; the conditions were indifferently influenced by anticyclones to the east, south-east or south of us, and by far-distant northern depressions. From time to time, therefore, local South-Westerly, to North-Westerly gales were felt on the western and northern coasts, a strong gale at Stornoway on the 12th and 31st, at Malin Head on the 13th, 16th and 27th, at Castlebay on the 17th and 27th, at Wick on the 30th and 31st, and at Sumburgh Head on the 31st, while on the 28th Malin Head had a whole gale. The anemometrical registers show a mean hourly velocity of North-Westerly wind of 53 miles an hour at Scilly on the 28th, and 51 miles at Peerness on the 31st. No frost of any importance occurred in the second half—the weather was very mild on the 16th and 17th, and again on the 26th and 27th. there being on both occasions numerous night minima above 45°, as high as 50° at Tottenham, and 51° at Dublin and Valencia on the 16th or 17th, and 50° at Valencia and Roche's Point on the 27th. Many of the afternoon maxima were from 55° to 57°. During these warm days large falls of rain were measured locally in the west and north-west, the largest 1·6 in. at Gruline (Mull), and 2·1 ins. at Caragh Lake (Kerry) on the 15th, 1·2 in. at Gruline, and 2·3 ins. at Caragh Lake on the 16th. 1·2 in. at Killybegs on the 26th, and 1·2 in. at Graythwaite on the 27th. Snow or hail showers fell in many localities, nearly all unimportant, but on the 29th the snow lay to a depth of 3½ inches at Ardross Castle and Tealby. There was an almost entire absence of thunderstorms, but on the 28th Jersey, Prestwich, Laudale and Broadford (Clare) were visited, and on the same day the ancient church of Parracombe, North Devon, was extensively damaged by lightning; on the following day there was a thunderstorm at Guernsey.

The dull weather of the second half was largely due to the prevalence of mist or fog, more especially over England, the fog at times being dense and lasting. On the coasts of Ireland and Scotland fog was very rarely reported, while along the west, south and east of England it was of frequent occurrence, daily from the 14th to the 26th. On some days it was very thick and persistent, and extended across the English Channel and along the Continental coasts from France to Denmark and Norway, and resulted in great delays to shipping, and some casualties.

Sea surface temperature records show that the coastal waters were warmer than the air on shore, to the extent of about 2° on the east coast of Britain, 2° to 3° on the far western and northern coasts, and 4° or 5° in the western part of the English Channel and thence up to the Irish Sea.

Rainfall.—There was a deficiency of precipitation over the eastern, inland and south-western districts of England and in the English Channel; elsewhere the distribution was irregular. At several south-western stations the amounts were from 2 ins. to 2·8 ins. below the average, while Blacksod had an excess of 3·2 ins. The largest aggregates were 11 ins. at Fort William, 10·4 ins. at Glencarron, and 9 ins. at Gruline; the smallest, 0·6 in. at Bawtry and Lowestoft, and 0·5 in. at Geldeston and Blakeney Hill (Forest of Dean). The falls of an inch or more in a day were fairly numerous for the season, the largest being chiefly at rainfall stations already referred to but not included in the tables. Rain fell at Balta Sound on 28 days, and at Sumburgh Head on 27 days, against 8 days at Kew and Portsmouth and 7 at Westminster and Tottenham.

Bright Sunshine.—The duration of sunshine was generally above the average, by 40 hours at Tunbridge Wells and Ventnor. At Manchester the month's total was only 8 hours (3 per cent. of the possible duration), and at Balta Sound 11 hours (6 per cent.), while in the south the totals ranged up to 90 hours or more, 98 hours at Ventnor (38 per cent.) and Rhyl (40 per cent.), and 99 hours (38 per cent.) at Totland Bay.

FEBRUARY, 1908.

Pressure, Winds and Weather.—The atmospheric conditions over the British Isles during the month of February were of a somewhat abnormal character. This resulted from the remarkable persistency of an extensive system of high pressure which embraced the Middle Atlantic region, Western Europe and the greater part of these Islands. Only on the 12th and 13th was the area of maximum pressure temporarily removed to the inland districts of the Continent, away from the sea beyond our south-western coasts. On several

days in the first fortnight the barometer was above 30·5 ins. at a number of stations in this country, and from the 4th to the 7th it exceeded 30·75 ins. in Ireland and south-western England, amounting to 30·86 ins. at Valencia on the evening of the 6th. As was the case in January, the central spaces of nearly all the cyclonic systems were again found in the neighbourhood of the Arctic Circle, between Greenland and Northern Scandinavia, but about the middle of the month two depressions passed north-eastward between Shetland and the Faeröe, and later two moved down the North Sea. In the last two disturbances the barometer fell below 29 ins. at some Northern stations, at Sumburgh Head to 28·17 ins. on the 22nd, and to 28·69 ins. on the 28th. The steady prevalence of high pressure to the south-west, and of low pressure to the north-east is reflected in the general results for the month, the barometer values showing an excess of 0·31 in. at Valencia, 0·28 in. at Scilly, and 0·26 in. at Roche's Point, diminishing north-eastward to a deficiency in the north-east of Scotland, of 0·01 in. at Nairn, 0·03 in. at Aberdeen, 0·06 in. at Wick, and 0·13 in. at Sumburgh Head. The mean gradient was thus very largely increased—normally it is 0·23 in. between Jersey and Shetland, but on this occasion it amounted to 0·62 in. over the same distance. A similarly interesting feature is disclosed in the extreme range of pressure, which varied from 1·3 in. at Valencia to 2·3 ins. at Sumburgh Head.

From these facts it is obvious that the distribution of barometric pressure was of a north-westerly type (the normal being south-westerly) all over the kingdom. So unusually steady was the type that there were hardly any records of winds to the eastward of north or south. It will be gathered from the unusual steepness of the gradient that the period under review was very windy. Although the centres of most of the disturbances were far away to the northward the influence of the systems extended over a very wide area, so that the wind frequently rose to a gale on some part or other of our coasts—on at least 17 days—but in the first half of the month the only strong gale (North-Westerly) was in Shetland, on the 8th. The depression which appeared near the north-western coasts on the evening of the 14th, and subsequently passed on to Norway, did not occasion a strong gale anywhere. It is worthy of note that as the centre passed near Stornoway the barometer fell 0·08 in. in one hour, then rose 0·19 in. in an hour. The weather had been mainly fine, dry and sunny up to the 14th, but on the 15th it underwent a most decided change, gales and rain, hail, sleet or snow occurring nearly every day. There were, however, very few instances of precipitation amounting to an inch on any one day; the largest amounts were 1·3 in. at Swansea and 1·6 in. at Arlington on the 16th, 1·4 in. at Glencarron on the 21st, and at Ardross Castle on the 29th, when 1·3 in. fell at Dunrobin Castle.

On the morning of the 17th a disturbance was indicated to the westward of the Hebrides. Like its immediate predecessor it went on to Norway, causing a gale in various parts of the country, but only Roche's Point had the force of a strong gale (North-Westerly), on the 17th and 18th.

A deep cyclonic system which appeared on the evening of the 21st off the south of Iceland brought about the most tempestuous conditions of the season over the land. The disturbance, moving on a due easterly course, made slow progress, the rate of translation being 15 miles per hour up to the evening of the 23rd, when it was near the Norwegian coast, thence southward to the Dutch coast at 19 miles an hour, afterwards crossing Germany and dispersing near St. Petersburg in the night of the 26th. Almost as soon as the depression was indicated off Iceland the Westerly wind increased to a gale or strong gale on our north-western coasts. As the system approached pressure gave way rapidly and there was a general backing of the wind, so that on the morning of the 22nd South-Westerly strong winds to strong gales were reported at all our western stations. At Aspatria and Castlebay the barometer fell 0·26 in. in two hours, at the latter station 0·57 in. in five hours, and at Kirkwall 0·5 in. in four hours. By 2 p.m. the minimum pressure, about 28 in., was between the Hebrides and the Faeröe, and at this hour practically the whole of the British Isles had come under the influence of the system, a strong to a whole Westerly to North-Westerly gale raging on the north-western coasts. Inland the gale was at its height between 11 a.m. and noon over eastern Ireland, soon after midday in Wales and the South of Scotland, about 2 p.m. at Hawarden Bridge, Harrogate, Carnforth and Newcastle-on-Tyne, about 3 p.m. at Stokesay, Birmingham, Nottingham and Lincoln, 4·30 p.m. at Norwich and Cromer, and between 5 and 6 p.m. at Southend-on-Sea. The observers generally describe the gale as "great," "severe," "violent," or of "hurricane fury," while over an extensive area it burst to the accompaniment of thunder, lightning, rain and hail. Of the telegraphic reporting stations Castlebay, Malin Head and Donaghadee experienced the force of a whole gale, and Wick a storm, while H.M. Telegraph Ship "Monarch," at Kirkwall, had a whole gale, with squalls of hurricane force, from 4.30 to 9 p.m., and continuing a strong gale until 8 a.m. on the 23rd. Anemometrical registers show a mean hourly velocity of 51 miles in an hour at Kingstown, 52 miles at Southport, 55 miles at Fleetwood, and 59 miles at Deerness, while in the fiercest squalls a velocity at the rate of 81 miles was attained at Holyhead and Southport. For such a gale the casualties at sea were both few and unimportant, but the inland districts suffered severely. Many churches, factories, and other buildings were damaged, involving in some cases loss of life; corn and haystacks overturned, numberless trees uprooted, nearly the whole of the fir trees in one of the avenues on the King's estate at Sandringham were thrown down, and in Donegal a railway passenger train was blown off the rails. In the course of the night the gale abated. At 6 p.m. the pressure difference between Stornoway and Castlebay (90 miles) was 0·41 in., and between Wick and Nairn (60 miles) it was 0·33 in. As the depression moved down the North Sea, on the 24th, the wind veered more Northerly

and again increased, to a strong gale at Malin Head, Roche's Point and Holyhead, a whole gale at Scilly, with squalls at the rate of 74 miles an hour.

Another disturbance appeared over Denmark Strait on the 26th, and following a path round the north of Iceland, it was centred between the Faeröe and Shetland on the morning of the 28th. Then moving down the western side of the North Sea at little more than 10 miles an hour it was between Norfolk and Holland on the morning of March 1st. Its progress was marked by Westerly to North-Westerly gales in many localities, a strong gale at Castlebay, Malin Head, Donaghadee, Roche's Point and Jersey, a storm at Scilly, where a squall with a velocity at the rate of 84 miles an hour was registered on the 28th. Local thunderstorms occurred, but the feature of this gale was the pretty general fall of snow and the coldest weather of the month. On the 27th Ardross Castle had 4 ins. of snow, and next day 6 ins.; Heddon-on-the-Wall on the 27th, and Cardiff on the 29th had 4½ ins., most of the other records being much smaller.

The month's temperature was singularly equable, hardly any of the afternoon maxima touching 55°, while few of the night minima passed below 25°, so that the extreme range was remarkably small—at many inland stations, even, it was only 20° to 25°. This abnormal evenness is markedly reflected in the mean sea-level results, which decrease more or less gradually from south-west to north-east across Ireland, England and Scotland, obliterating the normally colder inland areas.

Fog was experienced on various parts of our coasts on the 2nd, 5th to 7th, and 10th to 14th, but inland it was rarely observed.

From January the change in the temperature of the coastal waters was slight and rather irregular. Over the northern half of the Irish Sea and locally off the east and north-east of Scotland it was somewhat colder, in many places it was practically unaltered, while elsewhere the increase generally was only a degree or two. As a rule, therefore, there was but little difference between the air and the water. Along the south and south-east of England the sea was about a degree colder than the air.

Rainfall.—There was an excess of precipitation over the northern half of the Kingdom, a deficiency over the southern half. Generally, the divergence was moderate, but a few stations in Scotland had an excess of 2 ins. or more, 3·2 ins. at Glencarron, while in southern Ireland some places had a deficiency of 1·9 in., and Roche's Point 2·9 ins. There were few aggregates exceeding 5 ins., but Laudale had 7·5 ins., Gruline 7·9 ins., Fort William 8 ins., and Glencarron 10·3 ins. On the other hand various localities had less than an inch, Cheltenham and Reading 0·75 in., Worcester Lodge, Forest of Dean 0·7 in., and Dundee 0·6 in. Several northern and north-western stations had precipitation on every day, the frequency ranging downward to between six and ten days locally in Gloucestershire.

Bright Sunshine.—There was a deficiency of sunshine over Ireland, the western half of England and the extreme eastern counties, and in the north of Scotland, an excess elsewhere. In general the differences were not large, but Woolacombe lost 26 hours, Valencia and Scilly 25, while Edinburgh gained 28, and Aberdeen 34 hours. A notable feature in the month is seen in the largest sunshine totals being in the north-east, 101 hours at Crathes, 106 at Aberdeen, 111 at Cockle Park, Morpeth, and 112 at Balruddery, all other stations returning 95 hours or less, 23 hours at Hull, and 21 at Balta Sound.

MARCH, 1908.

Pressure, Winds and Weather.—The very deep cyclonic system which moved down the North Sea, near the east coast of England, in the closing days of February, marked the commencement of a long period of remarkably unsettled atmospheric conditions all over the British Isles. Instead of, as in January and February, keeping well to the northward, near the Arctic Circle, the centres of most of the numerous disturbances of March visited these islands or their immediate neighbourhood, in the majority of cases passing across our Southern districts. Depressions were also rather frequent over the Western Mediterranean, while the Iceland region was practically free until after the middle of the month, and Scandinavia almost entirely free throughout. As a general rule the systems were of no great depth, some of them being "V"-shaped secondaries, but they all served to maintain the weather in a very disturbed state, there being a great prevalence of strong or high winds in all districts, attaining the force of a gale in some locality or other on at least eleven days. Areas of high pressure were usually far removed from our shores, mainly over Northern and Eastern Europe, the barometer rising above 30·9 ins. at Moscow on the 21st. Pressure was also relatively high from the Spanish Peninsula westward to and beyond the Azores, and during the first half of the month it was generally high about Iceland. The only anticyclone that visited the British Isles moved across from west to east on the 14th and 15th, but it was of slight intensity, the barometer rising to 30·27 ins. at Valencia, and to 30·26 ins. at Oxford. A reading of 30·27 ins. was registered at Sumburgh Head on the 25th under the influence of an anticyclone centred near Stockholm. In the absence of any very high readings the range of pressure for the whole month was slight to moderate, from less than an inch on the coast of Kent to 1·7 in. in the north-east of Scotland. At Sumburgh Head the mean pressure was 0·02 in. above the normal, and over the rest of the kingdom it was below the normal, the deficiency nowhere amounting to 0·1 in.

With so many low pressures crossing the country the winds were exceedingly variable in direction, all points of the compass being represented, but the western quarters predominating. The month opened with the North Sea disturbance near the Norfolk Coast, and another forming over the Western Baltic, a well-marked high pressure area covering the Atlantic from Iceland southward. Strong Northerly winds and gales were consequently felt generally over our western districts, a strong gale at Malin Head and Roche's Point. In the course of the day, however, both depressions became less deep, and the wind gradually moderated, the first disturbance passing slowly southward to Spain by the 3rd, while the Baltic system followed an erratic path, crossing the North Sea to Yorkshire, then southward to the Isle of Wight, from thence passing back to the Baltic and dispersing in the night of the 5th near its place of origin. Weather of an inclement character prevailed during this period, rain, hail, sleet or snow falling everywhere, and local thunderstorms occurring in the North of England. As a rule the snow was not very heavy, from one to two inches in places, but at Ardross Castle it was reported as deep, and at Salisbury as a heavy fall, the record at the latter station, however, does not state whether the day's precipitation of 1·3 in. was all yielded by the snow. Temperature was abnormally low, the afternoon maxima in numerous localities failing to reach 40°, Newton Rigg not exceeding 35° on the 1st.

On the morning of the 6th an Atlantic depression, in which the barometer was as low as 29 ins., arrived over St. George's Channel, and moving slowly on a north-easterly course it passed out to the North Sea, where it dispersed in the night of the 7th. Its progress was marked by very boisterous weather, the wind showing a complete cyclonic circulation, and blowing hard, a strong South-Westerly gale at Pembroke, Westerly at Jersey, and North-Westerly at Roche's Point, a whole Westerly gale at Scilly. The anemometrical records show that a mean hourly velocity of 50 miles was reached at Scilly (at the rate of 65 miles in gusts), 51 miles at Plymouth (61 miles in gusts), and 55 miles at Falmouth (73 miles in gusts). Rain was general, and at a few western stations amounts from an inch to 1¼ in. were registered in a day.

With the collapse of this disturbance a new one approached our western coasts. By the evening of the 8th the barometer had dropped below 28¾ ins. in the north-west of Ireland, and on the following morning the pressure minimum, 28·5 ins., the lowest during the month, was over Caithness. From this locality the system altered its course, moved down the east coast of Britain, crossed over to the Low Countries, then pursued a general easterly path, and disappeared towards the Caspian Sea on the 13th. South-Westerly to North-Westerly high winds or gales were felt on nearly all parts of our coasts on the 8th and 9th, a strong South-Westerly gale at Pembroke, and North-Westerly at Malin Head and Roche's Point, a mean hourly velocity of 54 miles (65 miles in gusts) at Falmouth, and at the rate of 68 miles in gusts at Scilly. Rain fell everywhere, as much as 1·4 in. at Landale, and 1·5 in. at Gruline (Mull). Under the influence of the South-Westerly current the afternoon temperature rose to between 55° and 58° in various parts of England and Ireland on the 8th, and in several localities the night minima were from 42° to 45°.

This disturbance was succeeded by a spell of much less windy conditions, the depressions small and of a secondary character, producing frequent rain, hail or sleet, with generally cold weather. Numerous stations registered afternoon temperatures below 40°, as low as 33° at Darwen on the 15th, while on the morning of the 15th there were many night records below 25°, 20° at Belvoir Castle and Woburn, 19° at Cambridge and Oundle, and 18° at Wokingham, where also the same value was touched on the 20th.

On the 22nd the conditions again assumed a more disturbed type, the main depressions for the most part keeping in the Iceland region, but they were sufficiently extensive to affect the British Isles. At Castlebay a strong South-Easterly gale occurred on the 22nd, at Falmouth South-Easterly squalls at the rate of 58 miles an hour were registered, and at Plymouth at the rate of 67 miles. From the 22nd to the 24th was the mildest period of the month, many places having afternoon temperatures above 55°. On the 24th the temperature rose to 60° at Cambridge and Epsom, and to 61° at Cromer and Geldeston A "V"-shaped secondary which moved from west to east on the 24th occasioned heavy rain over a great part of Britain, falls of an inch and upwards being measured at several stations, 1·4 in. at Towyn. From the 27th to the end of the month the type was very unsettled, with frequent rain, and occasional hail, sleet or snow showers, the rainfall at some stations in South Wales and the west of Scotland exceeding an inch in a day. Auroral displays were witnessed in Scotland and North Wales on the nights of the 26th and 27th.

A large depression lying to the southward of Iceland from the 28th to the 30th caused rough weather pretty generally, a strong South-Westerly gale at Stornoway, a whole gale at Malin Head, squalls at the rate of 65 miles an hour at Falmouth, and 58 miles at Plymouth. In the night of the 30th the disturbance moved eastward and the barometer fell below 29 ins. over Scotland. Next morning the centre was over Shetland, the barometer having dropped to 28·67 ins. High winds and gales were general, Pembroke reporting a strong South-Westerly gale, and Aberdeen squalls at the rate of 64 miles an hour. The disturbance passed on to the Norwegian coast and dispersed on the morning of April 1st.

As a rule there was very little fog on land or sea, it occurred along the south-western coasts on the 8th, and along the south and south-east of England on the 24th and 25th.

Many observers remark that the month was wet, cold and windy, bad for farm work, and all vegetation very late.

The temperature of the coastal sea water showed an increase of about 1° on the February values off the south-east of England, and from the Hebrides to Shetland, there was no change on the east coast, from the Firth of Forth to the Shipwash, and on the south coast of Devon, but on the western coasts generally, and off the north-east of Scotland it was about a degree colder. In nearly all localities, however, the water was from 1° to 4° warmer than the air on shore.

Rainfall.—Almost without an exception the records show that precipitation was above the average, the excess amounted to more than 2 ins. at some south-western, western and northern ones, to as much as 2·9 ins. at Marchmont. The largest aggregates were 10 ins. at Gruline, 9·1 ins. at Laudale, 8·6 ins. at Caragh Lake, 7·8 ins. at Fort William, and 7·4 ins. at Mallaranny, against 1·5 ins. at Spurn Head and Felixstowe, and 1·3 in. at Clacton-on-Sea and Shoeburyness. Precipitation, which was frequently in the form of hail, sleet or snow, was measured on 30 days at Caragh Lake, and on 28 days at Sumburgh Head, Cahir and Foynes, but on 14 days at Southend-on-Sea, and on only 9 days in the Forest of Dean (at 200 feet).

Bright Sunshine.—There was an excess of bright sunshine in the Metropolitan area, in the north of Scotland and of Ireland, and on the English Channel, a deficiency elsewhere. Oxford lost 34 hours, but at the other stations the differences from the average were mostly small. At Jersey the total duration was 175 hours, or 48 per cent. of the possible duration, and at Guernsey 170 hours, or 47 per cent. On the other hand Birmingham had 61 hours, 17 per cent., Manchester (Whitworth Park), 56 hours, 15 per cent., and Hull 38 hours, 10 per cent.

TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

Prepared in the Meteorological Office under the direction of W. N. Shaw, LL.D., Sc.D., F.R.S.

In compiling the following Tables (pp. 80 to 89) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South-East; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 13.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

The stations selected, with the names of the Observers, are shown below.

LIST OF STATIONS AND OBSERVERS.

Station.	Observer.	Station.	Observer.
1. LONDON:—		4. ENGLAND, E.:—	
Tottenham ..	J. F. Butler-Hogan, M.D., LL.B., for Urban District Council.	Cromer ..	W. H. Archer, for Urban District Council.
Camden Square	H. Robert Mill, LL.D., D.Sc.	Hillington ..	Rev. H. E. B. Ffolkes, M.A.
Westminster ..	The Meteorological Office.	Norwich .. (Eaton.)	A. W. Preston.
Greenwich ..	The Royal Observatory.	Cambridge ..	R. Irwin Lynch, M.A. The Botanic Gardens.
Norwood ..	W. Marriott.	Bennington ..	Rev. J. D. Parker, LL.D.
Kew	The Kew Observatory (National Physical Observatory).	Clacton-on-Sea	A. W. Shadick, for Urban District Council.
2. ENGLAND, CENTRAL:—		Berkhamsted ..	E. Mawley
Huddersfield	J. Firth.	5. ENGLAND, N.E.:—	
Wakefield ..	A. French, M.R.C.S., L.R.C.P.	Cockle Park .. (*near Morpeth*).	T. B. Hewetson, for the Northumberland County Council.
Belvoir Castle	W. H. Divers, for the Duke of Rutland, K.G.	North Shields	The Meteorological Office.
Coventry ..	E. Hugh Snell, M.D., M.O.H., for the Corporation.	Durham ..	Prof. R. A. Sampson, M.A., F.R.S.
Nottingham ..	Arthur Brown, M.Inst.C.E., and Philip Boobbyer, M.D., M.O.H., for the Corporation.	York	Oxley Grabham, M.A., for Yorkshire Phil. Soc.
Birmingham ..	A. Cresswell, for the Midland Institute Observatory.	Hull	H. B. Witty, for the Corporation.
Oxford	The Radcliffe Observatory.	Spurn Head ..	The Meteorological Office.
Bath	W. H. Symons, M.D., M.O.H., for the Corporation.	Lincoln ..	S. R. Moss, for the Corporation.
Shrewsbury ..	Capt. W. E. Manser, R.E.		
Buxton	W. Pilkington.		
Sheffield ..	E. Howarth. The Weston Park Museum.	6. ENGLAND, N.W., WITH NORTH WALES:—	
Stokesay ..	Rev. W. La Touche, B.A.	Southport ..	J. Baxendell, for the Corporation.
Cheltenham ..	A. C. Saxby, for the Corporation.	Manchester ..	J. Niven, M.A., M.B., M.O.H., for the Corporation.
3. ENGLAND, S.E.:—		Aspatria ..	J. Smith Hill, B.Sc. The Agricultural College.
Salisbury ..	Thos. Challis, for the Earl of Pembroke.	Stonyhurst ..	Rev. W. Sidgreaves, S.J. The Observatory.
Brighton ..	A. Newsholme, M.D., M.O.H., for the Corporation.	Llandudno ..	W. Little, for the Town Council.
Eastbourne ..	S. R. Henderson, for the Corporation.	Liverpool .. (Bidston.)	W. E. Plummer, M.A. Bidston Observatory.
Portsmouth ..	A. Mearns Fraser, M.D., M.O.H., for the Corporation.	Bettws-y-coed	Dr. H. W. Fox, for District Council.
Southampton .	A. Vaughan, for Director General of Ordnance Survey.		
Ventnor ..	Miss Gibson, for Royal National Hospital for Consumption.		

Station.	Observer.	Station.	Observer.
7. ENGLAND, S.W., WITH SOUTH WALES :—		8. THE CHANNEL :—	
Llangammarch Wells.	W. Black Jones, M.D.	Scilly	The Meteorological Office.
St. Ann's Head, Pembroke.	The Meteorological Office.	Jersey	The Meteorological Office.
Portland Bill..	The Meteorological Office.	Guernsey ..	Adolphus Collenette.
Plymouth ..	H. Victor Prigg, A.M.I.C.E., for the Corporation.		
Falmouth ..	The Meteorological Office.		
Woolacombe ..	B. Fanshawe.		
Bristol .. .. (Clifton.)	D. Rintoul, M.A. Clifton College.		

METEOROLOGICAL SUMMARY FOR THE FIRST QUARTER OF THE YEAR 1908, 13* WEEKS TO MARCH 28TH.

* The Summary for "London" is for three calendar months. The "difference from average" is computed from the data for Camden Square, Norwood, and Kew, the averge used being that for the 35 years 1871-1905. A comparison with the averages for 65 years 1841-1905 for the Royal Observatory, Greenwich, is given in the following tables.

For corresponding values for the years since 1878, *see* Appendix I. to the Weekly Weather Report of the Meteorological Office, 1908.

JANUARY, 1908. Station.	Height of Barometer Cistern above M.S.L.	Barometer. Mean Pressure, at 32° F. at Station Level.	Air Temperature. Mean of A Minimum	Mean of B Maximum	Mean of A and B. NOTES ON THE STATISTICAL TABLES.

Hours of Observation.—Observations are made at 8 a.m. and 6 p.m. G.M.T. at telegraphic reporting stations (8 a.m. and 8 p.m. at Oxford), and at 9 a.m. and 9 p.m., mean local time, at normal climatological stations. The names of normal climatological stations are printed in heavy type. Observations are taken at 9 a.m. only at *Brighton, Coventry, Llangammarch Wells* and *Portsmouth*, and at 9 a.m. and 6 p.m. at *Ventnor*. At the telegraphic reporting stations, the names of which are printed in ordinary type, the results given under hygrometer and cloud are based on the morning observations only.

Barometer.—The correction for latitude has not been applied. The values are for station level. They are the means of readings at 8 a.m. and 6 p.m., or at 9 a.m. and 9 p.m. respectively, except in the cases of Brighton, Coventry, Llangammarch Wells, Portsmouth and Ventnor, where they are the means of the observations at 9 a.m.

Rainfall.—The amounts are for the 24 hours commencing at the time of morning observation.

Weather Phenomena.—The number of days of Rain, Snow, Hail, Thunderstorm, Fog and Gale are counted irrespective of the hours at which the phenomena occur. Except in the case of rainfall (see above) the day is the civil day. A day is reckoned as a day of "clear sky," if the mean of the estimates of the "amount of cloud" at the two hours of observation is less than 2, and as an "overcast" day if the mean is greater than 8.

Wind Summaries.—The results given under wind direction, and the number of observations of calms and of fresh or strong wind, are based on the observations at fixed hours taken twice a day. At Brighton, Coventry, Llangammarch Wells, Portsmouth, and Camden Square, where observations of wind (and cloud) are taken only once a day, the observer's results have been multiplied by 2, in order to render them more nearly comparable

with those for other stations. At Ventnor the results are based on observations at 9 a.m. and 6 p.m. (January 3 p.m.). At Falmouth, Kew and Stonyhurst the wind observations are based on the records of a standard Robinson anemometer (factor 2·2). (At Plymouth and Southport the equivalent values are obtained from a Dines Pressure Tube Anemometer.) Velocities of between 13 and 38 miles in the hour have been entered as "fresh or strong winds," velocities of 39 miles in the hour, or above, as gales. *See* a Report by the Director of the Meteorological Office entitled "The Beaufort Scale of Wind Force ... ." Official No. 180.

Averages.—The averages used are—Temperature and Rainfall for the 35 years 1871–1905; Bright Sunshine for the 25 years 1881–1905. The values are published in Appendix III. to the Weekly Weather Report of the Meteorological Office for 1906.

Royal Observatory, Greenwich.—The averages for Temperature and Rainfall, with which the current values are compared, are for the 65 years 1841–1905. The averages for sunshine are for the period 1897–1906. The earth temperatures are taken at a depth of 3 ft. 2 ins. The daily rainfall amounts are those for the 24 hours comprising the civil day. The numbers of days in each month of the quarter which were persistently overcast from midnight to midnight were 3, 0, 1, the number of persistently cloudless days were 2, 0, 0, the number of persistently foggy days were 0, 0, 0.

Mean Values for Districts.—The monthly mean values for districts for temperature, rainfall and sunshine are computed from the data for those stations which are included in the Weekly Weather Report of the Meteorological Office. The selection of stations is not identical with that included in this Report. The district values, as quoted, are comparable with the statistics published in previous issues of the Weekly Weather Report of which a Summary is in course of preparation. The averages with which the current district values are compared are for the 25 years 1881–1905. The district values for amount of cloud and earth temperatures are taken from the Monthly Weather Report of the Meteorological Office.

INDEX OF REGISTRATION DISTRICTS.

The following Index furnishes a reference to the *Number** of each REGISTRATION DISTRICT. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.

Aberayron, 604.
Abergavenny, 582.
Aberystwith, 605.
Abingdon, 115.
Alcester, 397.
Alnwick, 563.
Alresford, 105.
Alston, 568.
Alton, 106.
Alverstoke, 89.
Amersham, 140.

INDEX OF URBAN DISTRICTS

As existing on 31st March, 1908, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked * have been created, and the boundaries of those marked † have been altered since the Census of 1901. The exact constitution of each Urban District and of each Registration Sub-district at the time of the last Census is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,168 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 148 were each co-extensive, at the end of March, 1908, with one or more Registration Areas.

County Boroughs, Municipal Boroughs, and other Urban Districts.	No. of Registration District and Sub-District in which Situated.	County Boroughs, Municipal Boroughs, and other Urban Districts.	No. of Registration District and Sub-District in which Situated.	County Boroughs, Municipal Boroughs, and other Urban Districts.	No. of Registration District and Sub-District in which Situated.

QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, DISTRICTS, AND SUB-DISTRICTS OF

ENGLAND AND WALES;

WITH TABLES SHOWING BIRTHS, DEATHS, AND NOTIFIED CASES OF INFECTIOUS DISEASE IN CERTAIN LARGE TOWNS.

Published by Authority of the Registrar-General.

Printed under the Superintendence of His Majesty's Stationery Office,
AND SOLD BY WYMAN AND SONS, LTD., FETTER LANE, E.C.

No. 238.] **Marriages**—*January, February, March*, 1908. **Births** and **Deaths**—*April, May, June*, 1908. [Price 9*d.*

General Register Office, Somerset House,
27th July, 1908.

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1908 is estimated at 44,539,593 persons; that of England and Wales at 35,348,780, that of Scotland at 4,826,587, and that of Ireland at 4,364,226.

In the United Kingdom 306,037 *births* and 160,895 *deaths* were registered in the three months ended 30th June 1908. The natural increase of population was, therefore, 145,142. The number of *persons married* in the quarter ended 31st March 1908 was 124,662.

The birth-rate in the United Kingdom in the *second* quarter of 1908 was 27·6, and the death-rate 14·5, per 1000 of the estimated population. The marriage-rate in the *first* quarter of 1908 was 11·2 per 1000.

The facts, in detail, concerning Scotland and Ireland, are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Passenger Movement.

According to a Return issued by the Board of Trade it appears that in the three months ended 30th June 1908, the total passenger movement to and from places out of Europe showed a net balance inward of 12,218 passengers, compared with a net balance outward of 110,721 passengers in the corresponding period of the previous year.

3000 Wt 36 8/08 D & S 3 32718

The net outward balance among persons of British origin amounted to 17,321 persons. Of these 12,597 were English, 156 Welsh, 5,121 Scottish, and 5,567 Irish passengers, whilst there was an inward balance of 6,120 British Colonial passengers. Compared with the numbers in the corresponding period of last year the net outward balance of English, Welsh, and British Colonial passengers showed a decrease of 85 per cent., that of Scottish a decrease of 72 per cent., and that of Irish a decrease of 54 per cent.

Among persons of foreign origin there was a net balance inward of 29,539, against a net balance outward of 38,586 in the corresponding period of the previous year.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,028 registration sub-districts of England and Wales in the three months ended 30th June 1908; and the MARRIAGES in 15,676 churches or chapels, in 15,074 registered places of worship unconnected with the Established Church, and in 634 Superintendent Registrars' Offices, in the three months ended 31st March 1908.

Marriages.

In the *first* quarter of 1908 the marriages of 95,022 persons were registered, being equal to an annual rate of 10·8 persons married per 1000 of the estimated population, against an average rate of 11·4 per 1000 in the first quarters of the ten years 1898–1907.

Among registration counties with populations exceeding 100,000, the lowest marriage-rates were 7·6 in Northamptonshire, 8·3 in Essex, 8·6 in Middlesex and in Cambridgeshire, and 8·7 in Hertfordshire, in Buckinghamshire and in Wiltshire; the highest rates were 12·7 in Northumberland, 12·9 in Durham, 13·0 in the North Riding of Yorkshire and in Monmouthshire, and 13·6 in Glamorganshire.

Births.

The births registered in the *second* quarter of 1908 numbered 243,885, and were in the proportion of 27·7 annually per 1000 of the population; this is 1·0 per 1000 below the mean birth-rate in the ten preceding second quarters. In registration counties with populations exceeding 100,000 the lowest birth-rates during the quarter were 21·4 in Sussex, 21·7 in Dorsetshire, 21·8 in Northamptonshire, 22·1 in Carnarvonshire, 22·4 in Devonshire, and 22·5 in Cornwall; the highest rates were 32·3 in the North Riding of Yorkshire, 32·4 in Northumberland, 33·0 in Nottinghamshire, 35·4 in Glamorganshire, 37·4 in Durham, and 37·6 in Monmouthshire.

In 76 great towns the birth-rate averaged 27·9 per 1000, ranging from 15·9 in Hornsey, 17·3 in Hastings, 17·7 in Bournemouth, and 19·4 in Halifax, to 36·6 in Sunderland, 37·3 in Tynemouth, 37·6 in Middlesbrough, 37·9 in Merthyr Tydfil, and 39·9 in Rhondda. In 142 smaller towns the mean birth-rate was 27·0 per 1000, and in the remainder of England and Wales, excluding the 218 chief towns, it was 27·6.

Natural Increase of Population.

The natural increase of population in England and Wales last quarter by excess of births over deaths was 122,563, against 113,624, 111,798, and 111,243 in the second quarters of 1905, 1906, and 1907 respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 32*s.* 6*d.*, 34*s.* 8*d.*, and 33*s.* 2*d.* respectively in the preceding three quarters, was 32*s.* 1*d.* last quarter. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, $4\frac{3}{8}d.$; of prime beef, $7\frac{3}{8}d.$; of inferior mutton, $5\frac{3}{8}d.$; of prime mutton, $8\frac{4}{8}d.$ Compared with the average prices in the preceding three months, the mean prices of inferior beef and of prime beef showed respectively an increase of $\frac{3}{8}d.$ and $\frac{4}{8}d.$, while the mean prices of inferior mutton and of prime mutton showed respectively a decrease of $1\frac{1}{8}d.$ and 1*d.* The average price in the London Market of sea-borne coal put in barge from the collier in the Thames was 17*s.* 2*d.* per ton, against 17*s.* 4*d.* per ton in the second quarter of 1907. The mean price of Consols was 87*l.* 1*s.* 1*d.*, having been 86*l.* 5*s.* 11*d.* in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England, which had been reduced on 19th March to 3*l.*, was further reduced on 28th May to 2*l.* 10*s.* The mean rate during the quarter was 2*l.* 16*s.* 2*d.*

The average number of paupers relieved in England and Wales on the last day of each week in the quarter was 784,651; exclusive of lunatics in county and borough asylums, registered hospitals and licensed houses, of casual paupers, of persons receiving out-door medical relief only, and of patients in the fever and small-pox hospitals of the Metropolitan Asylum District. Of these 784,651 persons, 259,533 received in-door, and 525,118 out-door, relief. The proportion of the population in receipt of poor-law relief was 22·2 per 1000, against 22·3 and 21·9 per 1000 respectively in the second quarters of 1906 and 1907.

Meteorology.

A detailed report, prepared in the Meteorological Office, on the weather over the United Kingdom in the past quarter, with a table of Monthly Results for a number of stations in England and Wales, will be found on pp. 71–89.

With a current of air blowing mainly from polar quarters the weather in the early part of the quarter was extremely cool. Snow and hail showers in the opening week of April were followed by about a fortnight of fair weather, and at the close of the dry period the thermometer for a very short time rose considerably above the average. The spell of warmth was, however, succeeded by a bitterly cold wind from the Northward, and in the week commencing with Easter Sunday (April 19), frosts and snowstorms of phenomenal severity for so late a period in the season, were experienced over nearly the entire Kingdom. By the morning of the 24th, or in some cases, of the 25th, the depth of snow over a large portion of Southern England exceeded 10 inches, and in some parts of the South Midland Counties it varied between 16 and 19 inches. After the 26th the wind shifted to the South or South-East, and the weather became much milder, the rapid thaw (accompanied by considerable falls of rain) resulting in heavy floods in and around the Thames valley.

May opened with a short period of exceedingly warm weather, the maximum shade temperatures on the 1st and 2nd being above 75° in several parts of England and Wales.

On the 3rd, however, the thermometer fell rapidly, and for nearly a fortnight the weather was in a cool and changeable condition, with occasional thunderstorms in most districts. In the second half of May the distribution of barometric pressure was mainly anticyclonic so that the winds were light and variable and the weather fair and dry, the thermometer in the closing week again rising above 75° in many parts of the United Kingdom, and touching 80° at a few isolated places in Scotland and the North of England. Between the 20th and 25th and again between the 29th and 31st the fine weather was interrupted by thunderstorms, and on the 22nd hail was experienced over a large portion of the country.

The early days of June witnessed a prolongation of the thundery weather, and in many places the storms of the 1st, the 3rd and the 4th were of unusual severity, and were accompanied by exceedingly heavy falls of rain. On the night of the 1st a violent squall of wind swept over the eastern parts of the Thames Valley and occasioned a considerable destruction of trees in Bushey Park, while on the afternoon of the 4th a very similar visitation occurred in North Hertfordshire between Bygrave and Luffenall. The thermometer at this time was decidedly high, the shade maxima of the 3rd or 4th being above 80° in many parts of England, and as high as 85° at Whitby and Southampton. The repeated thunderstorms had, however, a marked effect upon temperature, and in the second and third weeks the thermometer was mostly below the average, especially in the northern and eastern districts, where maximum readings of 60° or less were common, The weather, though cool was, however, dry, and in many parts of England no measurable amount of rain was recorded between the middle of the month and the 3rd or 4th of July. Towards the close of the period the thermometer rose decidedly, and between the 28th and 30th readings of 80° and upwards were again observed in several places, the highest values of all being 87° at Poltalloch and Carlisle on the 28th.

For the quarter as a whole the *mean temperature* was below the normal in most districts, the deficiency being greatest in England North-west and South-west. In the eastern parts of the country the mean values were closely in accordance with the average, while in the London district there was a slight excess of warmth. The highest temperatures occurred either at the commencement or at the end of June, on each of which occasions the shade maxima were (as already noted) above 80° in several places. The lowest readings were observed in the closing week of April, mainly on the 24th or 25th, when the sheltered thermometer fell to 20° or slightly below it in many parts of the Kingdom, the readings on the 24th being as low as 9° at Garforth and 10° at Balmoral. Ground frost occurred at various times in May, and also in the middle of June, and as late as the 21st–23rd of that month.

The *rainfall* of the quarter showed an exact agreement with the normal in London, and a very close agreement in England East and North-east. In the Central and South-eastern districts there was a slight excess, and in England North-west a rather large excess, but in the South-west portions of the country (including the Channel district) there was a rather marked deficit.

The number of rain days was in excess of the average in all districts excepting London and the English Channel. The heavy snowstorms of the 25th April yielded amounts of water in the gauge as large as 2·5 at Bucklebury Place, Reading, and 2·2 inches at Salisbury, more than 1 inch being registered on the same date or on the previous day in many parts of Central and Southern England.

In May there were few individual falls of any great weight, but with the thunderstorms which occurred in the opening days of June large amounts of rain (accompanied in many places by hail) were experienced, as much as 2·78 inches being recorded at Cheadle on the 3rd, and more than an inch in several other parts of the country either on that day or on the 4th. At Dover on the latter day as much as 1·14 inch fell in the space of half an hour (between 5.30 and 6 a.m.)

The *duration of bright sunshine* in London amounted to 586 hours and was 40 hours in excess of the normal. A rather decided excess was reported over South-East England generally, but in all other parts of the country excepting England East, the amount was deficient. In the English Channel district the total duration 620 hours, was 10 per cent. below the average.

Deaths.

The deaths registered in England and Wales last quarter numbered 121,322, and were in the proportion of 13·8 annually per 1000 persons living; this rate is 1·8 per 1000 below the mean rate in the ten preceding second quarters, and is the lowest death-rate recorded in any second quarter since civil registration was established. In registration counties with populations exceeding 100,000, the death-rates ranged from 10·8 in Middlesex, 11·0 in Essex, 11·2 in Kent, 11·7 in Northamptonshire and 11·9 in Buckinghamshire, to 15·5 in Cumberland and in Monmouthshire, 15·7 in Glamorganshire and in Denbighshire, 16·4 in the North Riding of Yorkshire, and 18·9 in Carmarthenshire.

The 121,322 registered deaths included 63,168 of males and 58,154 of females, the death-rate among males being 14·8, and that among females 12·8, per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding second quarters, the death-rate of males showed a decrease of 2·0, and that of females a decrease of 1·6 per 1000 living. Out of equal numbers living, the deaths of males were to those of females as 116 is to 100; the mean proportion in the second quarters of the ten preceding years having been the same.

Urban and Rural Mortality.

In 76 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1908 is estimated at about sixteen and a quarter millions, the death-rate calculated without reference to sex and age constitution of the populations was 13·7 per 1000 living; the rates in the three preceding second quarters had been 14·7, 14·8 and 14·9. The crude rates in the several towns ranged from 9·1 in Hornsey and in Handsworth (Staffs.), 9·3 in Walthamstow, 10·0 in Willesden and in East Ham, and 10·1 in Leyton, to 17·6 in Preston, 17·8 in Middlesbrough and in Merthyr Tydfil, 18·4 in Oldham and in Stockton on Tees, and 19·5 in Hanley.

In 142 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at nearly five millions, the crude death-rate was 12·9 per 1000 living; the rates in the three preceding second quarters had been 13·6, 13·4 and 14·0.

In the remainder of England and Wales, with an aggregate population estimated at more than fourteen millions, of whom nearly six and a half millions live in small towns, and more than seven and a half millions in rural districts, the crude death-rate was 14·1 per 1000 living; the rates in the three preceding second quarters had been 14·5, 14·6 and 14·5.

The crude death-rate, that is the proportion borne by deaths from all causes to each thousand of the population, is a fairly trustworthy test of relative mortality when comparing death-rates for short periods in the same area, but when one area is compared with another, crude death-rates should be supplemented by rates in which the sex and age constitution of the respective populations is taken into account. The following statement shows the crude and corrected death-rates in each of the above areas. (See also Table III. page xv.)

June Quarter, 1908.

— —	Crude Death-rates.	Corrected Death-rates.
England and Wales	13·8	13·8
76 Great Towns	13·7	14·6
142 Smaller Towns	12·9	13·5
England and Wales, less the 218 Towns	14·1	13·3

It should be further stated that owing to the difficulty of distributing to their proper areas deaths occurring in Institutions the death-rate in the rural area may possibly be somewhat over-stated.

Watering Places and Summer Resorts.

The deaths registered last quarter from all causes, and from each of the more important epidemic diseases, in those urban districts which are most nearly co-terminous with our chief watering places, are shown in Table XIII. For purposes of comparison the populations at the census of 1901 are also shown.

Mortality at Different Ages.

Of the 121,322 deaths registered last quarter, 23,559 were those of infants under one year of age, 55,414 those of persons aged between one year and sixty years, and 42,349 those of persons aged sixty years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was equal to 97 per 1000, the average in the ten preceding second quarters having been 114. Among registration counties with populations exceeding 100,000, the lowest proportions were 62 in Hertfordshire, 68 in Middlesex, 69 in Kent and in Wiltshire, and 70 in Surrey and in Buckinghamshire. The highest proportions were 112 in Cambridgeshire, 113 in Denbighshire, 115 in Carnarvonshire, 121 in Norfolk, 123 in Glamorganshire, and 140 in Carmarthenshire.

In the 76 great towns infantile mortality averaged 100 per 1000 births, being 3 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 46 in Hornsey, 52 in Handsworth (Staffs.), 70 in Tottenham, 71 in Burton upon Trent, 72 in Hastings and in Coventry, 73 in York, 74 in Leyton and in Southampton, and 75 in Halifax; the highest were 130 in Merthyr Tydfil, 132 in West Bromwich, 135 in Stockton on Tees, 141 in Rhondda, 145 in Wolverhampton, 160 in Hanley, and 167 in Burnley. Among the 142 smaller towns infantile mortality averaged 96 per 1000 births, ranging from 25 in Reigate and in Penge, 32 in Hereford, 38 in Finchley, 40 in Enfield, 43 in Lancaster, and 44 in Kettering, to 151 in Cambridge, 153 in Bilston, 154 in King's Lynn and in Darwen, 163 in Mountain Ash, 172 in Ashton under Lyne, and 202 in Aberdare. Excluding these 218 towns, infantile mortality in the remainder of England and Wales was in the proportion of 92 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 7·0 per 1000 of the estimated population at this group of ages, being 1·2 below the mean rate in the ten preceding second quarters. In the 76 great towns the mean mortality at this age-group was 7·4 per 1000, ranging from 4·5 in Handsworth (Staffs.), 4·6 in Great Yarmouth, 4·9 in Hornsey, and 5·0 in Walthamstow, to 10·0 in Rochdale, 10·1 in Salford, 10·3 in Hanley, 10·4 in Liverpool, 10·7 in Middlesbrough, and 11·1 in Oldham and in Stockton on Tees. In the 142 smaller towns the mortality at this age-group averaged 6·6 per 1000.

Among persons aged sixty years and upwards the mortality was at the annual rate of 64·9 per 1000 of the estimated population at this group of ages; the mean rate in the ten preceding second quarters having been 66·2. In the 76 great towns the mean mortality at this age-group was 66·8 per 1000, the lowest rates being 47·9 in Leyton, 49·3 in Southampton, 53·5 in Grimsby, 53·8 in Bootle, and 54·0 in Portsmouth; the highest rates were 82·5 in Swansea, 83·1 in Preston, 84·6 in Bolton, 84·8 in Bradford, 93·2 in Hanley and 93·6 in Smethwick. In the 142 smaller towns the rate averaged 64·5 per 1000.

Compared with the mean rates in the ten preceding second quarters, the mortality of infants under one year of age showed a decrease of 14·9 per cent., that of persons between one year and sixty years of age a decrease of 14·6 per cent., and that of persons aged sixty years and upwards a decrease of 2·0 per cent.

Mortality from certain Epidemic Diseases.

The 121,322 deaths from all causes include—

2,900	that were	attributed to	whooping-cough,
2,149	„	„	measles,
1,084	„	„	diphtheria,
1,078	„	„	diarrhœa,
675	„	„	scarlet fever,
434	„	„	"fever,"
9	„	„	small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 8,329 deaths were referred last quarter, being in the proportion of 0·94 per 1000 of the estimated population, or 0·39 per 1000 below the average proportion in the corresponding quarters of the previous ten years.

The rates of mortality from these diseases were severally below the decennial averages.

Whooping-cough accounted last quarter for 2,900 deaths, and for a death-rate of 0·33 per 1000 annually, which is below the average rate in the ten previous corresponding quarters by 0·02 per 1000. Among counties with populations exceeding 100,000, the lowest death-rates from this cause were 0·09 in Shropshire, 0·11 in Herefordshire, 0·13 in Somersetshire, and 0·14 in Sussex; the highest death-rates were 0·53 in Denbighshire, 0·54 in Durham, 0·56 in Norfolk and in Warwickshire, 0·62 in Monmouthshire, and 0·70 in Cambridgeshire. In the 76 great towns, whooping-cough caused an average death-rate of 0·37 per 1000 living. No death from this disease occurred either in St. Helens or in York during the quarter, and only one each in Walthamstow and Bury, but the death-rate was equal to 0·96 in Warrington, 0·97 in Barrow in Furness, 0·99 in Sunderland, 1·13 in Rotherham, and 1·14 in Merthyr Tydfil. In the 142 smaller towns the average death-rate from whooping-cough was 0·28 per 1000, the disease being especially fatal in Keighley, Chorley, Twickenham, Stoke upon Trent, Tipton, Cambridge, and

Exeter. In the remainder of England and Wales, whooping-cough caused an average mortality of 0·30 per 1000 annually. Among registration sub-districts outside the 218 chief towns, whooping-cough was exceptionally fatal in Stotfold, Harwich, Hillington, Aslackby, Cornforth, and Holywell.

Measles was returned as the cause of 2,149 deaths, corresponding to an annual rate of 0·24 per 1000 of the population, or 0·18 per 1000 below the average rate in the second quarters of the preceding ten years. Of the 55 registration counties, ten were free from measles fatality throughout the quarter. Among counties with populations of more than 100,000, the highest death-rates from this disease per 1000 of the respective populations were 0·40 in London, 0·44 in Essex, 0·57 in Glamorganshire, 0·72 in Cambridgeshire, and 0·81 in Carmarthenshire. In the 76 great towns measles caused an average mortality of 0·33 per 1000. In 22 of these towns no deaths from this disease were registered during the quarter. The highest death-rates were 0·99 in West Ham, 1·04 in Birkenhead, 1·17 in Salford, 1·57 in Preston, and 2·41 in Stockton on Tees. In the 142 smaller towns, measles was fatal on the average to 0·26 annually per 1000 living, and among these towns showed exceptional fatality in Mountain Ash, Cambridge, Brighouse, Aberdare, Acton, and King's Lynn. In the remainder of England and Wales the average measles death-rate was 0·14 per 1000. Among registration sub-districts outside the 218 chief towns, measles was especially fatal in Farningham, Wingham, Melford, Ilminster, Ashby de la Zouch, Stanley, Thornaby, and Loughor.

Diphtheria (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 1,084 deaths, a number corresponding to an annual rate of 0·12 per 1000 living, which is below the average rate in the ten previous corresponding quarters by 0·06 per 1000. In Rutlandshire and in Anglesey no deaths from this disease occurred last quarter, and only one death each in Pembrokeshire, Radnorshire, and Montgomeryshire. Among counties with populations exceeding 100,000, the highest death-rates from this disease were 0·18 in Middlesex, 0·19 in Staffordshire, 0·21 in Derbyshire, 0·23 in Cambridgeshire, and 0·31 in Bedfordshire. The average death-rate from diphtheria in the 76 great towns was equal to 0·12 per 1000 of their aggregate population. No death from this disease occurred in seven of these towns, and only one each in fifteen other towns. The highest death-rates were, 0·35 in Derby and in Salford, 0·40 in West Bromwich, 0·45 in East Ham, and 0·47 in Wolverhampton. In the 142 smaller towns the mortality from this disease averaged 0·13 per 1000, the rate being highest in Fenton, Wakefield, Torquay, Ramsgate, Barking Town, and Workington. In the remainder of England and Wales, diphtheria was fatal in the average proportion of 0·12 per 1000 living. Among registration sub-districts outside the 218 chief towns, diphtheria was especially fatal in Alton (Hants), Whittlesey, Colneis, and Runcorn.

Diarrhœa was the assigned cause of 1,078 deaths last quarter, corresponding to an annual rate of 0·12 per 1000, which is lower by 0·04 per 1000 than the decennial average rate for the second quarter of the year. In nine counties no deaths from diarrhœa were returned last quarter. Among counties with populations exceeding 100,000 persons the highest death-rates were 0·19 in Lancashire and in Carnarvonshire, 0·21 in Staffordshire, 0·24 in Glamorganshire, and 0·31 in the North Riding of Yorkshire. In the 76 great towns the average death-rate from diarrhœa was 0·16 per 1000. No deaths were returned in eight of these towns; the rate was highest in the following towns:—Rochdale and Barrow in Furness 0·32 per 1000, Norwich 0·33, Warrington 0·34, Oldham 0·37, and Middlesbrough 0·89. In the 142 smaller towns diarrhœa was fatal on the average to

0·12 per 1000 of the population, and caused the highest mortality in Longton and in Fenton. In the remainder of England and Wales the death-rate from diarrhœa averaged 0·08 per 1000.

Scarlet fever accounted last quarter for the deaths of 675 persons, equal to a rate of 0·08 per 1000 living, or 0·03 per 1000 less than the decennial average rate for the second quarter. Fourteen of the counties of England and Wales were free from scarlet fever mortality throughout the quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·11 in Essex, 0·14 in Middlesex, 0·15 in Lancashire, and 0·20 in Buckinghamshire. In the 76 great towns scarlet fever accounted for an average mortality of 0·10 per 1000 annually. No deaths from this disease were recorded in 22 of these towns. The highest scarlet fever death-rates were 0·26 in King's Norton and in St. Helens, 0·27 in Salford, 0·29 in Leyton and in Reading, 0·33 in Liverpool, and 0·46 in West Bromwich. In the 142 smaller towns scarlet fever was fatal in the average proportion of 0·06 per 1000 living, and caused the highest mortality in Dover and in Bacup. In the remainder of England and Wales this disease caused an average death-rate of 0·06 per 1000 living. Among registration sub-districts outside the 218 chief towns, scarlet fever was exceptionally fatal in Wycombe, Sutton in Ashfield, and Sedgefield.

"*Fever*" (including the three chief forms—*typhus*, *enteric fever*, and '*pyrexia*' of uncertain origin) was the registered cause of 434 deaths last quarter, equal to an annual death-rate of 0·05 per 1000 of the population, or 0·04 per 1000 less than the average rate in the second quarters of the previous ten years. In fifteen counties no deaths from fever were returned last quarter; among counties with populations exceeding 100,000, the highest death-rates were 0·08 in Cheshire and in Lancashire, 0·09 in Hampshire and in Durham, and 0·14 in Norfolk. In the 76 great towns fever caused an average mortality of 0·05 per 1000 annually. In fourteen of these great towns no deaths from fever occurred; the towns with the highest fever death-rates were Barrow in Furness, where the rate was 0·26 per 1000, Rotherham 0·38, and Norwich 0·46. In the 142 smaller towns fever caused an average mortality of 0·05 per 1000 annually, the mortality being highest in Dudley, Workington, and Ebbw Vale. In the remainder of England and Wales, the death-rate from fever averaged 0·04 per 1000. Among registration sub-districts outside the 218 chief towns, fever was especially fatal in Tanfield.

Nine deaths from *small-pox* were registered last quarter. The deaths in the four quarters immediately preceding having numbered 5, 0, 0 and 0 respectively. Of the 9 deaths from small-pox registered last quarter, 5 belonged to the Urban District of Skipton and 2 to that of Bexley.

Violent Deaths.

The deaths in England and Wales referred to different forms of violence, either accidental or otherwise, numbered 4,969 last quarter, and corresponded to an annual rate of 0·56 per 1000 of the population, against an average of 0·59 in the ten preceding second quarters. In registration counties with populations exceeding 100,000, the lowest death-rates from violence were 0·24 in Buckinghamshire, 0·34 in Norfolk, 0·38 in Carnarvonshire, and 0·39 in Berkshire; the highest rates were 0·69 in Northumberland, 0·72 in Carmarthenshire, 0·75 in Monmouthshire, and 0·81 in Glamorganshire. In the 76 great towns the mean rate was 0·55 per 1000 living; among the several towns the rate was 0·14 in Aston Manor, 0·18 in Smethwick, 0·20 in Southampton, 0·24 in Handsworth (Staffs.), 0·28 in Brighton, and 0·30 in Devonport; but it rose to 0·75 in Bury, 0·76 in Wigan, 0·78 in Merthyr Tydfil, 0·82 in Swansea, 0·90 in Rhondda, and 1·00 in Bootle.

Certification of Causes of Death.

Of the 121,322 deaths registered in England and Wales last quarter, the causes of 110,837, or 91·4 per cent., were certified by registered medical practitioners, and the causes of 8,734, or 7·2 per cent., by coroners after inquest; whilst the causes of the remaining 1,751, or 1·4 per cent., were not certified, the average proportion of uncertified deaths in the ten preceding second quarters having been 1·7 per cent. Among registration counties with populations exceeding 100,000, the proportion of uncertified deaths was less than 1 per cent. in London, Sussex, Middlesex, Buckinghamshire, Oxfordshire, Wiltshire, Devonshire, Somersetshire, Gloucestershire, Cheshire, the East Riding of Yorkshire, and Glamorganshire, but it reached 2·7 per cent. in Berkshire and in Northamptonshire, 2·8 in Cumberland, 3·2 in Durham, 3·3 in Derbyshire, and 3·4 in Carnarvonshire. In the 76 great towns the mean proportion of uncertified deaths was 1·0 per cent.; but whilst no uncertified deaths were registered in Croydon, Tottenham, West Ham, East Ham, Leyton, Walthamstow, Brighton, Southampton, Ipswich, Great Yarmouth, Plymouth, Devonport, Wolverhampton, Derby, or Wigan, the proportion per cent. rose to 3·7 in Bootle and in St. Helens, 3·8 in Birmingham, 4·4 in Kings Norton, 6·3 in Warrington, and 7·6 in Gateshead.

Inquests.

Inquests were held in England and Wales concerning 8,734, or 7·2 per cent., of the total deaths, the mean proportion in the ten preceding second quarters having been 6·7 per cent. In the 76 great towns the proportion of inquest cases averaged 8·2 per cent., ranging from 2·3 in Barrow in Furness, 3·1 in Aston Manor, 3·8 in Gateshead, 4·1 in Preston, 4·3 in South Shields, and 4·5 in Rotherham, to 10·3 in Southampton, 10·4 in London, 10·9 in Portsmouth, 11·9 in Cardiff, and 12·4 in Tottenham.

Deaths in Public Institutions.

The total deaths registered in England and Wales include 24,401, or 20·1 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding second quarters having been 16·7 per cent. In the 76 great towns the deaths in public institutions averaged 27·4 per cent. of the total deaths, the lowest percentages in the several towns being 1·5 in Rhondda, 7·7 in Handsworth (Staffs.), and 9·8 in Kings Norton and in Gateshead; the highest percentages being 29·0 in Birmingham, 29·8 in West Ham, 31·7 in Walthamstow, 35·9 in Liverpool, and 41·9 in London.

Edinburgh, Glasgow, Dublin, and Belfast.

The annual rates of birth and death per 1000 living in these towns last quarter were as follows:—

	Birth-rate.	Death-rate.
Edinburgh	23·6	15·5
Glasgow...	30·8	17·1
Dublin	31·1	20·4
Belfast	31·6	19·1

Colonial and Foreign Cities.

The Registrar-General has been favoured with returns of vital statistics by the authorities of 27 of the principal Colonial and Foreign Cities. From these a summary has been constructed for the past quarter (Table XIV.). Excluding the Indian cities, the highest and lowest annual rates of birth and death during the second quarter of 1908 were as follows :—

Birth-Rates.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Toronto	35·2	Brussels	17·5
Bucarest	30·9	Paris	19·1
Trieste	30·7	Prague	21·7
Breslau	30·5	Antwerp	22·2
Copenhagen	29·6	Berlin	22·9
New York	28·2	Vienna	23·6
		London ... 26·2	

Death-Rates.

—	Highest per 1000 living.	—	Lowest per 1000 living.
St. Petersburg	30·8	Antwerp	12·6
Moscow	30·5	Chicago	13·4
Bucarest	25·6	Brussels	14·4
Trieste	23·7	Amsterdam	14·5
New Orleans	22·7	Christiania	15·0
Prague	21·5	Hamburg	15·1
Breslau	21·1	Berlin	15·2
		London ... 12·7	

Small-pox caused 141 deaths in Moscow, 99 in St. Petersburg, 5 in New Orleans, and 1 each in Breslau and in Trieste.

Measles was most fatal, in proportion to population, in St. Petersburg, Trieste, Vienna, and Moscow; *scarlet fever* in Bucarest, New York, St. Petersburg, and Trieste; *diphtheria* in Toronto, New York, St. Petersburg, Moscow, and Philadelphia; *whooping-cough* in Copenhagen, Bucarest, Venice, Berlin, and Prague; "*fever*" in St. Petersburg, Philadelphia, Toronto, New Orleans, and Moscow; and *diarrhœal diseases* in New Orleans, Moscow, Munich, and Breslau.

Infantile Mortality.—Among those European cities for which the figures are available, the proportion of deaths of children under one year of age to 1000 registered births ranged from 94 in Paris, 103 in Stockholm, 106 in Amsterdam, and 114 in Christiania, to 195 in Breslau, 209 in Vienna, and 211 in Prague and in Bucarest.

INDIAN CITIES.—The death-rate was equal to 33·0 per 1000 in Madras, 39·4 in Calcutta, and 46·1 in Bombay. *Small-pox* caused 510 deaths in Bombay, 229 in Calcutta, and 3 in Madras; *measles* caused 299 deaths in Bombay, 39 in Calcutta, and 31 in Madras. Under the heading "*fever*" 3,701 deaths were returned in Bombay, 2,181 in Calcutta, and 1,322 in Madras, including 3,010 and 982 deaths from *plague* in Bombay and Calcutta respectively. The mortality from *diarrhœal diseases* was excessive in all of these Indian cities; *Asiatic cholera* caused 1,809 deaths in Calcutta, 30 in Madras, and 18 in Bombay.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the second quarter of the year 1908 (*see* pages xxvii—xxxii); and in the two following Tables, these numbers have been reduced to rates per 1000 living in the several populations (*see* pages xxxiii—xxxviii).

TABLE V.—76 Great Towns.—Population; Births, Deaths, and Meteorology in the 13 Weeks ended 27th June, 1908.

NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The deaths in London have been corrected as far as possible (1) by excluding deaths of all non-Londoners, and (2) by including the deaths of Londoners occurring in Metropolitan Public Institutions situated outside the County. (See Table XII.) The deaths in the other towns have been corrected, as far as possible, for deaths occurring in Public Institutions; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been credited to the respective areas to which they belong.

TOWNS.	Estimated Population in the middle of 1908.	Births.	Deaths.	The Deaths registered include: Deaths of Infants under 1 Year of Age.	Deaths of Persons aged 60 Years and upwards.	Deaths from: Principal Epidemic Diseases.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhœa.	Violence.	Inquest Cases.	Deaths in Public Institutions.	Uncertified Causes of Death.	Mean Temperature (Degrees Fahr.). *	Rainfall (Inches). *	TOWNS.

* The values for Mean Temperature and Rainfall relate to the calendar quarter. [a] Phœnix Park. [b] Fitzwilliam Square.

† The figures for Edinburgh and Glasgow are for the calendar quarter. In addition to the deaths in Col. 12 there were 5 deaths in Edinburgh and 40 in Glasgow registered as due to Cerebro-spinal meningitis, Epidemic Cerebro-spinal [illegible]

NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The death-rate in London has been corrected as far as possible (1) by excluding deaths of all non-Londoners, and (2) by including the deaths of Londoners occurring in Metropolitan Public Institutions situated outside the County. (See Table XII.) The death-rates in the other towns have been corrected for deaths occurring in Public Institutions; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been credited to the respective areas to which they belong. Of the deaths excluded from London in 1905, only those which occurred in the London Fever Hospital, the Metropolitan Asylums Hospitals, and the Middlesex County Lunatic Asylum were added to the several parts of the Outer Ring.

TABLE VII.—**One hundred and forty-two smaller Towns.—Population; Births and Deaths** in the QUARTER ended 30th June, 1908.

NOTE.—The 142 Smaller Towns are those with populations of 20,000 but not exceeding 50,000 at the Census of 1901. The deaths in these towns have been corrected for deaths occurring in Public Institutions, while in addition the deaths occurring in London of all persons known to belong to towns in the Metropolitan Outer Ring have been credited to the several towns to which they belong.

TOWNS.	ESTIMATED POPULATION IN THE MIDDLE OF 1908.	BIRTHS.	DEATHS.	The DEATHS registered in the Quarter include													DEATHS under 1 year to 1000 Births.	TOWNS.

The *Registration Districts*, 633 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

* See page 2, note [b].

[b] For London, the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrars.

* 10:—On the 1st April, 1908, the boundary between this district and EDMONTON (129) was altered. See page 70.

II.—SOUTH EASTERN COUNTIES.—Registration Districts.

No.	Registration Districts.	Area in Statute Acres.	Enumerated Population, 1901.	Marriages: Registered in Quarter ended 31 Mar. 1908.	Births: Registered in Quarter ended 30 June 1908. [a] The *Registration Sub-districts* (2028 in number) are sub-divisions of the *Registration Districts* in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; *F* a Hospital for Infectious Diseases; *H* another Hospital; and *L* a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

[b] See page 2, note [b].

[c] See page 6, note [b].

* 10: 2.—On 1st April, 1908, the boundary of this sub-district was altered. See page 70.

METEOROLOGY.

Remarks on the Weather over the United Kingdom during the Quarter ended June 30th, 1908.

EXTRACTED FROM THE

MONTHLY WEATHER REPORTS

OF THE

METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 170 STATIONS,

TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 56 STATIONS

IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

APRIL, 1908.

Pressure, Winds and Weather.—The month was chiefly remarkable for the snowstorms of the week ending April 25th. The distribution of mean pressure for the month was also of an exceptional character. The region of lowest barometer values, below 29·9 ins., was over Heligoland Bay, while the highest means, above 30·1 ins., were over northern Iceland and northward, and out at the Azores. In the main, therefore, the type of conditions over the British Isles favoured the prevalence of winds from Polar directions. For a more detailed account of its weather features, the month may be conveniently divided into two principal periods—the first eighteen days, during which there were anticyclones covering the region from the Spanish Peninsula northward and north-eastward to Scandinavia; and the remaining twelve days, when high pressure had become established beyond the Arctic Circle, in the Iceland-Greenland region, while numerous depressions affected either the British Isles or the Continent, from Spain to the Baltic and Finland. The most disturbed and inclement weather occurred after the middle of the month.

The depressions which affected us in the earlier period were few and comparatively unimportant. One which appeared to the south-westward of Iceland on the 1st passed northward of the Faeröe, then down the North Sea, and dispersed near Heligoland on the 5th. As this system advanced the wind on our coasts veered from South-West to North, and freshened, but of the telegraphic reporting stations only Malin Head and Holyhead experienced the force of a gale, the former a strong South-Westerly gale in the night of the 2nd, the sole instance of a strong gale during the month. At the anemometrical stations there was no record of a mean hourly velocity of 44 miles in any hour throughout the month. Between the 2nd and the 5th small quantities of snow or hail fell in most parts of the country, and thunderstorms occurred over a considerable portion of England and in the north-west of Ireland. An aurora was seen in the north of Scotland on the 2nd, and at Dublin on the 4th. Temperature was moderate and there was little or no night frost.

A quiet anticyclonic spell followed, the barometer rising to 30·5 ins. at Roche's Point, on the 6th and 7th, and above 30·6 ins. in Scotland, 30·65 ins. at Stornoway, on the 16th. Winds from between North-West, North and East, generally of little strength, blew on most days. There were some rain, hail or snow showers, but as a rule the period was fair to very fine and dry, with from ten to seventeen successive rainless days in some places. On a few occasions the thermometer rose to 60° and upwards at various stations, to 65° at Maidenhead on the 9th, and to 66° at Dumfries, and 68° at Crieff on the 17th. As a whole, however, the period was rather cold, with very numerous afternoon maxima below 50°, several below 45°, as low as 41° at Rugby on the 6th, and at Sumburgh Head on the 18th. Night frosts were also experienced extensively, rather severe in some cases, the shade minima ranging downwards to 23° at Barnet on the 9th, and at Maidenhead on the 13th.

The earliest symptoms of a change in the distribution of pressure were developed in the course of the 17th, with the transfer of the central space of the anticyclone north-westward from Scotland to take up a position in the Iceland region for the rest of the month. On the morning of the 17th the Baltic, from Bornholm to Memel, marked the separation between two high pressure systems, with very light Northerly breezes on the western side, and Southerly breezes on the eastern side. In the course of the day a complete cyclonic circulation was

brought about, and the evening observations showed a well-marked depression. It remained over the Baltic until the evening of the 19th, growing deeper, and thus causing a considerable increase in the pressure gradient from Sweden to the British Isles and across to Iceland. Strong or high Northerly to North-Easterly winds were consequently set up over an extensive area, increasing to the force of a gale locally in Scandinavia and about Iceland. This air current, drawn from the Polar Seas, was exceedingly cold, and it started a period of exceptionally inclement weather for the time of year, sending the temperature down far below its normal level, and carrying snow and hail to all parts of the United Kingdom. The Easter holiday, which began under most favourable atmospheric conditions, was marred by the cold and snowstorms of Easter Sunday (April 19th) and subsequent days. The Baltic disturbance passed away northward across Finland on the 20th, but others visited our neighbourhood, and they resulted in worse weather. A depression appeared over southern Norway on the 20th, and on the 22nd it dispersed over the Baltic. On the afternoon of the 22nd a cyclonic circulation of light breezes formed over central England, expanding quickly so as to embrace nearly the whole country by evening, and in the course of the night it became a very complex disturbance. One barometric minimum passed from near Cambridge across to southern Sweden and dispersed on the evening of the 23rd. Another, starting from the western end of the English Channel on the morning of the 23rd, followed a circuitous path, up the North Sea, round the north of Scotland, and down the Atlantic beyond our western coasts. When this depression was near London, on the evening of the 23rd, a new one appeared near the Faeröe. It moved southward to the Channel Islands by the morning of the 25th, then curved northward across the eastern counties, and two days later it dispersed off the Firth of Forth. These disturbances were of no great depth, the lowest barometer for the month, down to nearly 29 ins., occurring in Shetland on the morning of the 25th, but the Arctic high pressure maintained its position and provided a constant supply of cold air.

The Polar winds during this period were frequently fresh or strong in force, but only Jersey, Brighton and Shoeburyness attained gale force in squalls on the 25th. Snow set in in the north-east of Scotland in the early hours of April 19th, and spreading very rapidly southward it reached southern England by the middle of the forenoon. Thenceforward for a whole week it was of daily occurrence in many parts of the kingdom, developing into widespread and rather heavy storms on the 23rd, and culminating in an April snowstorm of unprecedented severity on the next two days over England and Ireland. Traffic by road and rail was seriously delayed, either entirely suspended or trains were from one to three hours late. During a blinding fall of snow in the Solent in the afternoon of the 25th the mail-steamer "St. Paul" ran down H.M.S. "Gladiator," and many lives were lost. Much of the snow melted as it fell, or thawed rapidly, so that the actual depth of the fall cannot be accurately determined for any station. Several observers measured 4 ins. and upwards on the 23rd. A depth of 8 ins. was reported at Thetford, where the rain and snow yielded 0·9 in. of water. The largest amounts of water recorded were, for the 24th 1·2 in. at Southampton, and 1·4 at Swarraton; and for the 25th, 1 in. at Coventry, 1·1 in. at Stockbridge, 1·3 in. at Rugby and Leighton Park, Reading. 1·7 in. at Oxford, 1·9 in. at Pyrton Hill, 2·2 ins. at Salisbury, and 2·5 ins. at Bucklebury Place, Reading. At 5 a.m. on the 24th the snow lay 6 ins. deep at Epsom, but by 9 a.m. it was only 4 ins., and at noon it had completely disappeared. On the morning of the 25th it was 14 ins. deep at Southampton, and over 10 ins. at Totland Bay, Isle of Wight; and next morning it was 11 ins. deep at Marlborough, 16 ins. at Oxford, and 19 ins. at Bucklebury Place, the observer thinking that the fall had amounted to 30 ins. The rapid melting of this great snowstorm brought about heavy floods in the Thames valley.

Intense cold accompanied these snowstorms, there being scores of instances of night shade temperatures of 25° and under, down to 16° at West Linton, 11° at Carlisle, 10° at Balmoral, and 9° at Garforth; even Scilly and Guernsey touched 33° and Jersey 32°. Afternoon maxima below 40° were almost as numerous, 34° as far south as Birmingham, 33° at Sumburgh Head, and 30° at Deerness; Scilly 45°.

From the 26th to the end, with a low pressure beyond Ireland, a southerly to south-easterly type prevailed, the snow gave place to rain, falls of more than an inch occurring in several localities in England and Ireland on each of the last four days of the month, and a good deal of fog setting in on the southern and western coasts. An auroral display was reported on the 28th in the north of Scotland.

On nearly all sections of our coasts the sea water was from 1° to 3° warmer than in March, at Margate 4° warmer. Between the Firth of Forth and the Wash the water and the air on shore had the same mean temperature, while on other coasts the water was the warmer, to the extent of 2° or 3° in some localities.

Rainfall.—There was a deficiency of precipitation over Scotland, southern Ireland and the English Channel, the loss at Laudale being as much as 2·3 ins. Generally over England and northern Ireland there was an excess, of as much as 2·1 ins. at Belfast and Reading, 2·2 ins. at Salisbury, 2·4 ins. at Hawarden Bridge, and 2·7 ins. at Oxford. The largest aggregates of rain and melted snow were 5·1 ins. at Glencarron, 4·4 ins. at Salisbury, 4·3 ins. at Oxford, and 4·1 ins. at Belfast, while the smallest were in the north and east of Scotland, less than an inch at Strathpeffer, 0·9 in. at Crieff, and 0·8 in. at Dundee. The number of days on which precipitation was measured ranged from 23 at Belvoir Castle and Foynes, to 10 at Poltalloch and Thorntonhall, and 8 in the Forest of Dean.

Bright Sunshine.—The duration of sunshine was rather variable, being mostly in defect over the eastern, central and south-western parts of Britain, slightly in excess elsewhere. Marchmont returned a loss of 50 hours, and Durham 43 hours, while Markree Castle had a gain of 24 hours, and the Isle of Man 22 hours. The highest record was at Douglas, 202 hours, or 48 % of the possible duration; the smallest, at Hull, 59 hours, or 14 % of the possible.

MAY, 1908.

Pressure, Winds and Weather.—The distribution of pressure for the whole month indicated an area of low barometer out on the Atlantic, westward of Scotland and southward of Iceland, and one of high barometer from the Azores to the Bay of Biscay and the Continent. In the extreme south of England the results were slightly higher than usual, by 0·06 in. at Jersey, while over the rest of the Kingdom they were lower, to the extent of 0·11 in. at Blacksod Point. Between Jersey and Stornoway the pressure difference amounted to 0·24 in., whereas the normal difference is only 0·1 in. A Southerly to Westerly air current prevailed generally, but in the south, east, and north a South-Easterly to North-Easterly current was experienced on several days. Although the mean pressure gradient was steeper than usual, the wind was as a rule of no great strength. The only instance of gale force at any of the telegraphic reporting stations occurred at Yarmouth in the night of the 29th, from North-East. Pendennis Castle alone of the anemometrical stations registered a mean hourly velocity exceeding 38 miles; 45 miles in an hour from South South-West, and a rate of 55 miles per hour in gusts occurred on the night of the 14th.

Broadly speaking, the weather of the month was divisible into two main types. During the first fifteen days pressure was generally low over the British Isles and on the Atlantic to the westward and south-westward, high in the Iceland region and southward of the Bay of Biscay; the remainder of the month was marked by a reversal of this pressure distribution.

At the commencement the centre of low pressure was as far away as the Azores, but the system was an extensive one, indicated beyond Ireland in the first five days, then stretching northward to Shetland and the Faeröe. On the 5th a secondary became detached from the main system, passed north-eastward across Scotland to Norway, thence eastward to Russia. At all stations except Jersey the barometer fell below 29·5 ins. on the 5th or 6th, below 29·1 ins. at Blacksod Point and Malin Head, the lowest pressure of the month. On the 14th the primary moved across the south of Ireland and Wales, and on reaching the North Sea it dispersed. When the depression was approaching Kerry the barometer fell to 29·16 ins. at Valencia, but subsequently pressure increased decidedly at the centre and all round. While the wind during the first fortnight was largely from Southerly points, the direction was very variable, and, as a rule, the force was moderate to light, only Pendennis Castle recording a gale velocity once. Changeable unsettled weather prevailed in all parts of the country, rain was frequent, and from the 2nd to the 6th, and the 11th to the 15th, thunderstorms, or thunder or lightning alone, occurred in many parts of the Kingdom. Heavy rains were, however, unusually rare; on the 3rd, 1·45 in. fell at Sparkhill, and 1·2 in. at Edgbaston, both in Birmingham; and on the 14th 1·3 in. at Abersychan (Monmouthshire).

From the 16th pressure was nearly continuously high. Readings exceeded 30·5 ins. at some Channel stations on the 18th, 30·58 ins. at Jersey, and at almost every station in the country on the 27th and 28th, 30·57 ins. at Shields. The principal disturbances of this period were found about Iceland or on the Continent, those which visited our neighbourhood being mostly very shallow and of minor importance. Light variable breezes were consequently largely in the ascendant, and the weather was generally fine, bright and dry, many places having only two or three small falls of rain. West Byfleet had 12 consecutive rainless days, East Ham and Isleworth 13, and Syston (Leicestershire) 14. On the 20th to 25th, and 29th to 31st, the fine weather was interrupted by thunderstorms in numerous localities, but again the accompanying rainfall was comparatively small; Whitby registered, however, nearly 1·5 in. on the 30th. In some cases the thunderstorms were rather severe, and those of the 22nd produced hail over a wide extent of country.

Throughout the month the temperature conditions were of a somewhat abnormal character. There was an almost entire absence of low night temperatures—a most unusual circumstance in May. Shade minima from 50° to 55° were not uncommon, but minima below 40° were rarely registered in any district; 32° was touched at Cirencester and Wokingham on the 11th, and at Garforth on the 22nd; 31° at Marlborough on the 11th, at Fort Augustus and West Linton on the 22nd, and at Wokingham on the 23rd; and 30° at Balmoral on the 22nd, and at Garforth on the 24th. The temperature of nocturnal radiation also showed that even on the grass there was little or no frost. With this may be associated the very rapid increase in the temperature in the ground, which had been chilled down to about 40° in the severe frost of Easter week, but was about 20° warmer by the end of May, in a period of five weeks. The day maxima, on the other hand, were much more variable than the night values.

Following the severe cold which characterised the closing days of April a sudden and rapid rise of the thermometer took place on the first day of May, so that afternoon maxima of 70° and upwards were registered in many parts of the Kingdom, 77° at Maidenhead. On the following day still higher values were reported, 78° at Bettws-y-Coed, Epsom, Isleworth and Jersey, and 79° at Maidenhead. This burst of warmth, however, was of very brief duration,

for on the 3rd a shallow irregularity of pressure lying across the country brought with it a very cold rain, and a decided decline of temperature was the result. In Scotland the north-east of Ireland, and the northern and eastern portions of England the afternoon maxima were nearly all below 50°, in several instances 45° or lower, 42° at Aberdeen and Morpeth, and 41° at Sumburgh Head. Thenceforward to the middle of the month the day readings were generally below the normal, the maxima in very numerous cases being below 60°. A striking feature of this period was the persistent afternoon cold along the eastern half of the English Channel, from Portland Bill to Dover. From the 4th to the 15th the great majority of the maxima were below 55°, the coldest day being the 14th, when Brighton touched only 51°, and Ventnor, Worthing, Lewes and Bexhill-on-Sea, 52°. This cold spell is reflected in the mean results for the month, which show this southern locality to have had about the same temperature as the extreme north of England ; its mean temperature was about 4° lower than that of the Thames Valley. Under the anticyclonic conditions of the second half of the month brighter and warmer weather ruled, the last week being very warm. A maximum of 79° occurred at Dumfries on the 28th, and at Maidenhead and Winslow on the 31st ; 80° at Leeds on the 27th, Fort William on the 30th, and Isleworth on the 31st ; and 81° at Carlisle on the 28th.

Fogs were frequently experienced on many sections of our coasts, and on occasions they were very dense locally. On the western coasts they prevailed from the 1st to the 9th, and from the 16th to the 20th, while from the 26th to the 31st they were of a local character. On the English Channel they were common from the 3rd to the 11th, and the 16th to the 20th, local from the 26th. On the East coast they were pretty general from the 1st to the 6th, and from the 28th to the end.

There was everywhere an increase in the temperature of the sea water round our coasts as compared with April, the increase generally amounting to from 3° to 6°, as much as 7° at Pennan, Eastbourne, the Solway Firth and Ballydonegan, and 8° at Cromarty and Margate. The temperature of the air on shore had, however, increased at a greater rate than that of the coastal water. In the west of Ireland sea and air had about the same mean temperature in May, but elsewhere the water was the colder, in several localities by as much as 5° to 7°, and at the Newarp light vessel 9°.

Rainfall.—Only in the north-western portion of England was there a general excess of rain during the month, the records in other districts being divided between excess and defect, the latter predominating. No station returned a deficiency of as much as an inch, while Hawarden Bridge, Liverpool, Cheadle, Markree Castle and Stonyhurst had an excess of slightly over an inch. The largest aggregate totals were 4·5 ins. at Laudale, 4·3 ins. at Fort William, and 4·1 ins. at Buxton ; the smallest were a little less than an inch at various stations in the eastern, midland and south-eastern counties of England. Rain was measured on 26 days at Malin Head, and on 25 days at Roche's Point, against 10 or less in several localities, 7 at Hidcote Campden, Gloucestershie, and Doneraile, Cork. On the 3rd 0·24 in. fell in 7 minutes at Camden Square, London ; 0·61 in. in a "short time" at Fulbeck on the 6th ; 0·8 in. at Canterbury between 2 a.m. and 3 a.m. on the 21st ; and 0·53 in. in half an hour at Ennistymon, Clare, on the 31st.

Bright Sunshine.—The duration of bright sunshine was rather variable over the country generally, but in most places it was less than the average, the loss amounting to 53 hours at Falmouth, 55 hours at Jersey, and 63 hours at Scilly, whereas Edinburgh had an excess of 18 hours and Blackpool 27 hours. In several parts of the Kingdom the aggregates exceeded 200 hours, up to 231 hours at Portsmouth, and 234 hours at Bournemouth, or 49% of the possible duration, the smallest records being 142 hours, or 29% at Newcastle-on-Tyne, and 116 hours, or 24%, at Hull.

JUNE, 1908.

Pressure, Winds and Weather.—The mean pressure for June was above the normal in all parts of the British Isles, the excess ranging from 0·06 in. at Sumburgh Head to 0·12 in. at some of the Irish stations. Over the northern portion of the kingdom the general distribution of mean pressure was very similar to the average, but over the South Midland counties of England the results show a local maximum of pressure. In Iceland pressure was below 29·9 in., and to the southward of Ireland and England above 30·1 in. In good agreement with this pressure distribution the winds experienced over our western and northern districts were mainly from between South-West, West and North-West, while over the eastern half of England there was a decided prevalence of Northerly to Easterly breezes. The mean pressure gradient across the country did not differ much from what is usual in this quiet period of the year, so that, as a rule, there was not much wind. Not one of the anemometrical stations returned a mean velocity of as much as 44 miles in an hour throughout the month, and at only a few of the north-western telegraphic reporting stations was the force of a gale attained.

During the month there were several modifications in the general type of pressure distribution, but with some few exceptions the weather experienced was of a fairly uniform character, mostly fine, bright and very dry.

A high pressure system which had covered the country through the second half of May was followed by shallow depressions in the opening days of June. From the 1st to the 4th these produced exceedingly variable weather and light winds. Although rain was experienced

everywhere there were numerous instances of bright sunshine records amounting to between 10 and 15 hours in a day. This had considerable influence on the warmth of the period, for with the solar radiation thermometer mounting to and above 140°, the temperature of the air in the shade rose to 80° and upwards in many localities, 83° being reached on the 3rd at Shrewsbury, and on the 4th at Ranceby, Epsom, Salisbury and Ventnor; 84° at Isleworth on the 3rd, and Raunds on the 4th; and 85° at Southampton and Whitby on the 4th; while on each of the first four mornings there were a few records of minimum night temperatures as high as 60° or 61°. The conditions were highly favourable to the formation of electrical disturbances, and generally throughout England thunderstorms of more or less violence occurred daily, while in Ireland a few localities were affected on the 1st and 3rd, and in Scotland on the 2nd and 4th. Although the accompanying rainfall was heavy, there were not many large amounts registered, 1·1 in. at Tunbridge Wells, and 1·2 in. at Eastbourne on the 1st; 1 in. at Birmingham and 1·1 in. at Dover on the 2nd; and 1·2 in. at Epsom and 1·7 in. at Rochford, Worcestershire, and 2·8 in. at Cheadle, Staffs. on the 3rd. Falls of hail appear to have been much less common than usual in such circumstances.

The most remarkable feature of this broken weather was a violent squall of very limited area which swept across the Thames Valley, in the immediate western suburbs of London, in the night of the 1st, accompanied by a heavy thunderstorm. In the neighbourhood of Hampton Court so severe was the squall that extensive destruction was occasioned, many of the trees in Bushy Park being uprooted. At Kew Observatory, on the south side of the Thames, the autographic records show that the barometer rose 0·064 in. between 9.50 p.m. and 10 p.m., and the temperature in the shade fell about 7°. At 9.53 p.m. the wind suddenly reached a velocity of 58 miles per hour. Between 9.45 and 10 p.m. the rainfall was 0·3 in., and of this amount 0·27 in. appears to have fallen in the brief space of two or three minutes. A squall of a very similar character, and almost as destructive in its effects, passed over north Hertfordshire on the afternoon of the 4th.

After this, for about a fortnight, the conditions were somewhat variable in character, the pressure distribution sometimes cyclonic, at others anticyclonic, without exceptional variations of pressure. The only instances of the barometer descending to or below 29·5 in. occurred between the 13th and the 16th. During the passage of a moderately deep depression from Iceland to Norway, secondary disturbances were formed over Northern Britain on the 13th, and the barometer fell below 29·5 in. at a number of stations, to 29·25 in. at Aberdeen and 29·24 in. at Sumburgh Head. In various localities the South-Westerly wind increased to the force of a fresh or strong breeze, but only Holyhead experienced a gale. With the advance of the disturbance rain fell nearly everywhere, but there were few large quantities—nearly all in the north-west quarter of England—on the 12th, 1·1 in. at Bettws-y-Coed, 1·2 in. at Stonyhurst, 1·3 in. at Aspatria, and 1·4 in. at Carnforth; on the 13th, 1·1 in. at Marchmont, 1·2 in. at Penrhyn Quarries, 1·3 in. at Uldale, Cumberland, 1·6 in. at Graythwaite, Lake Windermere, and 2·2 in. at Kirkby Lonsdale. Next day, in a thunderstorm at Ennistymon (Clare), 0·6 in. fell in half an hour. On the 15th a new depression appeared off Ireland, moving on a north-easterly course, and by evening the barometer read 29·18 in. at Stornoway, and 29·16 in. at Castlebay. Southerly or South-Westerly strong or high winds blew in several districts, a gale in the Hebrides, in Donegal and at Holyhead. As the depression passed beyond Scotland, a secondary disturbance formed on the 16th over the West Midland counties, where over 1 in. of rain fell in Birmingham and Shrewsbury. This may be regarded as the termination of the unsettled portion of the month over England, but in Ireland and Scotland it was maintained until the 22nd.

Gradually the distribution of pressure became modified, and from the 21st to the end anticyclonic conditions were in the ascendant all over the kingdom. On the 24th the barometer rose to 30·47 in. at Valencia, and to 30·49 in. at Blacksod Point; and on the 27th to 30·46 in. at Liverpool, and to 30·47 in. at Shields, the highest records for the month. The weather was very sunny and dry, no rain being registered at a large number of stations in the last 13 or 14 days. Until nearly the close, however, temperature was not increased to any marked extent by the brighter conditions. For about three weeks after the 4th the afternoon maxima were frequently below 60°, on the 17th as low as 51° at Bradford, Burnley, Darwen and Morpeth, and 50° at Huddersfield. Night minima below 40° were also rather frequent, 32° at Ackworth, 21st, and Wokingham, 22nd; 31° at Llangammarch Wells, 15th; and 29° at Wokingham, 7th. Towards the end there came a decided rise of temperature, and maxima of 80° and upwards were again registered at a number of stations, 84° at Isleworth, 29th and 30th; and 87° at Carlisle, 28th.

During the night of the 30th and following nights unusual luminosity was noticeable in the northern sky, and was commented on by observers in all parts of the country.

Fog was rather frequent on the western coasts, and especially from the 1st to 4th, and 22nd to 27th; along the English Channel it occurred but rarely; while on the east coast of Britain there were several reports in the first three days, then a clear period up to the close of the 22nd, and during the next week there were a number of reports of fog daily.

The temperature of the sea water round our coasts was several degrees warmer than in May, but in nearly all localities it was cooler than the air on shore, by as much as 5° locally off the north-east of England.

Rainfall.—There was an excess of precipitation at most stations in the western half of Scotland, the North-west of England and the North of Ireland, a deficiency over the rest of the country. Glencarron received 6 ins., Killybegs 5·3 ins., and Kinlochewe (Ross), 5 in.. but in numerous instances the totals were less than an inch, only 0·4 in. at Newcastle-on-Tyne, Shaftesbury, Parkstone (Dorset), Weymouth and Plymouth. Rain fell on 20 days at Sumburgh Head, Balta Sound, Nairn and Malin Head, but at a very large number of places on less than 10 days, down to three days at Brighton, Totland Bay, Lournemouth, Weymouth and Portland Bill.

Bright Sunshine.—Locally in Scotland and Ireland the duration of bright sunshine was less than the average, the difference at Stornaway amounting to 41 hours, but generally there was an excess, of more than two hours per day in places, nearly three hours per day at Ventnor. The largest aggregate was 301 hours, or 62 per cent. of the possible duration, at Worthing ; the smallest, 144 hours, or 27 per cent., at Stornoway.

TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

Prepared in the Meteorological Office under the direction of W. N. Shaw, LL.D., Sc.D., F.R.S.

In compiling the following Tables (pp. 80 to 89) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South-East; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 13.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

The stations selected, with the names of the Observers, are shown below.

LIST OF STATIONS AND OBSERVERS.

Station.	Observer.	Station.	Observer.
1. LONDON:—		4. ENGLAND, E.:—	
Tottenham ..	J. F. Butler-Hogan, M.D., LL.B., for Urban District Council.	Cromer ..	W. H. Archer, for Urban District Council.

* The Summary for "London" is for three calendar months. The "difference from average" is computed from the data for Camden Square, Norwood, and Kew, the averge used being that for the 35 years 1871-1905. A comparison with the averages for 65 years 1841-1905 for the Royal Observatory, Greenwich, is given in the following tables.

For corresponding values for the years since 1878, *see* Appendix I. to the Weekly Weather Report of the Meteorological Office, 1908.

NOTES ON THE STATISTICAL TABLES.

Hours of Observation.—Observations are made at 8 a.m. and 6 p.m. G.M.T. at telegraphic reporting stations (8 a.m. and 8 p.m. at Oxford), and at 9 a.m. and 9 p.m., mean local time, at normal climatological stations. The names of normal climatological stations are printed in heavy type. Observations are taken at 9 a.m. only at *Brighton*, *Coventry*, *Llangammarch Wells* and *Portsmouth*, and at 9 a.m. and 6 p.m. at *Ventnor*. At the telegraphic reporting stations, the names of which are printed in ordinary type, the results given under hygrometer and cloud are based on the morning observations only.

Barometer.—The correction for latitude has not been applied. The values are for station level. They are the means of readings at 8 a.m. and 6 p.m., or at 9 a.m. and 9 p.m. respectively, except in the cases of Brighton, Coventry, Llangammarch Wells, Portsmouth and Ventnor, where they are the means of the observations at 9 a.m.

Rainfall.—The amounts are for the 24 hours commencing at the time of morning observation.

Weather Phenomena.—The number of days of Rain, Snow, Hail, Thunderstorm, Fog and Gale are counted irrespective of the hours at which the phenomena occur. Except in the case of rainfall (see above) the day is the civil day. A day is reckoned as a day of "clear sky," if the mean of the estimates of the "amount of cloud" at the two hours of observation is less than 2, and as an "overcast" day if the mean is greater than 8.

Wind Summaries.—The results given under wind direction, and the number of observations of calms and of fresh or strong wind, are based on the observations at fixed hours taken twice a day. At Brighton, Coventry, Llangammarch Wells, Portsmouth, and Camden Square, where observations of wind (and cloud) are taken only once a day, the observer's results have been multiplied by 2, in order to render them more nearly comparable

with those for other stations. At Ventnor the results are based on observations at 9 a.m. and 6 p.m. (January 3 p.m.). At Falmouth, Kew and Stonyhurst the wind observations are based on the records of a standard Robinson anemometer (factor 2·2). (At Plymouth and Southport the equivalent values are obtained from a Dines Pressure Tube Anemometer.) Velocities of between 13 and 38 miles in the hour have been entered as "fresh or strong winds," velocities of 39 miles in the hour, or above, as gales. *See* a Report by the Director of the Meteorological Office entitled "The Beaufort Scale of Wind Force ... ." Official No. 180.

Averages.—The averages used are—Temperature and Rainfall for the 35 years 1871–1905; Bright Sunshine for the 25 years 1881–1905. The values are published in Appendix III. to the Weekly Weather Report of the Meteorological Office for 1906.

Royal Observatory, Greenwich.—The averages for Temperature and Rainfall, with which the current values are compared, are for the 65 years 1841–1905. The averages for sunshine are for the period 1897–1906. The earth temperatures are taken at a depth of 3 ft. 2 ins. The daily rainfall amounts are those for the 24 hours comprising the civil day. The numbers of days in each month of the quarter which were persistently overcast from midnight to midnight were 1, 0, 0, the number of persistently cloudless days were 0, 0, 0, the number of persistently foggy days were 0, 0, 0.

Mean Values for Districts.—The monthly mean values for districts for temperature, rainfall and sunshine are computed from the data for those stations which are included in the Weekly Weather Report of the Meteorological Office. The selection of stations is not identical with that included in this Report. The district values, as quoted, are comparable with the statistics published in previous issues of the Weekly Weather Report of which a Summary is in course of preparation. The averages with which the current district values are compared are for the 25 years 1881–1905. The district values for amount of cloud and earth temperatures are taken from the Monthly Weather Report of the Meteorological Office.

INDEX OF REGISTRATION DISTRICTS.

The following Index furnishes a reference to the *Number** of each REGISTRATION DISTRICT. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.

INDEX OF URBAN DISTRICTS

As existing on 30th June, 1908, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked * have been created, and the boundaries of those marked † have been altered since the Census of 1901. The exact constitution of each Urban District and of each Registration Sub-district at the time of the last Census is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,169 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 152 were each co-extensive, at the end of June, 1908, with one or more Registration Areas.

QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, DISTRICTS, AND SUB-DISTRICTS OF

ENGLAND AND WALES;

WITH TABLES SHOWING BIRTHS, DEATHS, AND NOTIFIED CASES OF INFECTIOUS DISEASE IN CERTAIN LARGE TOWNS.

Published by Authority of the Registrar-General.

Printed under the Superintendence of His Majesty's Stationery Office,
AND SOLD BY WYMAN AND SONS, LTD., FETTER LANE, E.C.

No. 239.] **Marriages**—*April*, *May*, *June*, 1908.
Births and **Deaths**—*July*, *August*, *September*, 1908. [Price 9*d*.

General Register Office, Somerset House,
27th October, 1908.

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1908 is estimated at 44,539,593 persons; that of England and Wales at 35,348,780, that of Scotland at 4,826,587, and that of Ireland at 4,364,226.

In the United Kingdom 295,052 *births* and 146,239 *deaths* were registered in the three months ended 30th September 1908. The natural increase of population was, therefore, 148,813. The number of *persons married* in the quarter ended 30th June 1908 was 174,186.

The birth-rate in the United Kingdom in the *third* quarter of 1908 was 26·3, and the death-rate 13·0, per 1000 of the estimated population. The marriage-rate in the *second* quarter of 1908 was 15·7 per 1000.

The facts, in detail, concerning Scotland and Ireland, are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Passenger Movement.

According to a Return issued by the Board of Trade it appears that in the three months ended 30th September 1908, the total passenger movement to and from places out of Europe showed a net balance outward of 39,263 passengers, compared with a net balance outward of 100,462 passengers in the corresponding period of the previous year.

3000 Wt 36 11/08 D & S 3 33664

The net outward balance among persons of British origin amounted to 32,115 persons. Of these 21,754 were English, 556 Welsh, 7,573 Scottish, and 5,407 Irish passengers, whilst there was an inward balance of 3,175 British Colonial passengers. Compared with the numbers in the corresponding period of last year the net outward balance of English, Welsh, and British Colonial passengers showed a decrease of 60 per cent., that of Scottish a decrease of 36 per cent., and that of Irish a decrease of 61 per cent.

Among persons of foreign origin there was a net balance outward of 7,148, against a net balance outward of 28,107 in the corresponding period of the previous year.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,027 registration sub-districts of England and Wales in the three months ended 30th September 1908 ; and the MARRIAGES in 15,686 churches or chapels, in 15,144 registered places of worship unconnected with the Established Church, and in 633 Superintendent Registrars' Offices, in the three months ended 30th June 1908.

Marriages.

In the *second* quarter of 1908 the marriages of 146,786 persons were registered, being equal to an annual rate of 16·7 persons married per 1000 of the estimated population, against an average rate of 17·1 per 1000 in the second quarters of the ten years 1898–1907.

Among registration counties with populations exceeding 100,000, the lowest marriage-rates were 12·3 in Cambridgeshire, 12·5 in Carnarvonshire, 12·6 in Suffolk, 13·6 in Kent, and 13·7 in Sussex, in Essex, and in Norfolk ; the highest rates were 18·2 in Warwickshire, 18·3 in the West Riding of Yorkshire, 18·5 in Leicestershire, 18·9 in Nottinghamshire, 19·3 in Lincolnshire, and 20·3 in Monmouthshire.

Births.

The births registered in the *third* quarter of 1908 numbered 236,877, and were in the proportion of 26·6 annually per 1000 of the population ; this is 1·6 per 1000 below the mean birth-rate in the ten preceding third quarters. In registration counties with populations exceeding 100,000 the lowest birth-rates during the quarter were 20·2 in Sussex, 20·9 in Carnarvonshire, 21·6 in Devonshire, 21·7 in Somersetshire, 22·1 in Northamptonshire and 22·2 in Dorsetshire ; the highest rates were 30·0 in Staffordshire, 30·4 in Nottinghamshire and in Northumberland, 34·4 in Durham, 34·5 in Glamorganshire, and 36·5 in Monmouthshire.

In 76 great towns the birth-rate averaged 26·9 per 1000, ranging from 15·4 in Hastings, 16·8 in Bournemouth, 17·5 in Hornsey, and 17·9 in Halifax, to 34·1 in Tynemouth, 35·0 in Warrington, 35·3 in St. Helens, 36·3 in Middlesbrough and in Merthyr Tydfil, and 40·4 in Rhondda. In 142 smaller towns the mean birth-rate was 26·1 per 1000, and in the remainder of England and Wales, excluding the 218 chief towns, it was 26·4.

Natural Increase of Population.

The natural increase of population in England and Wales last quarter by excess of births over deaths was 123,197, against 114,470, 105,266, and 123,559 in the third quarters of 1905, 1906, and 1907 respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 34*s.* 8*d.*, 33*s.* 2*d.*, and 32*s.* 1*d.* respectively in the preceding three quarters, was 31*s.* 2*d.* last quarter. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, 4*d.*; of prime beef, 7⅜*d.*; of inferior mutton, 5⅜*d.*; of prime mutton, 8⅝*d.* Compared with the average prices in the preceding three months, the mean price of inferior beef showed a decrease of ⅜*d.*, while that of prime beef remained unchanged. The mean prices of inferior mutton and of prime mutton showed respectively an increase of ⅛*d.* The average price in the London Market of sea-borne coal put in barge from the collier in the Thames was 16*s.* 11*d.* per ton, against 20*s.* 4*d.* per ton in the third quarter of 1907. The mean price of Consols was 86*l.* 11*s.* 3*d.*, having been 87*l.* 1*s.* 1*d.* in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England was 2*l.* 10*s.*, having continued at this figure since 28th May, 1908.

The average number of paupers relieved in England and Wales on the last day of each week in the quarter was 772,458, exclusive of lunatics in county and borough asylums, registered hospitals and licensed houses, of casual paupers, of persons receiving out-door medical relief only, and of patients in the fever and small-pox hospitals of the Metropolitan Asylum District. Of these 772,458 persons, 253,234 received in-door, and 519,224 out-door, relief. The proportion of the population in receipt of poor-law relief was 21·9 per 1000, against 21·7 and 21·5 per 1000 respectively in the third quarters of 1906 and 1907.

Meteorology.

A detailed report, prepared in the Meteorological Office, on the weather over the United Kingdom in the past quarter, with a table of Monthly Results for a number of stations in England and Wales, will be found on pp. 72–89.

Over by far the greater portion of England the quarter was distinguished by a decided preponderance of fine, dry weather, but the brilliant sunshine which prevailed so commonly was accompanied, as a rule, by a striking rarity of extreme summer heat. In the second and third weeks of July, however, and again from the middle of August until very nearly the middle of September, the weather was of an entirely different character, the thermometer being mostly below the average, and rain frequent, with occasional thunderstorms in all districts. Towards the close of the quarter a decided improvement took place, and at the very end of September a spell of warmth of exceptional intensity for the time of year was experienced over the whole country. In Ireland and Scotland the weather of the three months was far less settled than in England and Wales, and in the extreme west and north the conditions were mostly changeable and showery.

July opened with a continuance of the fair weather which prevailed so commonly in the latter half of June, the highest temperatures of the whole summer being recorded on the 2nd or 3rd of the month, when the thermometer rose to between 80° and 85° in nearly all inland parts of the United Kingdom. In a few isolated places the latter point was exceeded, and at Dumfries a maximum of 91° was recorded. After a short period of close, thundery weather the conditions became extremely cool and unsettled, with frequent heavy falls of rain, especially over the southern half of the country.

The heaviest rains occurred in South Wales on the 9th or 10th, in the south and east of England on the 12th or 13th, and in many scattered parts of the country on the 16th or 17th. From the 18th to the end of the month the weather was mostly fair or fine but, with a cool breeze coming usually from the West or North-West, the thermometer failed to rise to any very high level for the time of year.

August. Over the greater part of England the type of weather prevalent in the second half of July continued throughout the first fortnight of August. Between the 2nd and 4th, and again on the 7th, the thermometer rose above 80° in several parts of the country, and on the 3rd it exceeded 85° at one or two places in the south-east of England. The nights were unusually mild, but a sharp ground frost occurred over North Britain on the night of the 11th–12th, and as far south as the English Midlands on that of the 16th–17th. After the middle of the month the weather was cool and changeable, with heavy falls of rain in Ireland and the west of England on the 20th, locally in various parts of England and Ireland on the 22nd, and in several isolated places between the 24th and 26th. After the 26th, thunderstorms occurred very commonly, and on the last day of the month when a deep storm system came in from the Atlantic, heavy rain fell in the western districts, and a strong gale from between South-East and South-West sprang up on many parts of our western and southern coasts.

September was for the most part cool and rather changeable, but at times the thermometer rose to a fairly high level, the warmest periods occurring about the 7th or 8th, between the 17th and 20th, and at the close of the month. On the 30th the shade temperature exceeded 75° over a large portion of Great Britain, and reached 80° or more at several English stations, the readings being in many cases the highest on record for so late a period in the year. A barometrical depression which travelled slowly north-eastwards across the United Kingdom during the second week was attended by heavy and continuous rains in the Northern parts of Ireland and Scotland, and in the rear of the disturbance a cool wind from the North-West sprang up, with thunderstorms and falls of hail or sleet in places. Snow flakes were observed at Liverpool on the 10th, and at Berkhampsted on the 11th, a violent thunderstorm and a torrential fall of rain and hail being experienced on the latter day at Canterbury, where one station recorded more than 3 inches of rain.

In the quarter as a whole the *mean temperature* was below the average, the deficit being small in the south-western and north-eastern districts, but rather large in England South-east. The highest readings were observed as a rule on July 2nd or 3rd, when the thermometer rose to 85° and upwards in several parts of Great Britain, and reached a maximum of 91° at Dumfries. Next to this the warmest weather occurred on August 3rd or 7th, maximum temperatures exceeding 80° being recorded on each occasion in several parts of Central and Southern England ; on the former date the thermometer at Maidenhead rose to 88°. The lowest readings occurred on September 12th or 13th, when the sheltered thermometer fell below 35° in many districts, and below the freezing point in several parts of Great Britain. On the surface of the grass a slight frost was experienced at many western and northern stations between July 5th and 7th, and a sharper frost on August 11th–12th, August 16th–17th, September 2nd–3rd, and September 11th–13th.

The *rainfall* of the quarter was slightly in excess of the average over the country generally, but was deficient in England North-east and the English Channel. Over the central and southern parts of England the number of days with a measurable quantity agreed very closely with the average, but in the northern and eastern districts it was above the normal, while in the

English Channel rain was less frequent than usual. The heaviest individual falls of anything like a general character occurred in various parts of England and Wales between July 9th and 17th, in Ireland and the west of England on August 20th, in Wales and the west of England on August 31st, and in the northern parts of Ireland and Scotland in the second week of September, principally on the 8th and 9th. At Ardross the total fall on September 8th and 9th was as much as 4·9 inches, and at Killibegs the aggregate for the three days September 7th to 9th amounted to 4·7 inches. Extremely heavy falls were experienced locally in the south-east of England on July 13th and September 11th ; on the former date 2·65 inches fell at Herne Bay in the space of 3½ hours, while on the latter date Canterbury was visited by a thunderstorm which deposited at one station in the city nearly 2·0 inches, and at another station further south nearly 3·2 inches. From the middle of July to the middle of August many places reported an entire absence of rain, and at some southern stations the drought extended over periods ranging between 30 and 35 days.

The *duration of bright sunshine* agreed precisely with the normal in England Central and the English Channel, and was very nearly equal to the average in the London district. In the south-east of England and in the western parts of the country generally there was a rather large excess, while in England North-east there was a fairly large deficiency. The sunniest week in the quarter was that ending with August 1st when more than 60 per cent. of the possible duration was recorded in most of the English districts, and more than 70 per cent. in England East and England South-east.

Deaths.

The deaths registered in England and Wales last quarter numbered 113,680, and were in the proportion of 12·8 annually per 1000 persons living, or 2·7 per 1000 below the mean rate in the ten preceding third quarters. In registration counties with populations exceeding 100,000, the death-rates ranged from 9·5 in Northamptonshire, 9·6 in Buckinghamshire, 9·7 in Hertfordshire, 9·9 in Middlesex, 10·0 in Bedfordshire, and 10·1 in Sussex, to 15·0 in the North Riding of Yorkshire, 15·1 in the East Riding of Yorkshire, 15·2 in Durham, 15·3 in Northumberland, 15·4 in Glamorganshire, and 15·5 in Lancashire.

The 113,680 registered deaths included 59,879 of males and 53,801 of females, the death-rate among males being 13·9, and that among females 11·7, per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding third quarters, the death-rate of males showed a decrease of 2·9, and that of females a decrease of 2·6 per 1000 living. Out of equal numbers living, the deaths of males were to those of females as 119 is to 100 ; the mean proportion in the third quarters of the ten preceding years having been 117 to 100.

Urban and Rural Mortality.

In 76 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1908 is estimated at about sixteen and a quarter millions, the death-rate calculated without reference to sex and age constitution of the populations was 13·3 per 1000 living ; the rates in the three preceding third quarters had been 15·2, 16·2 and 12·2. The crude rates in the several towns ranged from 6·7 in Hornsey, 8·0 in Willesden, 8·5 in Walthamstow, and 8·7 in Hastings, in Reading, and in Handsworth (Staffs.), to 18·0 in Bootle, 18·1 in Merthyr Tydfil, 18·6 in Wigan, 19·0 in Middlesbrough and in Rhondda, and 19·9 in Stockport.

In 142 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at nearly five millions, the crude death-rate was 12·1 per 1000 living; the rates in the three preceding third quarters had been 13·3, 14·4, and 11·6.

In the remainder of England and Wales, with an aggregate population estimated at more than fourteen millions, of whom nearly six and a half millions live in small towns, and more than seven and a half millions in rural districts, the crude death-rate was 12·4 per 1000 living; the rates in the three preceding third quarters had been 13·0, 13·5, and 12·1.

The crude death-rate, that is the proportion of deaths from all causes to each thousand of the population, is a fairly trustworthy test of relative mortality when death-rates for short periods in the same area are compared, but when one area is compared with another, crude death-rates should be supplemented by rates in which the sex and age constitution of the respective populations is taken into account. The following statement shows the crude and corrected death-rates in each of the above areas. (See also Table III. page xv.)

September Quarter, 1908.

	Crude Death-rates.	Corrected Death-rates.
England and Wales	12·8	12·8
76 Great Towns	13·3	14·1
142 Smaller Towns	12·1	12·6
England and Wales, less the 218 Towns	12·4	11·7

It should further be stated that owing to the difficulty of distributing to their proper areas deaths occurring in public Institutions the death-rate in the rural area may possibly be somewhat over-stated.

Mortality at Different Ages.

Of the 113,680 deaths registered last quarter, 29,861 were those of infants under one year of age, 49,539 those of persons aged between one year and sixty years, and 34,280 those of persons aged sixty years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was equal to 126 per 1000, the average in the ten preceding third quarters having been 175. Among registration counties with populations exceeding 100,000, the lowest proportions were 58 in Berkshire, 60 in Wiltshire, 63 in Hertfordshire, 64 in Suffolk, and 66 in Buckinghamshire and in Dorsetshire. The highest proportions were 154 in Durham, 161 in Northumberland, 164 in Lancashire, 169 in Glamorganshire, and 170 in the East Riding of Yorkshire.

In the 76 great towns infantile mortality averaged 145 per 1000 births, being 19 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 42 in Hastings, 46 in Reading, 57 in Bournemouth, 69 in Hornsey, 79 in Portsmouth, and 82 in Kings Norton; the highest were 210 in Wigan, 213 in Hull, 215 in Bolton, 238 in Stockport, 246 in Rhondda, and 258 in Burnley. Among the 142 smaller towns infantile mortality averaged 130 per 1000 births, ranging from 33 in Bromley, 34 in Watford, 41 in Winchester, 47 in Lowestoft, 48 in Royal

Leamington Spa, and 49 in Beckenham, to 242 in Tunstall and in Ince in Makerfield, 244 in Doncaster, 272 in Gorton, 288 in Burslem, 294 in Stalybridge, and 420 in Farnworth. Excluding these 218 towns, infantile mortality in the remainder of England and Wales was in the proportion of 102 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 6·2 per 1000 of the estimated population at this group of ages, being 1·1 below the mean rate in the ten preceding third quarters. In the 76 great towns the mean mortality at this age-group was 6·6 per 1000, ranging from 3·3 in Hornsey, 3·5 in Willesden and in Handsworth (Staffs.), 4·4 in Norwich and in Devonport, and 4·5 in Croydon, in Walthamstow, in Hastings, and in Aston Manor, to 8·9 in Manchester, 9·0 in Wigan and in Salford, 9·4 in Bootle, 9·5 in Stockport and in Liverpool, 10·1 in Middlesbrough, and 10·2 in Oldham. In the 142 smaller towns the mortality at this age-group averaged 5·7 per 1000.

Among persons aged sixty years and upwards the mortality was at the annual rate of 52·0 per 1000 of the estimated population at this group of ages; the mean rate in the ten preceding third quarters having been 53·0. In the 76 great towns the mean mortality at this age-group was 53·5 per 1000; the lowest rates were 33·2 in West Hartlepool, 39·8 in Leyton, 40·1 in Hornsey, 40·9 in Hastings, 42·5 in Rotherham, 43·5 in Reading, and 44·0 in Aston Manor; the highest rates were 66·8 in Bradford, 67·2 in Bolton, 69·8 in Stockport, 73·4 in Wigan, 73·6 in Hanley, and 82·9 in Rochdale. In the 142 smaller towns the rate averaged 52·2 per 1000.

Compared with the mean rates in the ten preceding third quarters, the mortality of infants under one year of age showed a decrease of 28 per cent., that of persons between one year and sixty years of age a decrease of 15 per cent., and that of persons aged sixty years and upwards a decrease of 2 per cent.

Mortality from certain Epidemic Diseases.

The 113,680 deaths from all causes include—

11,119	that were attributed to		diarrhœa,
1,593	„	„	whooping-cough,
1,129	„	„	measles,
1,057	„	„	diphtheria,
625	„	„	"fever,"
602	„	„	scarlet fever,
3	„	„	small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 16,128 deaths were referred last quarter, being in the proportion of 1·82 per 1000 of the estimated population, or 1·15 per 1000 below the average proportion in the corresponding quarters of the previous ten years.

The rates of mortality from these diseases were in all cases below the decennial averages.

Diarrhœa was the assigned cause of 11,119 deaths last quarter, corresponding to an annual rate of 1·25 per 1000, which is lower by 0·82 per 1000 than the decennial average rate for the third quarter of the year. In three counties no deaths from diarrhœa were returned last quarter. Among counties with populations exceeding 100,000 persons the highest death-rates were 1·84 in the North Riding of Yorkshire, 1·94 in Warwickshire, 2·03 in Lancashire, 2·13 in Durham, 2·31 in Glamorganshire, and 2·56 in the East Riding of Yorkshire. In the 76 great towns the average death-rate from

diarrhœa was 1·71 per 1000. Among these towns the rate was highest in Walsall 3·24 per 1,000, Stockport 3·41, Hull 4·20, Middlesbrough 4·38, Burnley 4·50, and Rhondda 6·09. In the 142 smaller towns diarrhœa was fatal on the average to 1·25 per 1000 of the population, and caused the highest mortality in Pontypridd, Oldbury, Gorton, Ince in Makerfield, and Farnworth. In the remainder of England and Wales the death-rate from diarrhœa averaged 0·73 per 1000. Among registration sub-districts outside the 218 chief towns diarrhœa was exceptionally fatal in Northfleet, Castleford, Wingate, Winlaton, and Ashington.

In accordance with precedent, special tables relating to summer mortality from diarrhœa have been inserted in the present Return (*see* Tables XIII–XV).

Whooping-cough accounted last quarter for 1,593 deaths, and for a death-rate of 0·18 per 1000 annually, which is below the average rate in the ten previous corresponding quarters by 0·06 per 1000. No deaths from whooping-cough were registered last quarter either in Pembrokeshire or in Anglesey. Among counties with populations exceeding 100,000, the lowest death-rates from this cause were 0·04 in Berkshire and 0·06 in Bedfordshire ; the highest death-rates were 0·32 in Dorsetshire, 0·35 in Monmouthshire and in Denbighshire, 0·43 in Northumberland, 0·46 in Cumberland, and 0·51 in Carnarvonshire. In the 76 great towns, whooping-cough caused an average death-rate of 0·18 per 1000 living. No death from this disease occurred in four of these towns during the quarter, and the rate did not exceed 0·03 either in Leicester or in Derby, but it was equal to 0·40 in Bournemouth and in Halifax, 0·42 in Burnley, 0·50 in Salford, 0·56 in Coventry, 0·57 in Walsall, and 0·75 in Stockton on Tees. In the 142 smaller towns the average death-rate from whooping-cough was 0·19 per 1000, the disease being especially fatal in Barnsley, Gorton, Abertillery, Poole, Folkestone, and Workington. In the remainder of England and Wales, whooping-cough caused an average mortality of 0·18 per 1000 annually. Among registration sub-districts outside the 218 chief towns, whooping-cough was exceptionally fatal in Keynsham, Gresley, Lathom, Castleford, Blyth, Bedlington and Carnarvon.

Measles was returned as the cause of 1,129 deaths last quarter, corresponding to an annual rate of 0·13 per 1000 of the population, or 0·11 per 1000 below the average in the third quarters of the preceding ten years. Of the 55 registration counties, ten were free from measles fatality, and the death-rate did not exceed 0·01 per 1000 either in Berkshire, in Wiltshire, in Cornwall, or in Northumberland. Among counties with populations of more than 100,000, the highest death-rates from this disease per 1000 of the respective populations were 0·21 in London and in the North Riding of Yorkshire, 0·22 in Lancashire, 0·26 in Cheshire, and 0·29 in Essex. In the 76 great towns measles caused an average mortality of 0·19 per 1000. In 26 of these towns no deaths from this disease were registered during the quarter. The highest death-rates were 0·53 in Bootle, 0·60 in West Ham, 0·68 in Bury, 0·86 in Stockport, 0·90 in Rochdale, and 1·04 in Oldham. In the 142 smaller towns, measles was fatal on the average to 0·09 annually per 1000 living, and among these towns showed exceptional fatality in Aberdare, Barnsley, Jarrow, Chadderton, Poole, and Middleton. In the remainder of England and Wales the average measles death-rate was 0·07 per 1000. Among registration sub-districts outside the 218 chief towns, measles was especially fatal in Congleton, Walton le Dale, Kirkheaton, and Gower Eastern.

Diphtheria (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 1,057 deaths, a number corresponding to an annual rate of 0·12 per 1000 living, which is below the average rate in

the ten previous corresponding quarters by 0·06 per 1000. In three counties no deaths from this disease occurred last quarter. Among counties with populations exceeding 100,000, the highest death-rates from this disease were 0·17 in Hampshire and in Cambridgeshire, 0·18 in Norfolk and in Herefordshire, 0·19 in Berkshire, and 0·28 in the North Riding of Yorkshire. The average death-rate from diphtheria in the 76 great towns was equal to 0·12 per 1000 of their aggregate population. No death from this disease occurred in six of these towns. The highest death-rates were 0·29 in Reading and in Smethwick, 0·31 in East Ham and in Kings Norton, 0·32 in Salford, and 0·34 in Warrington. In the 142 smaller towns the mortality from this disease averaged 0·11 per 1000, the rate being highest in Eastbourne, Chester, Llanelly, Enfield, and Ebbw Vale. In the remainder of England and Wales, diphtheria was fatal in the average proportion of 0·12 per 1000 living. Among registration sub-districts outside the 218 chief towns, diphtheria was especially fatal in Ringwood, Winterton, Rivington, Skelton (Guisborough), and Knighton.

"*Fever*" (including the three chief forms—*typhus*, *enteric fever*, and '*pyrexia*' of uncertain origin) was the registered cause of 625 deaths last quarter, equal to an annual death-rate of 0·07 per 1000 of the population, or 0·06 per 1000 less than the average in the third quarters of the previous ten years. In ten counties no deaths from fever were returned last quarter; among counties with populations exceeding 100,000, the highest death-rates were 0·13 in Lincolnshire, 0·15 in Suffolk, in the North Riding of Yorkshire, and in Durham, 0·16 in Monmouthshire, and 0·22 in Norfolk. In the 76 great towns fever caused an average mortality of 0·06 per 1000 annually. In eighteen of these great towns no deaths from fever occurred; the towns with the highest fever death-rates were Burton on Trent, Grimsby, and Bolton where the rate was 0·22 per 1000, Great Yarmouth and Middlesbrough 0·23, Wigan 0·31, and Norwich 0·33. In the 142 smaller towns fever caused an average mortality of 0·08 per 1000 annually, the rate being highest in Ince in Makerfield, Radcliffe, and Lowestoft. In the remainder of England and Wales, the death-rate from fever averaged 0·08 per 1000. Among registration sub-districts outside the 218 chief towns, fever was especially fatal in Pontefract and in Dawdon.

Scarlet fever accounted last quarter for the deaths of 602 persons, equal to a rate of 0·07 per 1000 living, or 0·03 per 1000 less than the decennial average rate for the third quarter. Thirteen of the counties of England and Wales were free from scarlet fever mortality throughout the quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·10 per 1000 in Cheshire, 0·11 in Staffordshire and in Worcestershire, 0·14 in Lancashire, and 0·15 in Middlesex. In the 76 great towns scarlet fever accounted for an average mortalityof 0·09 per 1000 annually. No deaths from this disease were recorded in twenty of these towns. The highest scarlet fever death-rates were 0·21 in Blackburn, 0·22 in East Ham and in Salford, 0·23 in West Bromwich, 0·30 in St. Helens, 0·32 in Liverpool, 0·35 in Bootle, and 0·53 in Smethwick. In the 142 smaller towns scarlet fever was fatal in the average proportion of 0·05 per 1000 living, and caused the highest mortality in Acton, Barnsley, and Rowley Regis. In the remainder of England and Wales this disease caused an average death-rate of 0·05 per 1000 living. Among registration sub-districts outside the 218 chief towns, scarlet fever was exceptionally fatal in Ecclesfield and in Wath.

Three deaths from *small-pox* were registered last quarter. The deaths in the four quarters immediately preceding having numbered 0, 0, 0 and 9 respectively. Of the 3 deaths from small-pox registered last quarter, 1 occurred in Cheshire, 1 in Lancashire, and 1 in the West Riding of Yorkshire.

Violent Deaths.

The deaths in England and Wales referred to different forms of violence either accidental or otherwise, numbered 4,944 last quarter, and corresponded to an annual rate of 0·55 per 1000 of the population, which is 0·04 below the average in the ten preceding third quarters. In registration counties with populations exceeding 100,000, the lowest death-rates from violence were 0·35 in Wiltshire and in Herefordshire, 0·40 in Cumberland, 0·41 in Hertfordshire, 0·42 in Derbyshire, and 0·43 in Sussex and in Essex; the highest rates were 0·70 in Monmouthshire, 0·71 in Nottinghamshire, 0·77 in Shropshire and in Carmarthenshire, 0·81 in Oxfordshire, and 0·96 in Glamorganshire. In the 76 great towns the mean rate was 0·51 per 1000 living; among the several towns the rate was only 0·10 in Aston Manor, 0·18 in Handsworth (Staffs.) and in Walthamstow, 0·20 in Bury, and 0·22 in Hornsey; but it rose to 0·84 in Warrington, 0·88 in Rotherham and in Merthyr Tydfil, 0·90 in Swansea, and 1·02 in Tynemouth.

Certification of Causes of Death.

Of the 113,680 deaths registered in England and Wales last quarter, the causes of 103,815, or 91·3 per cent., were certified by registered medical practitioners, and the causes of 8,362, or 7·4 per cent., by coroners after inquest; whilst the causes of the remaining 1,503, or 1·3 per cent., were not certified, the average percentage of uncertified deaths in the ten preceding third quarters having been 1·5. Among registration counties with populations exceeding 100,000, the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Middlesex, Wiltshire, Devonshire, Cornwall, Somersetshire, Gloucestershire, Leicestershire, Cheshire, the East and North Ridings of Yorkshire, and Glamorganshire, but it reached 3·0 in Herefordshire, 3·1 in Shropshire, and 3·4 in Derbyshire. In the 76 great towns the mean proportion of uncertified deaths was 0·9 per cent.; but whilst no uncertified deaths were registered in Croydon, Willesden, Tottenham, West Ham, East Ham, Walthamstow, Brighton, Southampton, Ipswich, Great Yarmouth, Plymouth, Devonport, Derby, York, or West Hartlepool, the proportion per cent. rose to 2·9 in Bootle, 3·5 in Birmingham, 3·7 in South Shields, 4·2 in Gateshead, and 4·5 in Warrington and in Preston.

Inquests.

Inquests were held in England and Wales concerning 8,362, or 7·4 per cent., of the total deaths, the mean proportion in the ten preceding third quarters having been 6·5 per cent. In the 76 great towns the proportion of inquest cases averaged 7·6 per cent., ranging from 2·0 in Bootle, 2·5 in Aston Manor, 2·7 in Handsworth (Staffs.), 3·1 in St. Helens, 3·5 in Gateshead, 3·8 in Northampton, 3·9 in Burnley, and 4·0 in Bury, to 10·0 in London, 10·2 in Swansea, 10·5 in Portsmouth, 10·7 in Great Yarmouth, 14·7 in Southampton, and 15·5 in Tottenham.

Deaths in Public Institutions.

The total deaths registered in England and Wales include 21,882, or 19·2 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding third quarters having been 15·4 per cent. In the 76 great towns the deaths in public institutions averaged 25·6 per cent. of the total deaths, the lowest percentages in the several towns being 8·4 in Gateshead, 9·5 in Handsworth (Staffs.), 10·2 in Aston Manor, 10·3 in Merthyr Tydfil, 10·4 in Walsall, and 10·6 in Bury; the highest percentages were 28·7 in Leyton, 28·8 in Willesden, 30·5 in Walthamstow, 35·5 in Liverpool, and 40·8 in London.

Edinburgh, Glasgow, Dublin, and Belfast.

The annual rates of birth and death per 1000 living in these towns last quarter were as follows :—

	Birth-rate.	Death-rate.
Edinburgh	21·7	13·1
Glasgow...	27·1	14·6
Dublin	29·1	19·9
Belfast	29·4	15·0

Colonial and Foreign Cities.

The Registrar-General has been favoured with returns of vital statistics by the authorities of 28 of the principal Colonial and Foreign Cities. From these a summary has been constructed for the past quarter (Table XVI.). Excluding the Indian cities, the highest and lowest annual rates of birth and death during the third quarter of 1908 were as follows :—

Birth-Rates.

	Highest per 1000 living.		Lowest per 1000 living.
Toronto	39·8	Brussels	15·7
Trieste	31·9	Paris	18·1
Breslau	30·8	Prague	20·0
Bucarest	30·3	Antwerp	21·0
New York	29·3	Berlin	22·1
Copenhagen	27·8	Vienna	22·2
		London ...	25·0

Death-Rates.

	Highest per 1000 living.		Lowest per 1000 living.
Rio de Janeiro	45·4	Amsterdam	10·5
Moscow	32·5	Antwerp	11·4
St. Petersburg	28·4	Stockholm	12·3
Bucarest	24·3	Brussels	12·6
Trieste	20·9	Chicago	13·4
Toronto	20·1	Christiania	13·8
		London ...	11·9

Small-pox caused 3452 deaths in Rio de Janeiro, 122 in Moscow, 49 in St. Petersburg, 14 in Christiania, and 1 each in Paris, in Berlin, and in New York.

Measles was most fatal, in proportion to population, in St. Petersburg, Moscow, Rio de Janeiro, Vienna, and Hamburg; *scarlet fever* in Bucarest, Prague, Trieste, St. Petersburg, and Moscow; *diphtheria* in Toronto, St. Petersburg, New York, Moscow, and Philadelphia; *whooping-cough* in Hamburg, St. Petersburg, Copenhagen, Christiania, and Philadelphia; "*fever*" in St. Petersburg, Bucarest, Toronto, New Orleans, and Venice; and *diarrhœal diseases* in Moscow, Bucarest, St. Petersburg, Trieste, Breslau, and New York.

Infantile Mortality.—Among those European cities for which the figures are available, the proportion of deaths of children under one year of age to 1000 registered births ranged from 76 in Stockholm, 87 in Amsterdam, and 110 in Paris, to 208 in Brussels, 224 in Trieste, 226 in Breslau, 233 in Berlin, and 261 in Bucarest.

INDIAN CITIES.—The death-rate was equal to 49·1 per 1000 in Madras, 30·7 in Bombay, and 19·9 in Calcutta. *Small-pox* caused 93 deaths in Bombay, 51 in Calcutta, and 1 in Madras; *measles* caused 30 deaths in Bombay, 10 in Madras, and 10 in Calcutta. Under the heading "*fever*" 1258 deaths were returned in Calcutta, 1,174 in Bombay, and 1,737 in Madras, including 185, 382, and 1 deaths from *plague* in Calcutta, in Bombay, and in Madras respectively. The mortality from *diarrhœal diseases* was excessive in all of these Indian cities; *Asiatic cholera* caused 843 deaths in Madras, 143 in Calcutta, and 10 in Bombay.

RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the third quarter of the year 1908 (*see* pages xxvii—xxxii); and in the two following Tables, these numbers have been reduced to rates per 1000 living in the several populations (*see* pages xxxiii—xxxviii).

TABLES.

TABLE I.—**Marriages, Births,** and **Deaths** registered in **England** and **Wales** in the Years **1898-1908,** and in each Quarter of those Years.

YEAR	1898	1899	1900	1901	1902	1903	1904	1905	1906	1907	1908
Marriages	255,379	262,334	257,480	259,400	261,750	261,103	257,856	260,742	270,038	276,088	—
Births	923,165	928,646	927,062	929,807	940,509	948,271	945,389	929,293	935,081	917,636	—
Deaths	552,141	581,799	587,830	551,585	535,538	514,628	549,784	520,031	531,281	524,311	—
Quarter ended the last day of	MARRIAGES.										
March	45,143	44,512	43,917	43,862	54,056	45,584	44,968	45,173	45,478	52,953	47,511

TABLE V.—**76 Great Towns.—Population; Births, Deaths,** and **Meteorology** in the 13 Weeks ended **26th September, 1908.**

NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The deaths in London have been corrected as far as possible (1) by excluding deaths of all non-Londoners, and (2) by including the deaths of Londoners occurring in Metropolitan Public Institutions situated outside the County. (See Table XII.) The deaths in the other towns have been corrected, as far as possible, for deaths occurring in Public Institutions; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been credited to the respective areas to which they belong.

TOWNS.	Estimated Population in the middle of 1908.	Births.	Deaths.	The Deaths registered include: Deaths of Infants under 1 Year of Age.	Deaths of Persons aged 60 Years and upwards.	Deaths from: Principal Epidemic Diseases.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhœa.	Violence.	Inquest Cases.	Deaths in Public Institutions.	Uncertified Causes of Death.	Mean Temperature (Degrees Fahr.). *	Rainfall (Inches). *	TOWNS.

* The values for Mean Temperature and Rainfall relate to the calendar quarter.

† The figures for Edinburgh and Glasgow are for the calendar quarter. In addition to the deaths in Col. 12 there were 7 deaths in Edinburgh and 39 in Glasgow registered as due to Cerebro-spinal meningitis, Epidemic Cerebro-spinal meningitis, Epidemic meningitis or Cerebro-spinal fever.

[a] Phœnix Park.

[b] Fitzwilliam Square.

NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The death-rate in London has been corrected as far as possible (1) by excluding deaths of all non-Londoners, and (2) by including the deaths of Londoners occurring in Metropolitan Public Institutions situated outside the County. (See Table XII.) The death-rates in the other towns have been corrected for deaths occurring in Public Institutions; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been credited to the respective areas to which they belong. Of the deaths excluded from London in 1905, only those which occurred in the London Fever Hospital, the Metropolitan Asylums Hospitals, and the Middlesex County Lunatic Asylum were added to the several parts of the Outer Ring.

TABLE VII.—**One hundred and forty-two smaller Towns.—Population; Births and Deaths in the QUARTER ended 30th September, 1908.**

NOTE.—The 142 Smaller Towns are those with populations of 20,000 but not exceeding 50,000 at the Census of 1901. The deaths in these towns have been corrected for deaths occurring in Public Institutions, while in addition the deaths occurring in London of all persons known to belong to towns in the Metropolitan Outer Ring have been credited to the several towns to which they belong.

The *Registration Districts*, 633 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

[a] See page 2, note [b].

[b] For London the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrars.

II.—SOUTH EASTERN COUNTIES.—Registration Districts.

No.	Registration Districts.	Area in Statute Acres.	Enumerated Population, 1901.	Marriages	Births	Deaths		The Deaths in the Quarter are stated by the Registrars to include												
				Registered in Quarter ended 30 June 1908.	Registered in Quarter ended 30 Sept. 1908.	*Average in Quarters ended 30 Sept. in the 3 Years 1905-07.*	Registered in Quarter ended 30 Sept. 1908.	Deaths of	Deaths from									Inquest Cases.	Deaths in Public Institutions.	Uncertified Causes of Death.

[a] The *Registration Sub-districts* (2027 in number) are sub-divisions of the *Registration Districts* in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; *F* a Hospital for Infectious Diseases; *H* another Hospital; and *L* a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

[b] See page 2, note [b].

[c] See page 6, note [b].

[a] See page 6, note [b].

* 29: 3, 4.—In consequence of an area having been assigned to the wrong ward at the Census of 1901, the populations of the sub-districts of Plumstead West and Plumstead East as altered on 1st March, 1908, were incorrectly stated in the last two Quarterly Returns. The revised populations are shown above.

II.—SOUTH EASTERN COUNTIES.—Registration Sub-districts.

No.	Registration Sub-districts.	Area in Statute Acres.	Enumerated Population, 1901.	Births: Registered in the Quarter ended 30 Sept. 1908. [a] 627: 3.—The 7 deaths from whooping-cough belonged to the Borough of Carnarvon.
[b] 628: 1.—Of the 4 deaths from whooping-cough, 3 belonged to the parish of Llanddaniel Fab.

CHANGES IN REGISTRATION DISTRICTS AND SUB-DISTRICTS IN THE QUARTER ENDED 30TH SEPTEMBER, 1908.

Changes in Registration boundaries are made by order of the Registrar-General, with the consent of the Local Government Board. Those changes which affect the boundaries of Registration Districts are necessitated by changes in the boundaries of Poor Law Unions.

METEOROLOGY.

Remarks on the Weather over the United Kingdom during the Quarter ended September 30th, 1908.

EXTRACTED FROM THE

MONTHLY WEATHER REPORTS

OF THE

METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 170 STATIONS,

TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 56 STATIONS IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

JULY, 1908.

Pressure, Winds and Weather.—The mean pressure results for the month of July were above the normal in all parts of the British Isles, the excess ranging from 0·05 in. in the south-east of England to 0·11 in. in the north-east of Scotland. Mean pressure was highest, above 30·1 ins. on the Bay of Biscay, and lowest, below 29·95 ins. in two northern areas, one extending eastward from Shetland across southern Scandinavia to Russia, the other occupying the southern portion of Iceland and the adjacent sea. The anticyclonic and the cyclonic systems which visited this country were of only moderate intensity, so that the range of pressure was nowhere large—about the English Channel it was less than an inch, 0·85 in. at Jersey, and only on the east coast of Scotland did it amount to as much as 1¼ in. As a whole, therefore, the conditions were of a very quiet type, calms and very light breezes from points in the South-West, North-West and North-East quarters being experienced pretty generally, and only on rare occasions did the wind increase to or exceed a strong breeze.

A closer inspection of the details shows that the month was divided into three well-defined weather periods. (1.) The anticyclonic distribution of pressure, with its attendant very fine, dry and sunny weather, which settled over the country about June 21st was maintained with only some minor modifications through the first seven days of July. On July 1st and 2nd the central space of the system covered the greater part of the British Isles, the barometer standing at about 30·4 ins. over a large area. At this time there was a depression of considerable extent over eastern Russia. On July 3rd both systems made a westerly movement, the pressure maximum being transferred to the Iceland region, and the minimum advancing to the neighbourhood of St. Petersburg. Winds from North-East and North were consequently felt in all parts of these islands, but the air current was very weak, few instances of so much as a moderate breeze being recorded. The accompanying weather was generally very fine, no rain falling over an extensive portion of the Kingdom during the first six days, and, in some localities, seven or eight days of the month. This drought had set in about June 17th, and its duration exceeded 15 days at a large number of stations, 19 days in many neighbourhoods, 20 days at Parkstone, Dorset, and 22 days at Totland Bay. High afternoon temperatures were registered, maxima of 80° and upwards being very commonly experienced in the opening days of July in England, Scotland and Ireland. A maximum of 86° was reached at Crieff, Newton Rigg and London (Camden Square) on the 2nd, and at Shrewsbury, Epsom and Killarney on the 3rd; 87° at Clifton and Camden Square on the 3rd; and 91° at Dumfries on the 2nd. Though the weather generally was so fine, the heat was associated with rather close, thundery conditions, and, with the exception of the 6th, thunderstorms or thunder alone occurred daily in various localities, and especially on the 3rd and 4th, when extensive areas of England and Ireland were affected. In many instances, however, the storms were rainless or produced very little precipitation, and only at Abersychan (Monmouth) on the 4th, was there as much as an inch of rain. At Camden Square on the same day 0·29 in. of rain fell in eight minutes. Unusually large hail, "size of small bullets" fell at Great Billing (Northampton) during one of the storms.

(2.) On the evening of the 7th the reports indicated the approach of a low pressure system from the Atlantic, and during the succeeding ten days the conditions were of a persistently unsettled cyclonic type. Three depressions moved across our northern districts to the North Sea, one entered the mouth of the English Channel and passed along Western France, and another formed over the eastern portion of the Channel and crossed the North Sea to Norway. The deepest were those which appeared off the north-west of Ireland on the 10th and the 16th respectively. In the former the barometer fell below 29·5 ins. over the northern half of the Kingdom, to 29¼ ins. at Malin Head. At some of the western and southern stations the South-Easterly to South-Westerly breeze increased to the force of a strong or high wind, but no gale was felt. The disturbance of the 16th-18th was a little deeper, pressure decreasing below 29¼ ins. at several northern stations, to 29·19 ins. at Aberdeen. This system produced the only gale force of the month, a strong South-Westerly gale being felt for a short time at Portland Bill late on the 16th; a North-Westerly gale at Malin Head on the evening of the 17th; and a Northerly gale at Holyhead on the morning of the 18th.

This disturbed period was marked by considerably lower afternoon temperatures all over the country. Rain and thunderstorms occurred practically every day in different districts. South Wales was visited by a heavy rainstorm on the 9th, the amounts measured ranging up to 1·4 in. at Swansea, and 1·6 in. at Llandovery and Llangammarch Wells, while Lampeter had 1·1 in. on the 9th, and 1·2 in. on the 10th. With and without thunderstorms, falls of an inch or more were registered on the 12th and 13th in the south and east of England, 1·8 in. at Norwich. At Herne Bay it was reported that 2·65 ins. fell in about three and a half hours on the morning of the 13th. Armagh Observatory experienced a fall of 1·5 in. of rain on the 13th, an inch of which fell in one hour. On the 16th and 17th, again with and without thunderstorms, there were further large falls at a number of stations scattered throughout England and Wales, ranging up to 1·5 in. at Swansea, 1·6 in. at Newport, and 2 ins. at Pant-yr-Eos (Mon.)

An interesting feature was associated with the formation of a disturbance on the English Channel on the 12th. At about 3 p.m. the barometer over southern England became violently agitated, falling and rising during three hours at unusually rapid rates. The weather was very dull and gloomy, the atmosphere exceedingly humid and oppressive, with rain varying locally from a slight drizzle to a steady heavy downpour, thunderstorms occurring along the south coast. There was hardly any wind. At the Kew Observatory the barometer fell 0·03 ins. from 3 to 3.10 p.m., followed by a slight recovery for about ten minutes ; in the next ten minutes it fell 0·04 in., then rose 0·05 in. in twenty minutes. It continued to rise slowly till about 4.30 p.m., then in the next 55 minutes it fell 0·13 in., and from 5.25 to 5.40 p.m. it rose 0·06 in. The appearance was thundery, but only 0·03 in. of rain fell. Temperature ranged from 67° at 3 p.m, to 63° at 5 p.m., and the breeze was very light from South to South-West. Similar oscillations were registered on the same day at Brussels and Copenhagen in the forenoon, and at Hamburg late in the evening.

(3.) The spell of unsettled weather came to an end about the 17th ; a high pressure system spread in from the Atlantic, and up to the close of the month anticyclonic fine weather conditions again prevailed. On the 28th and 29th the barometer reached 30·5 ins. in the south of England and of Ireland. In the last thirteen or fourteen days of the month no rain fell at many stations, and the amounts registered at others were generally very small, but 1·1 in. fell at Uldale (Cumberland) during a thunderstorm on the 25th, and at Killybegs on the 29th, when, also, 1·2 in. fell at Laudale. Afternoon temperatures of 80° and upwards were recorded at numerous stations in England on the 22nd, 24th, 25th, and 30th, Epsom touching 84° on the 30th.

Throughout the month the nights were of a singularly equable character as regards temperature, the minimum readings being nearly always between 50° and 60°, but Balmoral touched 32° on the 6th, Nairn at the same time sinking to 37°.

Fog was reported frequently on many parts of our coasts, most frequent in the west, least frequent in the east. On several occasions it was very dense locally, and occasioned considerable delay to shipping.

The temperature of the sea water round our shores was everywhere higher than in June, by as much as 5° in some neighbourhoods, and 6° at Stornoway. Off the west and north of Ireland, the south-east of England and the north of Scotland, the water was about the same temperature as, or a little warmer than, the air on shore, but in most localities it was cooler—by as much as 6° off the coasts of Aberdeen and Down.

Rainfall.—Owing to the local character of the thunderstorm rains between the 7th and 17th the distribution of precipitation was very irregular. The south-east and north-west of England had a fairly large excess, the English Channel had a deficiency of about an inch, and the north of Scotland of about 1½ in. The largest aggregates were 6 ins. at Darwen, and 5·6 ins. at Stonyhurst; the smallest, an inch at Portland Bill, and 0·8 in. at Jersey and Strathpeffer. Rain fell on 23 days at Blacksod Point and Killarney, against 10 days or less in many places, 7 days at Portland Biil and Ventnor.

Bright Sunshine.—Only in Ireland and the western half of England were the sunshine records generally above the average. Falmouth and the Isle of Man returned a deficiency of 28 hours, Marchmont and Strathpeffer 29 hours, and Greenwich 34 hours, while Woolacombe had an excess of 30 hours, and Valencia 42 hours. At Fort Augustus the month's aggregate was only 95 hours, or 18 per cent. of the possible duration, Balta Sound, Deerness and Strathpeffer returning 19 per cent. The following districts had 50 per cent. or more of the possible :—Rousdon, Jersey, Folkestone, Guernsey, Bournemouth, Portsmouth, Broadstairs, Dover, Ramsgate, and Totland Bay—the last-mentioned, with a total of 254 hours, had 52 per cent.

AUGUST, 1908.

Pressure, Winds and Weather.—In August the mean pressure was highest, 30·1 ins. and upwards, on the Bay of Biscay and out towards the Azores, and lowest, below 29·85 ins., over a very large area extending across southern Iceland eastward to Scandinavia and northern Russia. At all stations in the British Isles the results were above the normal, the excess being greatest, about 0·1 in., on the western and north-western coasts, and least, less than 0·05 in., in the east and south-east. The gradient, consequently, instead of being for South-Westerly to Westerly winds, was more in favour of a North-Westerly current, and there was a great prevalence of winds from this quarter, especially during the first three weeks. Compared with July there was an appreciable increase in the range of pressure, which exceeded an inch nearly everywhere ; at Sumburgh Head it was more than 1·5 in. This

indicated a gradual lapse into a more disturbed period of the year ; as the month was drawing towards its close strong or high winds became rather frequent, and in several instances gales were experienced.

Broadly speaking the month was made up of two well-marked types of weather. (1.) The high pressure system which arrived from the Atlantic shortly after the middle of July, and brought with it the fine weather of the remainder of that month, was maintained, with varying degrees of intensity, until August 20th, its central space sometimes over the British Isles, at others shifting about off the western and south-western coasts during the first half of the month, afterwards lying to the northward, between Norway and Iceland. Nearly throughout this period there was an area of low pressure over eastern Europe, mainly over northern Russia. The United Kingdom thus occupied a position between the high and low pressure systems, and received a great preponderance of winds from between West and North. On the 10th, during the passage of a depression from the neighbourhood of the Faröe to southern Norway, Denmark and Russia, a high South-Westerly wind was felt locally on our north-western coasts, but otherwise the country had little else than light to moderate breezes. But while the period was quiet enough, and the weather generally was fair with more bright sunshine than usual in nearly all localities, there was an almost entire absence of high day temperatures. Maximum shade readings of 80° and upwards occurred at a number of stations on the 3rd, when 83° was registered at Epsom and Greenwich, 84° at Cullompton and Raunds, and 88° at Maidenhead. Again, on the 7th, Southampton had 80°, Weymouth 81°, and Maidenhead 82°. As a general rule, however, the afternoon values were below rather than above 70°. The nights were usually mild, the minimum shade values being only rarely below 50°, but at some of the more exposed stations there were a few records below 40°, the lowest, 34° at Balmoral on the 6th, at Wick, Nairn, Newton Rigg and Wokingham on the 12th, and at Marlborough and Wokingham on the 17th ; 31° at Wick and Gordon Castle on the 13th ; and 30° at Balmoral on the 12th and 13th.

The most striking feature of this fine spell was the persistent absence of rain over an extensive portion of the Kingdom. The longest drought of the year, thus far, commenced on July 17th and 18th, when anticyclonic conditions were becoming established. Thenceforward, through a period of about five weeks, down to about August 19th, there was in most neighbourhoods either no rain at all or only a few trifling showers, although at Gruline, Mull, there was a fall of 1·1 in. on the 10th. In very numerous instances there was not a measurable quantity of rain on 20 or more consecutive days, none being registered at Parkstone, Dorset, during the 30 days, July 21st to August 19th ; at Southampton, Weymouth, Totland Bay, Portland Bill and Guernsey during the 32 days, July 18th to August 18th ; at Tonbridge during the 33 days, July 19th to August 20th ; and in the Forest of Dean during the 34 days, July 17th to August 19th. Many places had less than a quarter of an inch of rain in 30 days.

(2.) The break up of this long spell of dry anticyclonic weather was associated with a cyclonic system which appears to have taken definite form over Madrid on the evening of the 17th, remained over the northern half of the Peninsula during the next two days, and on the morning of the 19th it moved across the Bay of Biscay to a position off the mouth of the English Channel, the anticyclone at the same time diminishing in intensity and dispersing over Scotland by night. The pressure distribution now assumed a very unsettled type, the barometer being highest over the Spanish Peninsula and apparently to the northward and westward of Iceland. Down to the close of the month our weather was continuously under the influence of cyclonic systems, so that it was as unsettled, wet and windy as the preceding period had been fine, dry and quiet. During the 21st the depression which had come up from Spain remained over the Bristol Channel, then crossed to the Isle of Wight next morning, and in the course of the day it disappeared over the lower part of the North Sea. A high Easterly wind at Portland Bill was the strongest breeze reported, but thunderstorms occurred in many parts of England, and the sudden break in the weather on the 20th was marked by heavy rain, exceeding an inch in various parts of Ireland and western England, 2·1 ins. at Kingstown, and 2·2 ins. at Bray. A disturbance which had been indicated between Iceland and Greenland on the 19th worked round the north of Iceland to the Faröe by the morning of the 21st, afterwards crossing Scandinavia to Russia. It did not bring a great deal of wind, but there were a few thunderstorms over eastern England on the 22nd. and falls of more than an inch of rain locally in England and Ireland, 1·5 in. at Doneraile, Cork. On the 23rd a new depression appeared beyond Ireland, and moving slowly on about an east-north-easterly path it crossed Scotland, and on nearing the south coast of Norway on the evening of the 26th it dispersed. Its advance was marked by a decided increase in the force of the South-Westerly wind, the strength of a gale being attained at Holyhead, Clacton-on-Sea and in London. There were several heavy falls of rain on the 24th and 26th, up to 1·7 in. at Towyn, and 1·8 in. at Poltalloch on the latter date. With the collapse of this system another was found approaching Scotland from the westward, and it proved to be the deepest of the month. At 7 a.m. on the 27th the pressure minimum, 28·76 ins., was over Shetland, the disturbance remaining between the Faröe and the Norwegian coast until the close of the month. On the 27th, 28th and 29th strong to high South-Westerly winds were experienced extensively, a gale in various sections of our coasts, a strong gale at Malin Head and Portland Bill. Thunderstorms occurred daily from the 27th to the 30th in numerous localities, with hail in many places, but only on the 27th were there a few rainfalls of more than an inch, 1·7 in. at Southampton.

Another great cyclonic disturbance struck the Irish coast on the 31st, moving on a due easterly course, the barometer falling below 29 ins. in northern Ireland. A gale from between South-East and South-West was felt over the southern and western districts, a strong gale at Pembroke, Scilly and Yarmouth, and a whole gale at Portland Bill. There were some local

thunderstorms, and several heavy rainfalls, ranging up to 1·8 in. at Dursley, Gloucestershire, and 2·3 ins. at Abersychan, Mon.

This disturbed spell had cool days throughout, afternoon maxima below 60° not being uncommon, but generally the nights were fairly mild, with hardly any minima as low as 40°.

Fog was reported at many points on the western coasts on the first four days of the month, but with this exception there was a marked decrease in the frequency along our shores, the south coast of England being almost entirely free.

The temperature of the surface water of the sea on our coasts showed, compared with July, a slight increase in most localities, but up the west of Ireland and Scotland it was already beginning to cool. Towards the close of the summer the temperature of the sea usually comes into fairly close agreement with that of the air on shore; round the north-east coasts of England the water last month was a trifle cooler, but in nearly all other localities it was slightly warmer than the air at neighbouring coast stations.

Rainfall was deficient in most parts of Ireland and North Britain, some places in the east of Scotland and the north-east of England receiving less than half the normal amount. At a few stations on our extreme north-west coasts—*i.e.*, in the west of Scotland and the north-west of Ireland—there was, however, a slight excess, while in the south and east of England there was a more general and decided excess. Amounts exceeding 5 ins. were recorded at several western stations, and as much as 6·3 ins. at Cardiff, 6·5 ins. at Poltalloch and 6·7 ins. at Fort William. In the north-east of Great Britain the total fall was in many cases less than an inch and a half, and at Leith and North Shields it was less than an inch and a quarter. The number of days with rain varied considerably in different localities. Many places in the west and north reported from 17 to 20 such occasions, Malin Head as many as 22, and Wick as many as 26; at Crieff there were, on the other hand, only 10, and at Balmoral only 9. In the south of England a number of stations had only 12 or 13 days with a measureable quantity, Portland Bill only 10, and Weymouth only 9.

Bright Sunshine.—The total duration of bright sunshine was, as a rule, in excess of the average, but at a few northern stations a trifling deficiency was reported. On some parts of our south and south-west coasts the excess was large, Ventnor recording an aggregate duration of 253 hours, as against an average of 207, and Woolacombe a total of 242 hours as against an average of 184. In the south of England most places registered more than half the possible amount, the highest percentage values being 59 at Southsea and Weymouth, and 58 at Bournemouth and Guernsey. At Deerness only 23 per cent. of the possible amount was recorded, and at Balta Sound only 19 per cent.

SEPTEMBER, 1908.

Pressure, Winds and Weather.—The mean distribution of atmospheric pressure for the month of September was in very fair agreement with the normal. The central space of an extensive region of low values was indicated over the more northern part of the Atlantic to the south-westward of Iceland, where the barometer readings averaged less than 29·6, while an area of relatively high values, 30 ins., and upwards, occupied the greater part of Europe from the Bay of Biscay, eastward. The British Isles were thus situated in the middle region between the extremes of pressure, with the barometric results differing but little from the usual level. At Jersey there was a small excess, and over the rest of the kingdom a deficiency, in many cases of less than 0·05 in., and nowhere amounting to 0·1 in. There were no great barometric changes, the range during the month being small, from ¾-in. in the Channel Islands and the Hebrides, to 1¼ ins. on the Irish Sea. In the main, therefore, the pressure distribution was of a Southerly to Westerly type, winds from this quadrant largely prevailing, occasionally veering into the north-west quarter, but rarely visiting the eastern half of the compass. Although the conditions were, generally speaking, of a very unsettled character, and the weather presented great variations, gales were few in number. But while wind storms were uncommon, rain storms of considerable intensity were rather frequent, and the thermometric records disclose some remarkable fluctuations of temperature—from unseasonable cold in the first half of the month to equally unseasonable warmth at the close.

A moderately deep depression, with minimum pressures of about 29 ins., which reached Ireland on August 31st was centred over Wales and the west and north of England on the morning of September 1st, then passed quickly eastward, reaching the Baltic region on the following day. On the 1st the South-Westerly to Westerly wind blew a gale in many localities, a strong gale at Jersey, Dover and Dungeness, and a whole gale at Portland Bill. The anemometrical records show that at Scilly a mean hourly velocity of 56 miles was reached, the velocity exceeding 50 miles an hour through eight consecutive hours, while in one of the squalls a velocity at the rate of 69 miles an hour was registered. Brighton had a gust at the rate of 61 miles, and Plymouth and Shoeburyness 57 miles per hour. In the rear of the disturbance the northerly wind was not so severe, Holyhead and Malin Head reporting gale force, and at Alnwick Castle a gust at the rate of 55 miles an hour was recorded. Thunderstorms occurred in many parts of England. The greater portion of the rainfall associated with the storm fell during the rain-day, August 31st. It exceeded 1 in. in many places, mostly in South Wales and the Midlands.

A small and shallow disturbance which moved eastward across the extreme southern districts on the 3rd and 4th was accompanied by very little wind, but it deposited from ½-in. to an inch of rain at a number of places. Under the influence of a depression over Iceland on the 5th, a south-westerly gale was felt at Malin Head, and very heavy rain fell over our northern districts, up to 1·9 ins. at Glencarron, and 2 ins. at Laudale.

Extremely unsettled weather marked the progress of a slow-moving depression which made its appearance off the west of Ireland on the morning of the 7th. Taking a north-easterly

course it occupied three days in passing to the south-west coast of Norway, the lowest pressure being 29·15 ins. at Aberdeen on the 9th. Strong or high South-Westerly to North-westerly winds blew in most districts, and each day from the 7th to the 10th the force of a gale was attained locally, on the 9th a strong South-Westerly gale at Nottingham and Pembroke, Westerly at Portland Bill, and North-Easterly at Wick. A squall at the rate of 53 miles per hour was registered at Shoeburyness. Very few thunder storms were reported between the 7th and the 10th, but in the extreme northern and north-western parts of the United Kingdom rain was heavy and persistent. In numerous instances the falls were an inch or more in a day—on the 7th 1·8 ins. at Killibegs and 1·9 ins. at Rothesay; on the 8th, 1·6 ins. at Kinlochewe (Ross), 1·7 ins. at Blacksod Point, 1·8 ins. at Foynes, Mount Callan (Clare) and Glencarron, 1·9 ins. at Stornoway and Wick, 2 ins., at Markree Castle, and 3·6 ins. at Ardross Castle (Ross); and on the 9th 1·6 in. at Killibegs, and 2·2 ins. at Sandside, Orkney. From the 5th to the 9th, Kinlochewe received 5·3 ins., from the 7th to the 9th, Killibegs had 4·7 ins, and on the 8th and 9th Ardross Castle exceeded 4·9 ins. At Ampleforth Abbey on the afternoon of the 9th there was an extremely heavy shower (0·3 in.) of sleet, rain and snow: at Liverpool Observatory on the following morning snowflakes fell with rain; and on the 11th, heavy rain, hail and snow fell at Berkhamsted for 25 minutes. As the disturbance was passing away a very small secondary irregularity of pressure moved across southern England, occasioning minor thunderstorms, and small quantities of rain and hail in many neighbourhoods. Canterbury, however, was visited by a fierce thunderstorm between 5 p.m. and 6 p.m., accompanied by a deluge of rain and hail. In hollows the hail accumulated to a depth of 15 inches, and stopped pipes and drains. Streets and houses were flooded. In the east of the City the rainfall was only 0·45 in., but in the north it was 1·45 ins., in the centre 1·99 ins. (of which 1½ ins. fell in about 20 minutes), and in the south 3·15 ins.

After this the conditions became much less disturbed, although they remained of an unsettled type until practically the end of the month. The Atlantic low pressure system maintained its position well to the westward of our coasts and near Iceland, and only some small secondaries visited these islands. As a rule these did not cause much wind, but a southerly gale was felt at Roche's Point on the 25th, and at Blacksod Point on the 29th. Occasionally there were local thunderstorms, and here and there rain fell rather heavily, 2·1 ins. at Graythwaite, Lake Windermere, on the 16th, and 1·7 ins. at Kilkenny on the 19th. Even in the closing days, when the weather had become very fine and warm over England, there were several falls of from 1 in. to 1·5 in. of rain in Ireland and Scotland.

The more disturbed half of the month was marked by cold weather over the country generally. Maximum afternoon temperatures below 60° were commonly experienced, in very numerous instances they were below 55°. Between the 3rd and 5th, Stokesay, Markree Castle, Strathpeffer and Sumburgh Head reported 51°, and Llangammarch Wells under 50°. Similarly low maxima occurred between the 9th and 13th, Rhyl, Nairn, and Wick having 50°, and Buxton only 49°. At Whitworth Park, Manchester, the maximum of 52½° on the 10th occurred in the night. During the same period some of the nights were exceedingly cold, shade minima below 35° being registered at many stations. On the 5th, Wokingham touched 31°, Llangammarch Wells, 29°, and Balmoral, 27°; and on the 12th or 13th, Lincoln, Buxton, Carlisle and Kilmarnock registered 31°, Garforth and Colmonell, 30°; Wokingham. 29°, and Llangammarch Wells, 28°. During a temporary burst of warmth on the 19th and 20th, the thermometer passed 70° in many localities, mounting to 79° at Canterbury and Whitby. Quite at the close the weather suddenly became abnormally warm, so that on the last two days readings above 75° were numerous, a dozen stations rose to 80°, and on the 30th Leeds and Whitby had 81°, and Epsom and Maidenhead, 82°.

An auroral display was witnessed at Liverpool, Heddon-on-the-Wall, and other places, on the evening of the 29th.

Fog was reported on various parts of our coasts on the 7th and 8th, otherwise atmosphere during the first half of the month was generally clear. From the 17th to the end, however, it was present every day in many localities. Inland, also, there was an appreciable increase in the frequency of fog, especially during the morning hours.

All round our shores the temperature of the sea water was decreasing. Off the West of Ireland, the South-East of England, and on the eastern side of the Irish Sea the mean values showed a reduction of from 3° to 5° since August, while on the east coasts of Ireland and Britain the reduction was 1° or 2°. In most neighbourhoods the water was a little warmer than the air, but on the eastern part of the English Channel it was 3° or 4° warmer.

Rainfall.—Notwithstanding the many heavy rainstorms, the aggregate totals for the month show that there was an excess of precipitation only in Scotland, Ireland, north-west of England and the English Channel. Some stations in those regions had an excess of more than 3 ins., while several parts of England returned a deficiency of more than an inch, 1½ ins. at Folkestone, Portsmouth and Woolacombe. The largest totals were 11·8 ins. at Killybegs, 11·1 ins. at Glencarron, and 10·4 ins. at Carragh Lake (Kerry); the smallest, an inch at Shoeburyness, Southend and Folkestone, and 0·7 in. at Clacton-on-Sea. Rain was measured on 28 days at Stornoway, Gruline (Mull) and Cahir, and 27 days at Balta Sound and Killarney, against 9 at Shoeburyness, 8 at Felixstowe and in the Forest of Dean (200 feet), and 7 at Southend.

Bright Sunshine.—The duration of bright sunshine was below the average in nearly all districts, the difference amounting to 61 hours at Strathpeffer, 51 hours at Pembroke, and 48 hours at Armagh and Birr Castle. There was a small excess at many southern stations. Ramsgate, Broadstairs, Dover, Eastbourne and Jersey with from 185 to 181 hours for the whole month, had 49 per cent. of the possible duration, while Crathes, with 54 hours, had only 14 per cent., West Linton, Balmoral and Strathpeffer returning 15 per cent.

Maximum Temperatures in the Sun and Minimum Temperatures on the Grass.

Districts.	Maximum Temperature in Sun. Highest Reading experienced.			Minimum Temperature on Grass. Lowest Reading experienced.			No. of days of Temperature at 30° or below.

TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

Prepared in the Meteorological Office under the direction of W. N. Shaw, LL.D., Sc.D., F.R.S.

In compiling the following Tables (pp. 80 to 89) the stations have been grouped into eight Districts, namely, 1. London ; 2. England, Central ; 3. England, South-East ; 4. England, East ; 5. England, North-East ; 6. England, North-West with North Wales ; 7. England, South-West with South Wales ; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 13.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

The stations selected, with the names of the Observers, are shown below.

LIST OF STATIONS AND OBSERVERS.

Station.	Observer.	Station.	Observer.
1. LONDON:—		4. ENGLAND, E.:—	
Tottenham ..	J. F. Butler-Hogan, M.D., LL.B., for Urban District Council.	Cromer ..	W. H. Archer, for Urban District Council.
Camden Square	H. Robert Mill, LL.D., D.Sc.	Hillington ..	Rev. H. E. B. Ffolkes, M.A.
Westminster ..	The Meteorological Office.	Norwich .. (Eaton.)	A. W. Preston.
Greenwich ..	The Royal Observatory.	Cambridge ..	R. Irwin Lynch, M.A. The Botanic Gardens.
Norwood ..	W. Marriott.	Bennington ..	Rev. J. D. Parker, LL.D.
Kew	The Kew Observatory (National Physical Observatory).	Clacton-on-Sea	A. W. Shadick, for Urban District Council.
2. ENGLAND, CENTRAL:—		Berkhamsted ..	E. Mawley
Huddersfield	J. Firth.	5. ENGLAND, N.E.:—	
Wakefield ..	A. French, M.R.C.S., L.R.C.P.	Cockle Park .. (*near Morpeth*).	T. B. Hewetson, for the Northumberland County Council.
Belvoir Castle	W. H. Divers, for the Duke of Rutland, K.G.	North Shields	The Meteorological Office.
Coventry ..	E. Hugh Snell, M.D., M.O.H., for the Corporation.	Durham ..	Prof. R. A. Sampson, M.A., F.R.S.
Nottingham ..	Arthur Brown, M.Inst.C.E., and Philip Boobbyer, M.D., M.O.H., for the Corporation.	York	Oxley Grabham, M.A., for Yorkshire Phil. Soc.
Birmingham ..	A. Cresswell, for the Midland Institute Observatory.	Hull	H. B. Witty, for the Corporation.
Oxford	The Radcliffe Observatory.	Spurn Head ..	The Meteorological Office.
Bath	W. H. Symons, M.D., M.O.H., for the Corporation.	Lincoln ..	S. R. Moss, for the Corporation.
Shrewsbury ..	Capt. W. E. Manser, R.E.		
Buxton	W. Pilkington.		
Sheffield ..	E. Howarth. The Weston Park Museum.	6. ENGLAND, N.W., WITH NORTH WALES:—	
Stokesay ..	Rev. W. La Touche, B.A.		
Cheltenham ..	A. C. Saxby, for the Corporation.	Southport ..	J. Baxendell, for the Corporation.
		Manchester ..	J. Niven, M.A., M.B., M.O.H., for the Corporation.
3. ENGLAND, S.E.:—			
Salisbury ..	Thos. Challis, for the Earl of Pembroke.	Aspatria ..	J. Smith Hill, B.A., B.Sc. The Agricultural College.
Brighton ..	D. Forbes, M.D., M.O.H., for the Corporation.	Stonyhurst ..	Rev. W. Sidgreaves, S.J. The Observatory.
Eastbourne ..	S. R. Henderson, for the Corporation.	Llandudno ..	W. Little, for the Town Council.
Portsmouth ..	A. Mearns Fraser, M.D., M.O.H., for the Corporation.	Liverpool .. (Bidston.)	W. E. Plummer, M.A. Bidston Observatory.
Southampton .	A. Vaughan, for Director General of Ordnance Survey.	Bettws-y-coed	Dr. H. W. Fox, for District Council.
Ventnor ..	Miss Gibson, for Royal National Hospital for Consumption.

* The Summary for "London" is for three calendar months. The "difference from average" is computed from the data for Camden Square, Norwood, and Kew, the average used being that for the 35 years 1871-1905. A comparison with the averages for 65 years 1841-1905 for the Royal Observatory, Greenwich, is given in the following tables.

For corresponding values for the years since 1878, *see* Appendix I. to the Weekly Weather Report of the Meteorological Office, 1908.

July, 1908. Station.	Height of Barometer Cistern above M.S.L.	Barometer. Mean Pressure, at 32° F. at Station Level.	Air Temperature. Mean of A (Minimum)	Mean of B (Maximum)	Mean of A and B. NOTES ON THE STATISTICAL TABLES.

Hours of Observation.—Observations are made at 7 a.m. and 6 p.m. G.M.T. at telegraphic reporting stations (8 a.m. and 8 p.m. at Oxford), and at 9 a.m. and 9 p.m., mean local time, at normal climatological stations. The names of normal climatological stations are printed in heavy type. Observations are taken at 9 a.m. only at *Brighton*, *Coventry*, *Llangammarch Wells* and *Portsmouth*, and at 9 a.m. and 6 p.m. at *Ventnor*. At the telegraphic reporting stations, the names of which are printed in ordinary type, the results given under hygrometer and cloud are based on the morning observations only.

Barometer.—The correction for latitude has not been applied. The values are for station level. They are the means of readings at 7 a.m. and 6 p.m., or at 9 a.m. and 9 p.m. respectively, except in the cases of Brighton, Coventry, Llangammarch Wells, Portsmouth and Ventnor, where they are the means of the observations at 9 a.m.

Rainfall.—The amounts are for the 24 hours commencing at the time of morning observation.

Weather Phenomena.—The number of days of **Rain**, **Snow**, **Hail**, **Thunderstorm**, **Fog** and **Gale** are counted irrespective of the hours at which the phenomena occur. Except in the case of rainfall (see above) the day is the civil day. A day is reckoned as a day of "**clear sky**," if the mean of the estimates of the "amount of cloud" at the two hours of observation is **less** than 2, and as an "**overcast**" day if the mean is **greater** than 8.

Wind Summaries.—The results given under wind direction, and the number of observations of calms and of fresh or strong wind, are based on the observations at fixed hours taken twice a day. At Brighton, Coventry, Llangammarch Wells, Portsmouth, and Camden Square, where observations of wind (and cloud) are taken only once a day, the observer's results have been multiplied by 2, in order to render them more nearly comparable

Mean of Observations of amount at 9 a.m. and 9 p.m., or at 7 a.m. and 6 p.m.	Cloud (0–10).	Rain and other forms of Precipitation.				Weather, Number of days of								Wind. No. of observations at 9 a.m. and 9 p.m., or at 7 a.m. and 6 p.m.

with those for other stations. At Ventnor the results are based on observations at 9 a.m. and 6 p.m. (January 3 p.m.). At Falmouth, Kew and Stonyhurst the wind observations are based on the records of a standard Robinson anemometer (factor 2·2). (At Plymouth and Southport the equivalent values are obtained from a Dines Pressure Tube Anemometer.) Velocities of between 13 and 38 miles in the hour have been entered as "fresh or strong winds," velocities of 39 miles in the hour, or above, as gales. *See* a Report by the Director of the Meteorological Office entitled "The Beaufort Scale of Wind Force ... ." Official No. 180.

Averages.—The averages used are—Temperature and Rainfall for the 35 years 1871–1905; Bright Sunshine for the 25 years 1881–1905. The values are published in Appendix III. to the Weekly Weather Report of the Meteorological Office for 1906.

Royal Observatory, Greenwich.—The averages for Temperature and Rainfall, with which the current values are compared, are for the 65 years 1841–1905. The averages for sunshine are for the period 1897–1906. The earth temperatures are taken at a depth of 3 ft. 2 ins. The daily rainfall amounts are those for the 24 hours comprising the civil day. The numbers of days in each month of the quarter which were persistently overcast from midnight to midnight were 1, 0, 0, the number of persistently cloudless days were 0, 0, 0, the number of persistently foggy days were 0, 0, 0.

Mean Values for Districts.—The monthly mean values for districts for temperature, rainfall and sunshine are computed from the data for those stations which are included in the Weekly Weather Report of the Meteorological Office. The selection of stations is not identical with that included in this Report. The district values, as quoted, are comparable with the statistics published in previous issues of the Weekly Weather Report of which a Summary is in course of preparation. The averages with which the current district values are compared are for the 25 years 1881–1905. The district values for amount of cloud and earth temperatures are taken from the Monthly Weather Report of the Meteorological Office.

INDEX OF REGISTRATION DISTRICTS.

The following Index furnishes a reference to the *Number** of each REGISTRATION DISTRICT. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.

Aberayron, 604.
Abergavenny, 582.
Aberystwith, 605.
Abingdon, 115.

INDEX OF URBAN DISTRICTS

As existing on 30th September, 1908, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked * have been created, and the boundaries of those marked † have been altered since the Census of 1901. The exact constitution of each Urban District and of each Registration Sub-district at the time of the last Census is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,169 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 154 were each co-extensive, at the end of September, 1908, with one or more Registration Areas.

QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, DISTRICTS, AND SUB-DISTRICTS OF

ENGLAND AND WALES;

WITH TABLES SHOWING BIRTHS, DEATHS, AND NOTIFIED CASES OF INFECTIOUS DISEASE IN CERTAIN LARGE TOWNS.

Published by Authority of the Registrar-General.

Printed under the Superintendence of His Majesty's Stationery Office,
AND SOLD BY WYMAN AND SONS, LTD., FETTER LANE, E.C.

No. 240.] **Marriages**—*July, August, September*, 1908.
Births and **Deaths**—*October, November, December*, 1908. [Price 9*d.*

General Register Office, Somerset House,
27th January, 1909.

UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1908 is estimated at 44,539,593 persons; that of England and Wales at 35,348,780, that of Scotland at 4,826,587, and that of Ireland at 4,364,226.

In the United Kingdom 276,109 *births* and 165,788 *deaths* were registered in the three months ended 31st December 1908. The natural increase of population was, therefore, 110,321. The number of *persons married* in the quarter ended 30th September 1908 was 174,620.

The birth-rate in the United Kingdom in the *fourth* quarter of 1908 was 24·4, and the death-rate 14·7, per 1000 of the estimated population. The marriage-rate in the *third* quarter of 1908 was 15·6 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

Passenger Movement.

According to a Return issued by the Board of Trade it appears that in the three months ended 31st December 1908, the total passenger movement to and from places out of Europe showed a net balance outward of 18,961 passengers, compared with a net balance outward of 48,737 passengers in the corresponding period of the previous year.

The net outward balance among persons of British origin amounted to 20,073 persons. Of these 15,101 were English, 152 Welsh, 3,223 Scottish, and 3,015 Irish passengers, whilst there was an inward balance of 1,418 British Colonial passengers. Compared with the numbers in the corresponding period of the previous year the net outward balance of English, Welsh, and British Colonial passengers showed a decrease of 49 per cent., that of Scottish a decrease of 8 per cent., and that of Irish a decrease of 62 per cent.

3000 Wt 36 12/08 D & S 3 34558

Among persons of foreign origin there was a net balance inward of 1,112 against a net balance outward of 11,032 in the corresponding period of the previous year.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,026 registration sub-districts of England and Wales in the three months ended 31st December 1908; and the MARRIAGES in 15,701 churches or chapels, in 15,216 registered places of worship unconnected with the Established Church, and in 633 Superintendent Registrars' Offices, in the three months ended 30th September 1908.

Marriages.

In the *third* quarter of 1908 the marriages of 147,524 persons were registered, being equal to an annual rate of 16·6 persons married per 1000 of the estimated population, against an average rate of 17·3 per 1000 in the third quarters of the ten years 1898–1907.

Among registration counties with populations exceeding 100,000, the lowest marriage-rates were 10·9 in Carnarvonshire, 12·5 in Suffolk, 12·6 in Denbighshire, 12·9 in Shropshire, 13·3 in Kent and in Norfolk, and 13·5 in Dorsetshire; the highest rates were 17·7 in Oxfordshire, 17·9 in Warwickshire, 18·1 in Bedfordshire, 18·2 in Monmouthshire, 18·5 in Lancashire and in Glamorganshire, and 19·0 in London.

Births.

The births registered in the *fourth* quarter of 1908 numbered 221,438, and were in the proportion of 24·6 annually per 1000 of the population; this is 2·4 per 1000 below the mean birth-rate in the ten preceding fourth quarters, and is the lowest birth-rate recorded in any fourth quarter since civil registration was established. In registration counties with populations exceeding 100,000, the lowest birth-rates during the quarter were 18·4 in Sussex, 19·3 in Herefordshire, 19·4 in Carnarvonshire, 20·1 in Northamptonshire, 20·2 in Somersetshire, and 20·5 in Gloucestershire; the highest rates were 28·6 in Nottinghamshire, 28·7 in Northumberland, 29·0 in the North Riding of Yorkshire, 29·9 in Carmarthenshire, 32·0 in Durham, 33·2 in Glamorganshire, and 34·7 in Monmouthshire.

In 76 great towns the birth-rate averaged 25·0 per 1000, ranging from 13·4 in Hastings, 14·9 in Hornsey, 16·5 in Bournemouth, 17·6 in Halifax, 19·0 in Bradford, and 19·1 in Reading, to 31·9 in Swansea, 32·0 in Tynemouth, 32·3 in St. Helens, 32·5 in Middlesbrough, 33·4 in Merthyr Tydfil, and 39·3 in Rhondda. In 142 smaller towns the mean birth-rate was 24·0 per 1000, and in the remainder of England and Wales, excluding the 218 chief towns, it was 24·4.

Natural Increase of Population.

The natural increase of population in England and Wales last quarter by excess of births over deaths was 91,156, against 91,633, 89,760, and 89,641 in the fourth quarters of 1905, 1906, and 1907 respectively.

Prices and Pauperism.

The average price of wheat per quarter, which had been 33*s.* 2*d.*, 32*s.* 1*d.* and 31*s.* 2*d.*, respectively in the preceding three quarters, was 31*s.* 8*d.* last quarter. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, 4*d.*; of prime beef, 7⅜*d.*; of inferior mutton, 5⅜*d.*; of prime mutton, 8⅜*d.* Compared with the average prices in the preceding three months, the mean prices of inferior and of prime beef remained unchanged. The mean price of inferior mutton showed an increase of ⅛*d.* while that of prime mutton showed a decrease of ⅛*d.* The average price in the London Market of sea-borne coal put in barge from the collier in the Thames

was 17*s.* 3*d.* per ton, against 20*s.* 3*d.* per ton in the fourth quarter of 1907. The mean price of Consols was 84*l.* 6*s.* 6*d.*, having been 86*l.* 11*s.* 3*d.* in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England was 2*l.* 10*s.*, having continued at this figure since 28th May, 1908.

The average number of paupers relieved in England and Wales on the last day of each week in the quarter was 815,074, exclusive of lunatics in county and borough asylums, registered hospitals and licensed houses, of casual paupers, of persons receiving out-door medical relief only, and of patients in the fever and small-pox hospitals of the Metropolitan Asylum District. Of these 815,074 persons, 273,455 received in-door, and 541,619 out-door, relief. The proportion of the population in receipt of poor-law relief was 23·1 per 1000, against 22·6 and 22·3 per 1000 respectively in the fourth quarters of 1906 and 1907.

Meteorology.

A detailed report, prepared in the Meteorological Office, on the weather over the United Kingdom with a table of Monthly Results for a number of stations in England and Wales, will be found on pp. 71–89.

The weather of the past quarter was mostly fair, mild, and dry, and gales were rare, and seldom of any great severity. In the closing quarter of the year the highest temperatures are commonly experienced near the beginning, and the lowest near the end of the season. During the period under review the usual chronological order was not only well maintained, but exceptionally well marked. At the commencement of October the thermometer in many parts of the Kingdom reached a higher point than any previously recorded at so late a time in the season : while at the close of December the temperatures over a large portion of England were the lowest experienced since the great frost of February, 1895.

October opened with a continuation of the remarkable spell of warmth noted at the end of September, the readings of the thermometer on the first three days being unusually high, both in the day time and at night. On the 4th the air became somewhat cooler, but the thermometer remained above the average until after the middle of the month, the weather being generally fair, with, however, a good deal of fog and mist in places. Heavy rain fell in many parts of Great Britain between the 18th and 21st, and after this a short spell of easterly winds was experienced, with a temperature below the average, showers of hail, sleet, or snow, being observed on the 24th in several parts of the country. Towards the end of the month, the thermometer again rose to an abnormally high level ; in many places the readings observed on the 29th were in fact almost as remarkable for the time of year as those registered on the first three days.

November witnessed a continuation of mild and generally fair weather, broken, however, in the second week by a frost of considerable severity. Between the 8th and 11th the sheltered thermometer sank below 20° in many parts of Great Britain, and reached a minimum of 10° at Wokingham. In the latter half of the month the conditions became rather changeable, but temperature was above the average, and in all but the extreme western and northern parts of the Kingdom the rainfall was usually slight, the only important exception occurring on the 21st, when considerable amounts were recorded in the north and west of England. The heavy rains on this occasion were associated with a deep barometrical depression which skirted our northern coasts, and occasioned strong gales from west and north-west on the 22nd over nearly the whole Kingdom.

December was also for the most part mild and fairly dry, but with an excess of rain in a few places, chiefly in the south-west of England and the east of Scotland. Thick fogs occurred in the north and east of England in the opening week, but after this a brisk south-westerly wind sprang up, and on

the 10th and 11th a strong gale from that quarter, veering later to west and north-west, was experienced very generally. No frosts worthy of note were recorded until after Christmas Day, when an exceedingly cold air spread in from the continent, and seriously affected the weather in all but the extreme south-western parts of the Kingdom. Between the 26th and 30th the thermometer over the whole of Eastern, Central, and South-eastern England fell steadily to an exceptionally low level, and on the last day of the period readings ranging between 10° and zero were registered very commonly. Heavy snowstorms occurred about this time over a large part of the Kingdom, and were accompanied on the 29th by gales from the eastward and south-eastward. Late on the 30th a mild south-westerly breeze began to extend over the country, and by the close of the month a rapid and general thaw was in progress.

For the quarter as a whole the *mean temperature* was considerably above the average, the excess ranging in most districts between 2·5° and 3·0°. The highest readings were observed between October 1st and 4th, when the thermometer in the shade rose to 75° and upwards over nearly the whole of Great Britain, as well as in some parts of Southern Ireland. At several English and Welsh stations a reading of 80° or a little above it was recorded, and at Whitby on the 1st the thermometer touched 84°. In another spell of warmth which occurred at the close of October the thermometer in many parts of the country rose to within a degree or two of 70°. The lowest temperatures of the quarter were observed as a rule on December 30th, but at some eastern stations on the following day. Over by far the larger portion of Central and Southern England the sheltered thermometer fell below 10°, and in some few places below 5°. At Maidenhead a reading as low as zero was recorded, while at Liphook the minimum was a degree below zero. In many instances the terrestrial radiation instruments were covered with snow and thus rendered ineffective, but at Raunds the thermometer on the ground fell to 7° below zero, and at Epsom to 8° below it. The frost at this time failed to touch the west coast of Cornwall; at Penzance the thermometer in the screen did not fall below 36°.

The *rainfall* of the quarter was deficient in all districts, and especially in the north-east of England, where the total amounted to only 53 per cent. of the average. In several other districts little more than two-thirds of the normal quantity was collected, and in London and Central England less than two-thirds. The number of rain days was also small; in England North-East they were 7 below the average, and in London and the English Channel district 8 below it. The largest falls in 24 hours occurred respectively on the following dates:—October 18th to 21st in various parts of the Kingdom (at Weymouth during a severe thunderstorm on the morning of the 21st, 4 inches fell in the space of about five hours); November 21st and 22nd in the western and northern parts of Great Britain, the largest amounts registered being on the 21st, 1·8 in. at Killybegs and 1·7 in. at Darwen; December 5th and 7th in the west of Scotland; December 15th in South Wales (2·1 ins. at Pembroke); and on December 28th to 30th in the west and south-west (at Falmouth on the 29th an inch fell in the space of 3 hours 20 minutes). The snowstorms at the close of December were attended by high winds, so that much drifting took place; on the level a depth of 9 ins. was reached at Abersychan (Monmouth) and 11¼ ins. at Llandrindod Wells.

The *duration of bright sunshine* was in excess of the average over the country generally. In England South-East the excess amounted to 60 hours, in the English Channel to 80 hours, and in England North-West to 90 hours, the mean daily allowance in the last-mentioned district being about one hour in excess of the average. In the week ending with November 14th more than half the possible amount was registered in England East and South-East, the week being the finest observed in those districts at so late a period in the year since the general establishment of sunshine recorders in 1881.

Deaths.

The deaths registered in England and Wales last quarter numbered 130,282, and were in the proportion of 14·5 annually per 1000 persons living; this rate is 1·7 per 1000 below the mean rate in the ten preceding fourth quarters, and is the lowest death-rate recorded in any fourth quarter since civil registration was established. In registration counties with populations exceeding 100,000, the death-rates ranged from 11·0 in Northamptonshire, 11·4 in Berkshire, 11·6 in Essex and in Wiltshire, 11·9 in Sussex and in Dorsetshire, 12·0 in Buckinghamshire and in Somersetshire, and 12·1 in Surrey and in Kent, to 16·6 in Carmarthenshire, 16·8 in Lancashire, 17·3 in Monmouthshire, 17·5 in the North Riding of Yorkshire, 17·6 in Durham, and 17·9 in Northumberland.

The 130,282 registered deaths included 67,140 of males and 63,142 of females, the death-rate among males being 15·5, and that among females 13·6, per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding fourth quarters, the death-rate of males showed a decrease of 1·7, and that of females a decrease of the same amount. Out of equal numbers living, the deaths of males were to those of females as 114 is to 100; the mean proportion in the fourth quarters of the ten preceding years having been 112 to 100.

Urban and Rural Mortality.

In 76 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1908 is estimated at about sixteen and a quarter millions, the death-rate calculated without reference to sex and age constitution of the populations was 14·8 per 1000 living; the rates in the three preceding fourth quarters having been 15·8, 16·2 and 15·4. The crude rates in the several towns ranged from 7·6 in Hornsey, 8·9 in Kings Norton, 9·1 in East Ham, 9·5 in Leyton, 9·8 in Handsworth (Staffs.), and 9·9 in Hastings, to 19·0 in Stockport, 19·1 in Rotherham, 19·2 in Rochdale, 19·5 in Preston, 19·8 in Oldham, 20·4 in Tynemouth, and 21·9 in Middlesbrough.

In 142 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at nearly five millions, the crude death-rate was 14·0 per 1000 living; the rates in the three preceding fourth quarters had been 13·7, 14·7, and 14·2.

In the remainder of England and Wales, with an aggregate population estimated at more than fourteen millions, of whom nearly six and a half millions live in small towns and more than seven and a half millions in rural districts, the crude death-rate was 14·3 per 1000 living; the rates in the three preceding fourth quarters having been 14·2, 15·1, and 14·2.

The crude death-rate, that is the proportion of deaths from all causes to each thousand of the population, is a fairly trustworthy test of relative mortality when the rates for short periods in the same area are compared, but when one area is compared with another, crude death-rates should be supplemented by rates in which the sex and age constitution of the respective populations is taken into account. The following statement shows the crude and corrected death-rates in each of the above areas. (See also Table III. page xv.)

December Quarter, 1908.

	Crude Death-rates.	Corrected Death-rates.
England and Wales	14·5	14·5
76 Great Towns	14·8	15·7
142 Smaller Towns	14·0	14·7
England and Wales, less the 218 Towns	14·3	13·5

It should further be stated that owing to the difficulty of distributing to their proper areas the deaths occurring in public Institutions the death-rate in the rural area may possibly be somewhat over-stated.

Mortality at Different Ages.

Of the 130,282 deaths registered last quarter, 30,728 were those of infants under one year of age, 57,139 those of persons aged between one year and sixty years, and 42,415 those of persons aged sixty years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was equal to 139 per 1000, the average in the ten preceding fourth quarters having been 141. Among registration counties with populations exceeding 100,000, the lowest proportions were 48 in Herefordshire, 78 in Dorsetshire, 80 in Oxfordshire, 83 in Northamptonshire and in Wiltshire, 84 in Somersetshire, and 90 in Sussex. The highest proportions were 165 in the North Riding of Yorkshire, 166 in Nottinghamshire, 167 in the West Riding of Yorkshire, 171 in Lancashire, 182 in Northumberland, and 188 in Durham.

In the 76 great towns infantile mortality averaged 146 per 1000 births, being 7 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 48 in Hornsey, 66 in Hastings, 83 in Leyton and in Bournemouth, 86 in Kings Norton, and 93 in Northampton; the highest were 213 in Stockport, 214 in Burnley, 219 in Blackburn, 223 in Rotherham, 226 in Rochdale, and 236 in Preston. Among the 142 smaller towns infantile mortality averaged 147 per 1000 births, ranging from 48 in Hereford, 55 in Aldershot, 63 in Guildford, Rochester, Hove, and Cheltenham, and 65 in Penge, to 240 in Aberdare, 246 in Glossop, 248 in Longton, 259 in Farnworth, 269 in Workington, and 297 in Hyde. Excluding these 218 towns, infantile mortality in the remainder of England and Wales was in the proportion of 127 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 7·1 per 1000 of the estimated population at this group of ages, being 1·1 below the mean rate in the ten preceding fourth quarters. In the 76 great towns the mean mortality at this age-group was 7·6 per 1000, ranging from 3·8 in Hornsey, 3·9 in Handsworth (Staffs.), 4·7 in Leyton and in Kings Norton, 4·8 in Reading and in Norwich, 4·9 in Aston Manor, and 5·0 in Hastings, to 10·4 in Warrington, 10·5 in Huddersfield, 10·8 in Oldham, and 13·6 in Middlesbrough. In the 142 smaller towns the mortality at this age-group averaged 6·7 per 1000.

Among persons aged sixty years and upwards the mortality was at the annual rate of 63·7 per 1000 of the estimated population at this group of ages; the mean rate in the ten preceding fourth quarters having been 68·0. In the 76 great towns the mean mortality at this age-group was 67·4 per 1000; the lowest rates were 44·6 in Kings Norton, 46·2 in Hastings, 49·1 in East Ham, 50·2 in Great Yarmouth, and 51·6 in Leyton; the highest rates were 82·8 in Blackburn, 83·4 in Preston, 83·9 in Halifax, 88·7 in Newcastle on Tyne, 91·3 in Rochdale, and 93·4 in Bootle. In the 142 smaller towns the rate averaged 66·2 per 1000.

Compared with the mean rates in the ten preceding fourth quarters, the mortality of infants under one year of age showed a decrease of 1·4 per cent., that of persons between one year and sixty years of age a decrease of 13·4 per cent., and that of persons aged sixty years and upwards a decrease of 6·3 per cent.

Mortality from certain Epidemic Diseases.

The 130,282 deaths from all causes include—

4,689	that were	attributed to	diarrhœa,
2,172	„	„	measles,
1,696	„	„	diphtheria,
1,257	„	„	whooping-cough,
994	„	„	"fever,"
742	„	„	scarlet fever,
0	„	„	small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 11,550 deaths were referred last quarter, being in the proportion of 1·28 per 1000 of the estimated population, or 0·24 per 1000 below the average proportion in the corresponding quarters of the previous ten years.

The rate of mortality from diarrhœa exceeded the decennial average, while the rates from each of the other diseases were below the respective averages.

Diarrhœa was the assigned cause of 4,689 deaths last quarter, corresponding to an annual rate of 0·52 per 1000, which is higher by 0·08 per 1000 than the decennial average rate for the fourth quarter of the year. In Radnorshire no deaths from diarrhœa were registered last quarter, and only one death was returned in each of four other counties. Among counties with populations exceeding 100,000 persons, the highest death-rates were 0·76 per 1000 in Staffordshire, 0·77 in the West Riding and in the East Riding of Yorkshire, 0·83 in Nottinghamshire, 0·96 in the North Riding of Yorkshire, and 1·22 in Durham. In the 76 great towns the average death-rate from diarrhœa was 0·60 per 1000. Not one of the great towns was free from diarrhœa fatality during the quarter. Among these towns the highest death-rates were 1·28 per 1000 in Burnley and in Tynemouth, 1·53 in Blackburn, 1·73 in Middlesbrough, 1·87 in Rotherham, 1·92 in Grimsby, and 2·02 in Preston. In the 142 smaller towns diarrhœa was fatal on the average to 0·59 per 1000 of the population, and caused the highest mortality in Farnworth, Longton, Bilston, and Batley. In the remainder of England and Wales the death-rate from diarrhœa averaged 0·39 per 1000.

Measles was returned as the cause of 2,172 deaths last quarter, corresponding to an annual rate of 0·24 per 1000 of the population, or 0·07 per 1000 below the average in the fourth quarters of the preceding ten years. Of the 55 registration counties, sixteen were free from measles fatality, and the death-rate did not exceed 0·01 per 1000 either in Berkshire or in Cornwall. Among counties with populations of more than 100,000, the highest death-rates from this disease per 1000 of the respective populations were 0·33 in Lancashire, 0·35 in London, 0·36 in the East Riding of Yorkshire, 0·46 in the West Riding, 1·12 in the North Riding, and 1·34 in Leicestershire. In the 76 great towns measles caused an average mortality of 0·37 per 1000. In 24 of these towns no deaths from this disease were registered during the quarter. The highest death-rates were 1·21 in Tottenham, 1·30 in Rochdale, 2·24 in Huddersfield, 2·57 in Rotherham, 2·65 in Leicester, and 3·56 in Middlesbrough. In the 142 smaller towns, measles was fatal on the average to 0·16 annually per 1000 living, and among these towns showed exceptional fatality in Worcester, Middleton, Lancaster, Macclesfield, and Chadderton. In the remainder of England and Wales the average measles death-rate was 0·11 per 1000. Among registration sub-districts outside the 218 chief towns, measles was especially fatal in Bury St. Edmunds, Biddulph, Knottingley, Pontefract, and Rawmarsh.

Diphtheria (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 1,696 deaths, a number corresponding to an annual rate of 0·19 per 1000 living, which is below the average rate in the ten previous corresponding quarters by 0·06 per 1000. In four counties no deaths from this disease occurred last quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·26 per 1000 in Surrey and in Hertfordshire, 0·27 in Monmouthshire, 0·30 in the North Riding of Yorkshire, 0·31 in Dorsetshire, and 0·35 in Denbighshire. The average death-rate from diphtheria in the 76 great towns was equal to 0·18 per 1000 of their aggregate population. No death from this disease occurred in two of these towns. The highest death-rates were 0·35 in Croydon, 0·44 in Newport (Mon.), 0·46 in Devonport, 0·52 in East Ham, 0·54 in Salford, and 0·71 in Kings Norton. In the 142 smaller towns the mortality from this disease averaged 0·21 per 1000, the rate being highest in Reigate, Leigh

(Lancs.), Kingston on Thames, Mansfield, Enfield, and Tunstall. In the remainder of England and Wales, diphtheria was fatal in the average proportion of 0·19 per 1000 living. Among registration sub-districts outside the 218 chief towns, diphtheria was especially fatal in Waddesdon, Abthorpe, Gillingham (Dorset), Selby, and Hawarden.

Whooping-cough accounted last quarter for 1,257 deaths, and for a death-rate of 0·14 per 1000 annually, which is below the average rate in the ten previous corresponding quarters by 0·06 per 1000. In three of the counties no deaths from whooping-cough were registered last quarter. Among counties with populations exceeding 100,000, the lowest death-rates from this cause were 0·03 per 1,000 in Berkshire and in Carmarthenshire; the highest death-rates were 0·24 in Staffordshire, 0·27 in Cumberland, 0·29 in Durham, 0·32 in Monmouthshire, 0·36 in Northumberland, and 0·46 in Carnarvonshire. In the 76 great towns whooping-cough caused an average death-rate of 0·12 per 1000 living. No deaths from this disease occurred in eleven of these towns during the quarter, and the rate did not exceed 0·03 either in Brighton, Leicester, Birkenhead, or Gateshead; but it was equal to 0·36 in Wolverhampton, 0·40 in Tynemouth, 0·54 in Wigan, 0·59 in West Bromwich, 0·70 in Rotherham, and 0·77 in Stockton on Tees. In the 142 smaller towns the average death-rate from whooping-cough was 0·13 per 1000, the disease being especially fatal in Folkestone, Bilston, Darlington, Abertillery, and Aberdare. In the remainder of England and Wales whooping-cough caused an average mortality of 0·17 per 1000 annually. Among registration sub-districts outside the 218 chief towns, whooping-cough was exceptionally fatal in Balsham, Warsop, Arnold, Middlewich, Howden, Whickham, and Cockermouth.

"*Fever*" (including the three chief forms—*typhus*, *enteric fever*, and "*pyrexia*" of uncertain origin) was the registered cause of 994 deaths last quarter, equal to an annual death-rate of 0·11 per 1000 of the population, or 0·07 per 1000 less than the average in the fourth quarters of the previous ten years. In eleven counties no deaths from fever were returned last quarter; among counties with populations exceeding 100,000, the highest death-rates were 0·13 in Staffordshire, 0·14 in Northumberland, 0·15 in Monmouthshire, 0·17 in the West Riding of Yorkshire, 0·20 in Lancashire, and 0·26 in Durham. In the 76 great towns fever caused an average mortality of 0·11 per 1000 annually. In nine of these great towns no deaths from fever occurred; the towns with the highest fever death-rates were Grimsby, where the rate was 0·31 per 1000, Bolton 0·32, Devonport and Rotherham 0·41, Hanley 0·44, and Wigan 0·54. In the 142 smaller towns fever caused an average mortality of 0·11 per 1000 annually, the rate being highest in Tipton, Barnsley, Nuneaton, and Chesterfield. In the remainder of England and Wales the death-rate from fever averaged 0·11 per 1000. Among registration sub-districts outside the 218 chief towns fever was especially fatal in Deal, Atherton, Pontefract, Wath, and Houghton le Spring.

Scarlet fever accounted last quarter for the deaths of 742 persons, equal to a rate of 0·08 per 1000 living, or 0·05 per 1000 less than the decennial average rate for the fourth quarter. Eleven of the counties of England and Wales were free from scarlet fever mortality throughout the quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·12 per 1000 in Staffordshire, 0·13 in Essex, 0·14 in Shropshire, and 0·19 in Lancashire. In the 76 great towns scarlet fever accounted for an average mortality of 0·11 per 1000 annually. No deaths from this disease were recorded in nineteen of these towns. The highest scarlet fever death-rates were 0·33 in Handsworth (Staffs.), 0·35 in Aston Manor, 0·37 in West Bromwich, 0·47 in Warrington, 0·55 in Bootle, and 0·56 in St. Helens. In the 142 smaller towns scarlet fever was fatal in the average proportion of 0·07 per 1000 living, and caused the highest mortality in Hindley, Lancaster, and Shrewsbury. In the remainder of England and

Wales this disease caused an average death-rate of 0·05 per 1000 living. Among registration sub-districts outside the 218 chief towns scarlet fever was exceptionally fatal in Hitchin and in Crompton.

No deaths from *small-pox* were registered last quarter: the deaths in the four quarters immediately preceding numbered 0, 0, 9 and 3 respectively.

Violent Deaths.

The deaths in England and Wales referred to different forms of violence, either accidental or otherwise, numbered 4,824 last quarter, and corresponded to an annual rate of 0·54 per 1000 of the population, which is 0·05 below the average in the ten preceding fourth quarters. In registration counties with populations exceeding 100,000, the lowest death-rates from violence were 0·19 in Carnarvonshire, 0·26 in Buckinghamshire, 0·29 in Cambridgeshire and in Wiltshire, and 0·30 in Oxfordshire; the highest rates were 0·63 in the East Riding of Yorkshire, 0·64 in Northumberland, 0·65 in Carmarthenshire, 0·81 in Glamorganshire, and 0·87 in Monmouthshire. In the 76 great towns the mean rate was 0·54 per 1000 living; among the several towns the rate was only 0·04 in Aston Manor, 0·11 in Hastings, 0·16 in Bournemouth, 0·17 in York, and 0·18 in Leyton; but it rose to 0·84 in Rhondda, 0·85 in West Bromwich, 0·88 in Tynemouth, 0·95 in Swansea, and 1·04 in Burton on Trent.

Certification of Causes of Death.

Of the 130,282 deaths registered in England and Wales last quarter, the causes of 119,487, or 91·7 per cent., were certified by registered medical practitioners, and the causes of 9,056, or 7·0 per cent., by coroners after inquest; whilst the causes of the remaining 1,739, or 1·3 per cent., were not certified, the average percentage of uncertified deaths in the ten preceding fourth quarters having been 1·8. Among registration counties with populations exceeding 100,000, the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Middlesex, Wiltshire, Devonshire, Cornwall, Somersetshire, Gloucestershire, Leicestershire, Cheshire, and in the East and North Ridings of Yorkshire, as well as in Monmouthshire, and Glamorganshire, but it reached 3·0 in Durham, 3·2 in Berkshire, 3·4 in Shropshire, and 4·4 in Carnarvonshire. In the 76 great towns the mean proportion of uncertified deaths was 0·9 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, Tottenham, East Ham, Walthamstow, Brighton, Southampton, Ipswich, Great Yarmouth, Plymouth, Devonport, Derby, Stockport, Wigan, Leeds, York, West Hartlepool, Cardiff, or Swansea, the proportion per cent. rose to 3·8 in Warrington, 4·3 in Kings Norton, 4·8 in South Shields, 5·3 in Barrow in Furness, and 5·7 in Gateshead.

Inquests.

Inquests were held in England and Wales concerning 9,056, or 7·0 per cent., of the total deaths, the mean proportion in the ten preceding fourth quarters having been 6·8 per cent. In the 76 great towns the proportion of inquest cases averaged 7·9 per cent., ranging from 1·7 in Hastings, 2·9 in Warrington, 3·0 in St. Helens, and 3·1 in Aston Manor, to 11·1 in Hornsey, 11·5 in Burton on Trent, 11·6 in Derby, 11·7 in Swansea, and 13·1 in Southampton.

Deaths in Public Institutions.

The total deaths registered in England and Wales include 24,887, or 19·1 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding fourth quarters having been 16·4 per cent. In the 76 great towns the deaths in public institutions averaged 25·6 per cent. of the total deaths, the lowest percentages in the several towns being 4·9 in Rhondda, 5·6 in Handsworth (Staffs.) and in Smethwick, 9·2 in Stockton on

Tees, and 10·2 in Kings Norton; the highest percentages were 27·1 in Manchester, 27·8 in East Ham, 29·0 in West Ham, 30·2 in Brighton, 32·6 in Liverpool, and 40·3 in London.

Edinburgh, Glasgow, Dublin, and Belfast.

The annual rates of birth and death per 1000 living in these towns last quarter were as follows:—

——	Birth-rate.	Death-rate.
Edinburgh	19·9	14·3
Glasgow...	25·1	16·3
Dublin	25·7	20·5
Belfast	27·8	17·3

Colonial and Foreign Cities.

The Registrar-General has been favoured with returns of vital statistics by the authorities of 27 of the principal Colonial and Foreign Cities. From these a summary has been constructed for the 14 weeks ended 2nd January, 1909 (Table XIII.). Excluding the Indian cities, the highest and lowest annual rates of birth and death during the fourth quarter of 1908 were as follows:—

Birth-Rates.

——	Highest per 1000 living.	——	Lowest per 1000 living.
Toronto	34·7	Brussels	14·8
Bucarest	31·2	Paris	17·8
Trieste	31·0	Prague	18·6
St. Petersburg	28·0	Antwerp	20·6
Breslau	27·5	Berlin	20·7
New York	27·4	Vienna	20·9
		London ... 23·6	

Death-Rates.

——	Highest per 1000 living.	——	Lowest per 1000 living.
Rio de Janeiro	33·9	Christiania	11·5
St. Petersburg	25·6	Antwerp...	12·7
Moscow	23·5	Chicago	13·0
Trieste	23·5	Amsterdam	13·1
Bucarest	22·7	Brussels	13·2
Venice	20·9	Copenhagen	13·9
New Orleans	20·5	Stockholm	13·9
		London ... 13·7	

Small-pox caused 1,788 deaths in Rio de Janeiro, 85 in Moscow, 26 in St. Petersburg, 4 in Christiania, and 1 each in Paris and in Antwerp.

Asiatic Cholera caused 1,632 deaths in St. Petersburg and 2 in Moscow.

Measles was most fatal, in proportion to population, in St. Petersburg, Amsterdam, Rio de Janeiro, Moscow, and Budapest; *scarlet fever* in Bucarest, Prague, Moscow, St. Petersburg, and Budapest; *diphtheria* in Toronto, Venice, St. Petersburg, Chicago, and Moscow; *whooping-cough* in Christiania, Hamburg, Copenhagen, St. Petersburg, and Amsterdam; "*fever*" in Bucarest, St. Petersburg, Moscow, and New Orleans; and *diarrhœal diseases* in Moscow, Antwerp, St. Petersburg, and Munich.

Infantile Mortality.—Among those European cities for which the figures are available, the proportion of deaths of children under one year of age to 1000 registered births ranged from 82 in Stockholm, 94 in Christiania, 96 in Amsterdam, and 107 in New York, to 163 in Venice and in Bucarest, 174 in Breslau, 185 in Antwerp, 194 in Trieste, and 202 in Munich.

Indian Cities.—The death-rate was equal to 40·8 per 1000 in Madras, 32·2 in Bombay, and 22·6 in Calcutta. *Small-pox* caused 115 deaths in Calcutta, 29 in Bombay, and 1 in Madras; *measles* caused 22 deaths in Madras, 10 in Bombay, and 8 in Calcutta. Under the heading "*fever*" 1,797 deaths were returned in Madras, 1,542 in Calcutta, and 1,084 in Bombay, including 118 and 105 deaths from *plague* in Bombay and in Calcutta respectively. The mortality from *diarrhœal diseases* was excessive in all of these Indian cities; *Asiatic cholera* caused 212 deaths in Madras, 155 in Calcutta, and 58 in Bombay. The figures for Bombay are for 13 weeks only.

Returns of Notified Cases of Infectious Disease.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the 14 weeks ended 2nd January, 1909 (*see* pages xxvii—xxxii); and in the two following Tables, these numbers have been reduced to rates per 1000 living in the several populations (*see* pages xxxiii—xxxviii).

The Year 1908.

According to the quarterly returns furnished by local registrars, 942,611 births and 521,643 deaths were registered in England and Wales in the year 1908. The natural increase of population, by excess of births over deaths, was therefore 420,968, the average annual increase in the preceding five years having been 407,226.

From a Return issued by the Board of Trade it appears that in the twelve months ended 31st December 1908, the total passenger movement to and from places out of Europe showed a net balance outward of 43,113 passengers, compared with a net balance outward of 341,316 passengers in the corresponding period of the previous year.

The net outward balance among persons of British origin amounted to 91,176 persons. Of these 66,701 were English, 1,412 Welsh, 19,044 Scottish, and 15,710 Irish passengers, whilst there was an inward balance of 11,691 British Colonial passengers. Compared with the numbers in the previous year the net outward balance of English, Welsh, and British Colonial passengers showed a decrease of 63 per cent., that of Scottish a decrease of 57 per cent., and that of Irish a decrease of 58 per cent.

Among persons of foreign origin there was a net balance inward of 48,063, against a net balance outward of 109,857 in the previous year.

The birth-rate in England and Wales in 1908 was 26·5 per 1000 of the population, which is 0·2 per 1000 above the rate in 1907. Compared with the average in the ten years 1898–1907, the birth-rate in 1908 showed a decrease of 1·6 per 1000.

The death-rate in 1908 was 14·7 per 1000, which was 0·3 per 1000 below the rate in 1907, and lower than the rate in any other year on record; compared with the average rate in the ten years 1898–1907, the death-rate in 1908 showed a decrease of 1·7 per 1000.

The 521,643 deaths registered in 1908 included 113,646 of infants under one year of age, 229,351 of persons aged between one year and 60 years, and 178,646 of persons aged 60 years and upwards. The rate of mortality among infants under one year of age to 1000 registered births was 121, which is 3 per 1000 above the rate in 1907. The rate in 1908 was, with the exception of that recorded in the previous year, lower than in any other year on record. Compared with the average in the ten years 1898–1907, the rate of infantile mortality in 1908 showed a decrease of 21 per 1000. The death-rate among persons aged between one year and 60 years was 7·2, and that among persons aged 60 years and upwards was 67·9, per 1000 of the estimated populations at the respective groups of ages.

The total deaths registered included 17,897 from diarrhœa, 9,554 from whooping-cough, 7,910 from measles, 5,479 from diphtheria, 2,811 from scarlet fever, 2,643 from "fever" (including the three principal forms, *typhus*, *enteric fever*, and *pyrexia* of uncertain origin), and 12 from small-pox. Thus 46,306 deaths were attributed to these epidemic diseases, corresponding to a rate of 1·29 per 1000 living, against 1·55, 1·77, and 1·28 respectively in the three preceding years.

Birth-rate, Death-rate, and **Analysis** of **Mortality** during the year **1908.**

—	ANNUAL RATE PER 1000 LIVING.											Deaths under one year to 1000 Births.

* The Corrected Death-rates represent the Crude Death-rates in Col. 2 multiplied by the respective Factors for Correction for differences of sex and age constitution of population. For construction and use of these Factors *see* Annual Summary 1907, pp. vii-viii.

To different forms of violence 20,218 deaths were referred, being in the proportion of 0·57 per 1000 of the population, against 0·57, 0·57, and 0·56 per 1000 in the three preceding years.

The 521,643 deaths included 36,723 cases, or 7·0 per cent., in which inquests were held; and 7,428 cases, or 1·4 per cent., in which the causes were not certified either by registered medical practitioners or by coroners.

The foregoing statistics for the year 1908, having been derived from returns furnished quarterly by the local registrars, are subject to revision when the causes of death and other details shall have been finally classified and tabulated for publication in the Registrar-General's Seventy-first Annual Report, which is now in course of preparation.

TABLES.

TABLE I.—**Marriages, Births,** and **Deaths** registered in **England** and **Wales** in the Years **1898-1908,** and in each Quarter of those Years.

TABLE V.—**76 Great Towns.—Population; Births, Deaths,** and **Meteorology** in the 14 Weeks ended **2nd January, 1909.**

NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The deaths in London have been corrected as far as possible (1) by excluding deaths of all non-Londoners, and (2) by including the deaths of Londoners occurring in Metropolitan Public Institutions situated outside the County. (See Table XII.) The deaths in the other towns have been corrected, as far as possible, for deaths occurring in Public Institutions; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been credited to the respective areas to which they belong.

TOWNS.	Estimated Population in the middle of 1908.	Births.	Deaths.	The Deaths registered include: Deaths of Infants under 1 Year of Age.	Deaths of Persons aged 60 Years and upwards.	Deaths from: Principal Epidemic Diseases.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhœa.	Violence.	Inquest Cases.	Deaths in Public Institutions.	Uncertified Causes of Death.	Mean Temperature (Degrees Fahr.). *	Rainfall (Inches). *	TOWNS.

* The values for Mean Temperature and Rainfall relate to the calendar quarter.

† The figures for Edinburgh and Glasgow are for the calendar quarter. In addition to the deaths in Col. 12 one death in Edinburgh and 22 in Glasgow were registered as due to Cerebro-spinal meningitis, Epidemic Cerebro-spinal meningitis, Epidemic meningitis, or Cerebro-spinal fever. Deaths in Col. 13 include those from Enteritis and Gastro-enteritis also.

‡ Excluding deaths of persons admitted into public institutions from without the Registration Districts. In addition to the deaths in Col. 12 there were

[a] Phœnix Park.

[b] Fitzwilliam Square.

deaths of all non-Londoners, and (2) by including the deaths of Londoners occurring in Metropolitan Public Institutions situated outside the County. (See Table XII.) The death-rates in the other towns have been corrected for deaths occurring in Public Institutions; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been credited to the respective areas to which they belong. Of the deaths excluded from London in 1905, only those which occurred in the London Fever Hospital, the Metropolitan Asylums Hospitals, and the Middlesex County Lunatic Asylum were added to the several parts of the Outer Ring.

TABLE VII.—**One hundred and forty-two smaller Towns.—Population; Births and Deaths** in the QUARTER ended 31st December, 1908.

NOTE.—The 142 Smaller Towns are those with populations of 20,000 but not exceeding 50,000 at the Census of 1901. The deaths in these towns have been corrected for deaths occurring in Public Institutions, while in addition the deaths occurring in London of all persons known to belong to towns in the Metropolitan Outer Ring have been credited to the several towns to which they belong.

The *Registration Districts*, 633 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

[a] See page 2, note [b].

[b] For London the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrar.

II.—SOUTH EASTERN COUNTIES.—Registration Districts.

No.	Registration Districts.	Area in Statute Acres.	Enumerated Population, 1901.	Marriages: Registered in Quarter ended 30 Sept. 1908.	Births: Registered in Quarter ended 31 Dec. 1908. [a] The *Registration Sub-districts* (2026 in number) are sub-divisions of the *Registration Districts* in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; *F* a Hospital for Infectious Diseases; *H* another Hospital; and *L* a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

[b] See page 2, note [b].

[c] See page 6, note [b].

[a] 618 : 3.—Of the 7 deaths from diphtheria, 3 belonged to the Borough of Wrexham.
[b] 627 : 1.—The 5 deaths from whooping-cough occurred in the parish of Llandwrog.
[c] 628 : 2.—The 4 deaths from measles and the 3 from whooping cough belonged to the City of Bangor.
[d] 629 : 3.—Of the 4 deaths from whooping cough, 3 occurred in Colwyn Bay and Colwyn Urban District.

CHANGES IN REGISTRATION DISTRICTS AND SUB-DISTRICTS IN THE QUARTER ENDED 31ST DECEMBER, 1908.

Changes in Registration boundaries are made by order of the Registrar-General, with the consent of the Local Government Board. Those changes which affect the boundaries of Registration Districts are necessitated by changes in the boundaries of Poor Law Unions.

Date when change came into operation.	DISTRICT and Sub-district.				Name of Parish transferred.	Population, 1901.
	Decreased by change.		Increased by change.

The re-numbering of the sub-districts to be as follows: Brighouse (1), Elland (2), Ripponden (3), Sowerby (4), Halifax, South (5) and Halifax, North (6).

METEOROLOGY.

Remarks on the Weather over the United Kingdom during the Quarter ended December 31st, 1908.

EXTRACTED FROM THE

MONTHLY WEATHER REPORTS

OF THE

METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 170 STATIONS,

TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 56 STATIONS IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

OCTOBER, 1908.

Pressure, Winds and Weather.—In many respects the atmospheric conditions over the United Kingdom during October, 1908, were of a most unusual character, a leading feature being the very remarkable steadiness of their behaviour. The distribution of pressure presented a striking difference from the normal, and it had also the singular distinction that the mean for the entire month may be regarded as a fair general representation of the distribution on many individual days. The actual range of pressure at our stations during the month amounted to only ½ in. on the Straits of Dover and at Jersey, less than ¾ in. at the majority of stations, and about an inch in the extreme north of Scotland and on the coast of Mayo. On the 8th the barometer fell to 29·39 ins. at Blacksod Point, and on the 22nd it rose to 30·60 ins. at Aberdeen, so that the range over the whole Kingdom was less than 1¼ in., an exceptionally small amount for the season. Nearly throughout the period under review the region of highest pressure was found on the Continent, shifting about from time to time, but as a rule it was over Russia, where the barometer stood very high on several days, passing above 31 ins. at Moscow on the 23rd. On the other hand an extensive cyclonic system lay over the northern half of the North Atlantic, the position of the pressure minimum oscillating to and fro, northward, eastward, southward and westward, but always remaining at a considerable distance to the westward of our own coasts. On the 9th the barometer fell to about 28¼ ins. in the west of Iceland, and on the 24th to nearly 29 ins. at the Azores. From these facts it will be seen that the British Isles occupied a position about midway between the maximum and the minimum pressure systems. For the whole month the mean barometric values ranged from above 30·3 ins. in Denmark—still higher further east—to about 30·15 ins. in the east of England, 29·95 ins. in the west of Ireland, less than 29·9 ins. at Horta, Azores, and 29·43 ins. at Reykjavik, Iceland. There was thus a gradual diminution of pressure from east to west, so that the trend of the isobars over this country was almost due south to north, instead of the normal west to east. Pressure exceeded the average at all stations, the smallest excess, 0·04 in., being in the west, at Valencia, while all up the east coast of Britain the values were more than ½ in. higher than usual, as much as 0·35 in. at Sumburgh Head. The only depressions whose centres came near our coasts, were two very shallow ones which visited the mouth of the English Channel, on the 21st and the 27th respectively, the former moving down the west of France, the latter passing from France westward to the Atlantic.

Under the all but unvarying distribution of pressure described above, the wind was almost wholly from points in the Southern half of the compass. As a general rule the Southerly current was of little force, but occasionally, as the Atlantic depression surged eastward, an increase of wind occurred on our western coasts. On the 8th a Southerly gale was felt at Roche's Point and Malin Head, a strong South-Westerly gale at Blacksod Point, and South-Easterly at Castlebay. Stornoway and Blacksod had a Southerly gale on the 9th; Castlebay South-Westerly on the 11th; Stornoway and Malin Head Southerly on the 12th; Yarmouth South-Easterly on the 27th; and Blacksod Southerly on the 30th. At no anemometrical station was a mean velocity of 40 miles in an hour registered.

The weather which accompanied these unusual conditions of pressure and wind was also most abnormal. October is on an average the wettest month in the year, but on this occasion the precipitation was almost invariably small in quantity, there being very few records of as much as an inch in a day, while in many places the number of days of "rain and other forms of precipitation" included a considerable proportion of days on which the contents of the gauges consisted of measurable quantities of dew or of the moisture from fog. Of the 25 days at Lewes, 8 only were of rain. The heaviest falls of rain occurred with very slight local irregularities of pressure, 1·6 in. at Penzance on the 15th; 1·6 in. at Westbourne (Sussex),

1·7 in. at Watergate (Sussex), and 1·9 in. at Newchurch, Mon., on the 18th; 1·3 in. at Pant-yr-Eos, Mon., 1·4 in. at Abersychan, Mon., and nearly 2 ins. at Llandrindod Wells, 1·5 in. at Marchmont, 1·6 in. at Crathes, and 1·7 at Aberdeen on the 19th; and a little over an inch at Birmingham, Ballinacurra and Roche's Point on the 20th. On the morning of the 21st the southern part of Dorset was visited by one of the very few thunder-storms of the month, and in the space of about 5 hours 4 ins. of rain fell at the meteorological station in Weymouth, and in the same interval it is said that 6½ ins. fell on Portland Breakwater, 4 miles to the south of Weymouth. At Portland Bill the fall was 1·7 in.

Very fine, bright, and pleasant weather prevailed through the greater part of the month, and combined with the soft Southerly breezes, exceptional mildness was the result. There had been a decided increase of temperature at the close of September, and the warmth was continued into October, the thermometer in the shade rising to 75° in southern Ireland, and to higher levels over Great Britain, in Scotland to 77° at Aberdeen, Crieff, Laudale and Marchmont, and 78° at Gordon Castle, while in England 80° was reached at Bettws-y-Coed, Prestwich, Raunds, and Huddersfield, 81° at Epsom, 82° at Maidenhead, and 84° at Whitby. Equally remarkable were the night temperatures at this time, minimum readings of 58° and upwards being common, 61° at Bexhill-on-Sea and West Marina, St. Leonards, and 62° at Guernsey. Colwyn Bay, Whitby and Oban. After the 4th the excessive warmth moderated, but the thermometer continued well above the normal height, and on the 15th there was a sudden rise to 70° and upwards at numerous stations, to 72° at Aberystwyth, Towyn, Epsom, Cromer, Fulbeck, Hillington and Rauceby, and 73° at Geldeston. For a week from the 20th the weather was much colder, but not exceptionally cold for the time of year. In many localities the afternoon temperatures were below 50°; at various places in England, mainly on the 24th, the maximum was 45°, and at Ampleforth and Buxton 43°, the weather on this day being marked by falls of hail, graupel, sleet, or slight snow. Night frost occurred once or twice during this cold interval, of no great intensity as a rule, but on the morning of the 25th the shade minimum was 23° at Wokingham, 22° at West Linton, 21° at Llangammarch Wells, and 18° at Balmoral. This cold visit was soon over, and the closing days of the month witnessed a renewal of very mild conditions, temperature mounting well up into the sixties on the 29th, to 68° at Wisley, Greenwich, Rugby, Raunds and Cromer, and to 69° at Aberystwyth, Towyn, Epsom and Geldeston. The month's range of temperature amounted to 55° at Wokingham, 54° at Carlisle, and exceeded 40° at the majority of stations.

Bright auroral displays were witnessed in the north of Scotland on the 6th and 31st.

Although there was so much fine weather, morning fog was experienced rather frequently in most inland districts, occasionally rather thick. On the coast there were three well-defined periods of foggy weather, 1st-8th, 13th-20th, and 29th-31st. In the first period the fog was dense and lasting in many western localities, and at some places in the east.

The temperature of the sea water was in many neighbourhoods equal to or a little above what it had been a month earlier, but on the east coast of Britain, and off the extreme south-west of England, of Ireland, and of Scotland, it showed a decrease of a degree. It was somewhat colder than the air on shore along the north-east of Britain, but in most other regions it was rather warmer. At the Owers light vessel, off the Sussex coast, the temperature of the water averaged 60° for the month.

Rainfall.—Almost without an exception the returns disclose a deficiency of precipitation ranging upwards to 4·3 ins. at Buxton, 4·7 ins. at Arlington, 5·5 ins. at Fort William, 6·2 ins at Laudale, and 7·5 ins. at Glencarron. The mean deficiency over the western district of Scotland was 3·2 ins., and over the northern district 3·8 ins. The totals for individual stations were therefore in many places exceptionally small—Glencarron had less than 2 ins., Arlington 1·7 in., Laudale 1·5 in., and Buxton 1·1 in. On the other hand, Caragh Lake had 4·1 ins., Marchmont and Pant-yr-Eos 4·2 ins., Portland Bill 4·4 ins., Rousdon 5·2 ins., and Weymouth 6·5 ins., but these were exceptions to the rule. Falls of less than an inch were numerous, even the wet station Fort Augustus totalled only 0·9 in. Bawtry, Gordon Castle and Strathpeffer had 0·65 in., and Nairn only 0·4 in. In many places the various forms of precipitation were in measurable quantity on less than ten days, at Ampleforth on six days.

Bright Sunshine.—Excepting in the west of Scotland and the south of Ireland the duration of sunshine was above the normal, by 46 hours at Llandudno, and 52 hours at Woolacombe. The largest aggregates were 163 hours (50 per cent. of the possible duration) at Ramsgate, and 161 hours (49 per cent.) at Jersey; the smallest, 45 hours (15 per cent.) at Balta Sound, and 41 hours (13 per cent.) at Castlebay.

NOVEMBER, 1908.

Pressure, Winds and Weather.—The mean distribution of atmospheric pressure for November did not differ greatly from the normal, the lowest barometer readings being indicated to the south-westward of Iceland the mean value at Reykjavik being 29·49 ins., Thence in a south-easterly direction across the British Isles the values show a gradual increase to 30·11 ins. at Paris, whereas at the Azores it was slightly below 30·1 ins. There was in all parts of the United Kingdom an excess of pressure, ranging from 0·01 in. at Sumburgh Head, and 0·04 in. at Wick, to more than 0·1 in. at most stations in England and

Ireland, and as much as 0·13 in. at Yarmouth. For the time of year the extreme range of pressure was generally rather small, 0·8 in. at Pembroke, and an inch or less at a number of other places in the south. Only in the north-east of Scotland did it amount to or slightly exceed 1·5 in. On the 17th the barometer rose to 30·48 ins. at Scilly, and on the 30th to 30·47 ins. at Dover and Oxford, while readings below 29 ins. were limited to the stations in the north of Scotland, 28·68 ins. at Sumburgh Head on the 22nd, and 28·98 ins. at the same place on the 25th. The mean pressure gradient was steeper than usual, 0·3 in. between Jersey and Shetland, instead of the normal 0·2 in. Although the pressure distribution was of a South-westerly type the winds varied greatly in direction, in the main Southerly to Westerly, but over the southern districts there was a considerable proportion of Northerly to Easterly breezes.

During the first week the almost unvarying distribution of pressure which had formed such a remarkable feature of the October conditions was maintained without any great variation an area of low pressure lying to the south-westward, and high pressure prevailing to the northward and eastward. This produced a great preponderance of South-Easterly and Easterly winds, which were, however, of very little force until, on the 7th, the depression to the south-westward began to increase in intensity and at the same time to move eastward across the Bay of Biscay for the Western Mediterranean. Strong or high Easterly winds then set in on our southern and eastern coasts, and on the evening of the 7th and the morning of the 8th a gale was felt at Portland Bill. On the former date the pressure tube anemometer at Pendennis Castle indicated a wind velocity of 45 miles in an hour, and in a gust at the rate of 55 miles per hour. The strong to high wind held until the 10th. This period was marked by generally fine and dry weather, a very large number of stations in England and Wales registering no rain through the first nine or ten days.

A change now took place in the type of pressure distribution, and from the 11th onward anticyclones occupied positions to the south-west, south or south-east—from the Atlantic to central Europe—the barometer rising above 31 ins. at Lemberg on the evening of the 15th—while depressions were rather frequent to the north-west, north and north-east, or east of the British Isles, of no great depth as a general rule, the barometer sinking on the Norwegian coast to below 28·8 ins. on the 17th, and 28·7 ins. on the 22nd, and in Iceland below 28·5 ins. on the 24th, 27th and 28th. Southerly to Westerly winds were therefore largely in the ascendant over this country, occasionally veering temporarily to between West and North. Under these conditions the air movement was brisk in many localities every day for three weeks, the force of at least a high wind being felt on some part or other of our coasts daily. On the approach of the Atlantic low pressure on the 11th a Southerly gale sprang up locally on the Irish coast, and at Blacksod Point it increased to a strong gale. One of the very few thunderstorms of the month occurred on the morning of the 13th along the south coast of England, from Penzance to the Straits of Dover, associated with a shallow irregularity of pressure over Wales and the Irish Sea. A small secondary disturbance appeared off the south-west of Ireland on the evening of the 13th, and during the passage of this minimum to the Irish Sea and the south-east of England on the following day, a Southerly gale was felt at Stornoway, a strong Southerly gale at Pembroke, a whole gale from South-East at Donaghadee, and a Northerly gale at Holyhead. From the 16th to the 21st, with disturbances passing eastward beyond the Arctic Circle, Southerly to Westerly or North-Westerly gales were reported daily at one or more of the exposed coast stations in the north and north-west, a strong Westerly gale at Malin Head on the 17th, and Northerly at Holyhead on the 19th.

The most important disturbance of the month made its appearance to the westward of Scotland on the evening of the 21st. A rapid fall of the barometer set in, the pressure minimum passing round by Shetland to southern Scandinavia and the Baltic by the evening of the 23rd. From the morning of the 22nd to the forenoon of the following day a Westerly or North-Westerly gale blew on nearly every section of our coasts, a strong gale at Barra, Jersey and Portland Bill, and a whole gale at Blacksod Point and Malin Head. According to the anemometrical records a mean hourly velocity of 52 miles was attained at Holyhead, 54 miles at Southport, and 56 miles at Fleetwood, while in the squalls a velocity at the rate of 61 miles an hour was reached at Roche's Point, 63 miles at Aberdeen, 64 miles at Gorleston, 70 miles at Scilly, 72 miles at Holyhead, and 73 miles at Southport. The disturbance produced the heaviest rain of the month, but there were few falls of more than an inch—on the 21st 1·1 in. at Ardnadam (Argyll), 1·2 in. at Arlington, Buxton, Rothesay and Laudale, 1·5 in. at Bethesda, 1·6 in. at Stonyhurst, 1·7 in. at Darwen, and 1·8 in. at Killybegs; on the 22nd 1·1 in. at Gruline (Mull), and 1·2 in. at Kinlochewe (Ross). Lightning was reported on the 22nd at several stations in Ireland, Scotland and the north of England, thunder and lightning at Dunfanaghy (Donegal).

From the 24th to the 28th an unsettled southerly to westerly type of conditions continued, the wind rising to the force of a gale each day at some of the west coast stations, a strong gale at Stornoway, Barra, and Malin Head on the 25th, at Malin Head on the 26th and 28th, and a whole gale at Blacksod Point on the 27th. A few falls of over an inch of rain occurred in the far west and north-west on the 27th and 28th. Thunderstorms visited various parts of Scotland, Markree Castle and Newton Rigg on the 25th. The next two days were very quiet, an anticyclone having spread all over the country from the Continent.

A very notable feature of the month's weather was its almost uniform mildness, coupled with more than usual sunshine in many districts, and an appreciable decrease in the frequency and intensity of fog. Afternoon temperatures of 60° or above were recorded in various localities at the commencement, about the middle, and towards the close, 63° at

Brighton and Southampton on the 1st, and at Jersey on the 2nd, while Guernsey (Villa Carey) touched 65° on the 2nd and 3rd. Generally, however, the maxima were above 50°; even so far north as Kilmarnock and Oban they failed to reach this level on only six days, and in the west, at Swansea, on only two days. Similarly, the night minima rarely descended below 40°, in several instances they were as high as 50° or above. But there were some striking exceptions, all of very brief duration. Between the 8th and the 11th there was a sudden and severe frost, with shade temperatures of 20° and under at a number of stations, 17° at Kingston (Derby), Nottingham and Woburn, 16° at West Linton and Barnet, 15° at Garforth, and 10° at Wokingham. Another, but less severe frost occurred on the morning of the 20th, 25° at Carlisle, Newton Rigg and Kingston, and 22° at West Linton. The frost on the 30th was most severe generally in Ireland, 26° at Cahir, Kilkenny and Markree Castle, 25° at Clongowes Wood, 24° at Glasnevin and Hawarden Bridge, and 22° at Bawtry. Scotland was thus less affected than the rest of the Kingdom.

Aurora was reported at Gordon Castle on the 3rd, at Deerness on the 17th, and over north-eastern Scotland on the 23rd.

A good deal of fog occurred on the western and eastern coasts in the first few days, but subsequently there were few reports, mostly on the east coast.

The temperature of the sea water along the coasts was nearly everywhere considerably colder than in October, by 8° at the Shipwash, and 10° at Margate. Notwithstanding this the water was warmer than the air on shore, by 4° or 5° in many neighbourhoods, 6° at Burntisland and Wick, and 7° at the Owers (off Spithead).

Rainfall.—At Stornoway the precipitation was 1·2 in. above the average, and at a few other northern stations there was a small excess, but generally the figures disclose a deficiency, in many localities of more than an inch, up to 3 ins. at Guernsey (Villa Carey), and 3·7 ins. at Falmouth. The largest aggregates were 6·4 ins. at Fort William, 6·6 ins. at Bethesda and Stornoway, 7·1 ins. at Laudale, 7·2 ins. at Gruline, 9·1 ins. at Kinlochewe, and 9·3 ins. at Glencarron. In numerous instances they were less than an inch, down to 0·6 in. in the Forest of Dean (200 ft.), and 0·5 in. at Chelsea. At Foynes rain was measured on 29 days, and at Balta Sound on 26 days, but as a rule the falls were not frequent, on less than 10 days at a number of stations, 4 days in the Forest of Dean (200 ft.).

Bright Sunshine.—As a general rule the weather was brighter than usual, especially in the south, where the excess of sunshine ranged upwards to 47 hours at Jersey, 48 hours at Ventnor, and 53 to 60 hours in Guernsey. The largest totals were 122 hours at Guernsey and 123 hours at Jersey (46 per cent. of the possible duration); the smallest, 18 hours (7 per cent.) at Huddersfield, and 17 hours at Manchester City (7 per cent.) and Balta Sound (8 per cent.).

DECEMBER, 1908.

Pressure, Winds and Weather.—The range of the barometer during December was considerably greater than in previous months, exceeding 1¼ in. at Valencia, and at several of the southern and eastern stations it was about 1¾ in. The regions of maximum pressure were invariably found over Continental countries, from the Spanish Peninsula round to Scandinavia and Russia. As a rule the anticyclones were of only moderate intensity for the winter season; it was not until nearly the close of the month that the barometer rose above 30·8 ins. in the extreme north of Scandinavia (26th and 27th), and round the Gulf of Finland (31st). On several days these high pressure systems embraced the British Isles, the barometer rising to 30·47 ins. at Oxford and Yarmouth on the 1st, to 30·4 ins. at Jersey on the 21st, and to 30·58 ins. at Jersey and 30·51 ins. at Portland Bill and Dover on the 31st. Out on the upper part of the Atlantic, on the other hand, pressure was frequently low, the central spaces of depressions being indicated at a considerable distance beyond our western coasts on at least 24 days. The mean distribution of pressure for the whole month was in accordance with these general features. At Reykjavik, in the south-west of Iceland, the barometer averaged 29·25 ins., and from thence to eastward and south-eastward the results show a fairly uniform increase to 29·65 ins. in the Hebrides and to 30 ins. from Brittany across the north of France, Belgium, and Holland to and beyond the north of Denmark. The gradient across the British Isles was about the same as the normal, but the type was more South-Westerley. Winds from South and South-West prevailed in all districts, with a fair proportion from the North-West and South-East quarters.

During the opening days of the month the conditions over these islands were wholly under the influence of the Continental anticyclone, which had spread over the country on November 29th, so that calm and light variable breezes prevailed, with a good deal of fine weather, but in many parts of England the atmosphere was frequently misty to foggy. By the evening of the 5th cyclonic systems on the northern part of the Atlantic began to expand north-eastward towards northern Europe, and the conditions then assumed a less settled type for the rest of the month. The weather variations, however, were mainly produced by small pressure irregularities, secondaries to the primary low pressure systems out on the Atlantic.

On nearly every day the wind was fresh to strong or high, chiefly in the western districts, and until the middle of the month thunderstorms, or thunder or lighting alone, occurred in several parts of England, Ireland, and the west of Scotland, the rainfall also at this time being considerable. Falls of an inch or more in a day were, however, rare, 1·06 in. at Laudale and Oban, and 1·7 in. at Ardnadam (Argyll) on the 5th; 1·5 at Glencarron, and 1·8 in. at Fort William on the 7th; and 2·1 ins. at Pembroke on the 15th.

The largest and deepest depression which visited these islands appeared to the south-westward of Iceland on the morning of the 7th, and reached the neighbourhood of Shetland on the 10th. On the morning of the 10th a secondary formed near Dublin, and moving north-eastward, it became merged next day in the primary on the North Sea. Subsequently, the disturbance passed across the Low Countries and dispersed on the Baltic. On the 10th and 11th the barometer fell below 29 ins. at nearly every station in the United Kingdom. A decided increase in the force of the wind, South-Westerly, veering North-Westerly, was experienced in all districts, gale force being attained at many stations, a strong gale at Scilly, Jersey, Portland Bill and Spurn Head. At Shoeburyness the anemometer registered a mean hourly velocity of 44 miles (at the rate of 58 miles an hour in gusts); Southport 45 miles (57 miles in gusts). Pendennis Castle and Fleetwood 48 miles (the former 63 miles in gusts). The heaviest rain was in Scotland, 1·1 in. at Aberdeen, 1·2 in. at Dyce, and 1·7 in. at Deerness on the 11th.

Until Christmas the most notable feature of the weather was its uniform mildness. With a preponderance of South-Westerly breezes temperature was nearly always above its normal level, there were no night frosts of any marked intensity, very few minimum values as low as 25° being recorded, while in the day time maxima above 50° were frequent, but readings above 55° were rarely reported, 57° at Killarney and Valencia on the 1st, at Jersey on the 13th, and at Dublin on the 21st, 58° at Torquay on the 19th and at Killarney on the 20th.

On Christmas day the distribution of pressure underwent considerable modification, an Atlantic depression passing on to the Bay of Biscay, and the Continental anticyclone working round to northern Scandinavia, while the middle Atlantic anticyclone was expanding to the Spanish Peninsula. These islands were thus in a belt of low pressure (extending from Iceland to the Mediterranean) separating two high pressures. Moderate temperature and very quiet dry weather were experienced in all parts of the Kingdom on the 25th, but on the following day the conditions gradually assumed a more disturbed appearance, the wind increasing from between South, South-East and North-East, rain setting in in many localities, and temperature decreasing appreciably. In the course of the night of the 26th the conditions quickly became of a most wintry type. When observations were taken on the morning of the 27th, snow was falling in most parts of England and Eastern Scotland, and temperature continued to give way. For four days the inclement weather was maintained, more or less snow being experienced except in a few localities in the extreme south-west and west. The conditions were aggravated on the 29th, on which morning a secondary disturbance appeared off the south of Ireland, and in the course of the day it was transferred to the Channel Isles and on to the north of France. Under its influence and that of the primary system (centred near Iceland) gales blew on many parts of our coasts, a strong Westerly gale at Malin Head, and from South-East at Donaghadee, a whole gale from South-East at Castlebay. At Deerness the anemometer registered a mean hourly velocity of 56 miles in an hour. With the high winds prevailing the snow was swept into great drifts in many places, and traffic by road and rail had to be suspended temporarily. In the circumstances it was difficult to ascertain what depth of snow fell on any one day. Abersychan had 9 inches on the 28th; next day Brighton had $5\frac{3}{4}$ ins. and Lewes $6\frac{3}{4}$ ins. In the four days, 27th–30th, Llandrindod Wells had $11\frac{1}{4}$ ins., yielding 0·94 in. of water, Parkstone, Dorset, 1 foot, yielding 0·84 in. The snowfall at Aberdeen on the 27th yielded 1·3 in. of water, on the 29th at Stockbridge, Hants, 1·2 in., and at Watergate, Sussex, 0·8 in. In the far west very heavy rain fell on the 28th, with some snow or sleet locally. The largest measurements of water were 1·3 in. at Dundrum, 1·5 in. at Kilkenny and Waterford, 1·6 in. at Mount Callan (Clare) and at Falmouth, 1·9 in. at Penzance, and 2·1 ins. at Bray. At Falmouth an inch of rain fell in 3 hours 20 minutes on the morning of the 29th.

The cold during these four days was very severe, especially in the south of England. On the 29th temperature failed to rise above 27° at Brighton, 26° at St. Leonards, and remained below 25° in many places, as low as 22° at Garforth, Buxton, Fulbeck, Kingston-on-Soar, Oundle, Coventry, Winslow, Wisley and Wokingham. Next day the thermometer reached its lowest level, descending below 20° at places on the south coast, to 16° at Totland Bay, Isle of Wight, while inland there were many minima below 10°, down to 3° at Garforth, Raunds and Swarraton, 1° at Woburn, zero at Maidenhead, −1° at Liphook, Hants. Falmouth did not pass below 35°, and Penzance 36°. The night of the 30th brought a very rapid rise of temperature, and the early morning observations of the 31st showed that the frost had already disappeared, the year closing in mildness.

The anticyclonic fine weather of the first week was marked by much fog on the east coast of Britain daily, on the Irish Sea during the first three days, while on the south coast only one or two localities were affected daily. Between the 14th and the 22nd fog was again fairly prevalent on the east coast and in the western channels, much less so on the south coast.

Off Shetland the mean temperature of the surface sea water was degree higher than that for November, but on all other coasts it showed a decrease, of 4° or more in many localities, 6° off Scarborough and at the Shipwash, and 7° off the Mersey Bar. Even then the water was warmer than the air along the coast, by 5° or more at a number of places, by 7° off Wick, the Isle of Man and Lamlash, and by 8° off the coast of Down.

Rainfall.—There was an excess of precipitation generally over the north and west of Scotland, the north of Ireland, south-eastern England and the English Channel, Rothesay showing an excess of 2·2 ins., and Pembroke of 2·1 ins., whereas Glencarron had a deficiency of 2·1 ins. The aggregate totals varied considerably. Gruline, Mull, had 12·3 ins., Ardnadam 11·2 ins., Fort William 10·5 ins., Caragh Lake, Kerry, 10·1 ins., and several other western and northern stations more than 7 ins. There were, however, few totals of less than an inch, 0·9 in. at Rounton and Cromer, 0·8 in. at Marchmont, 0·7 in. at Durham, and 0·6 in. at Leith. Precipitation was more frequent than in many preceding months, the smallest frequency being 12 days at Wakefield, while Bawtry, Lowestoft, Clacton-on-Sea, Tottenham and Trinity College, Dublin, had 13 in. At the other extreme Swansea, Llandovery, Llandrindod Wells, Cahir and Blacksod Point had 28 rain days, Stornoway and Sumburgh Head 29, Balta Sound and Valencia Island 30, and Foynes 31.

Bright Sunshine.—In North Wales and the north-west of England there was a small excess of sunshine, Llandudno receiving 13 hours more than the average. The greatest deficiency was in the east of England, Geldeston losing 28 hours, and Hillington 36 hours. The largest totals were 61 hours at Jersey, 60 at Penzance, 58 at Totland Bay, and 57 at Bognor—24 per cent. of the possible duration. Manchester City had 8 hours (4 per cent.), Bunhill Row, London, 7 hours (3 per cent.), Garforth 6 hours (3 per cent.), Hillington 5 hours (2 per cent.), Hull and Newcastle-on-Tyne 4 hours (2 per cent.), and York only 3 hours (1 per cent.).

TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

Prepared in the Meteorological Office under the direction of W. N. Shaw, LL.D., Sc.D., F.R.S.

In compiling the following Tables (pp. 80 to 89) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South-East; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 13.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

The stations selected, with the names of the Observers, are shown below.

LIST OF STATIONS AND OBSERVERS.

Station.	Observer.	Station.	Observer.
1. LONDON:—		4. ENGLAND, E.:—	
Tottenham ..	J. F. Butler-Hogan, M.D., LL.B., for Urban District Council.	Cromer ..	W. H. Archer, for Urban District Council.
Camden Square	H. Robert Mill, LL.D., D.Sc.	Hillington ..	Rev. H. E. B. Ffolkes, M.A.
Westminster ..	The Meteorological Office.	Norwich .. (Eaton.)	A. W. Preston.
Greenwich ..	The Royal Observatory.	Cambridge ..	R. Irwin Lynch, M.A. The Botanic Gardens.
Norwood ..	W. Marriott.	Bennington ..	Rev. J. D. Parker, LL.D.
Kew	The Kew Observatory (National Physical Observatory).	Clacton-on-Sea	A. W. Shadick, for Urban District Council.
2. ENGLAND, CENTRAL:—		Berkhamsted ..	E. Mawley.
Huddersfield	J. Firth.	5. ENGLAND, N.E.:—	
Wakefield ..	A. French, M.R.C.S., L.R.C.P.	Cockle Park .. (*near Morpeth*).	T. E. W. Dobson, for the Northumberland County Council.
Belvoir Castle	W. H. Divers, for the Duke of Rutland, K.G.	North Shields	The Meteorological Office.
Coventry ..	E. Hugh Snell, M.D., M.O.H., for the Corporation.	Durham ..	Prof. R. A. Sampson, M.A., F.R.S.
Nottingham ..	Arthur Brown, M.Inst.C.E., and Philip Boobbyer, M.D., M.O.H., for the Corporation.	York	Oxley Grabham, M.A., for Yorkshire Phil. Soc.
Birmingham ..	A. Cresswell, for the Midland Institute Observatory.	Hull	H. B. Witty, for the Corporation.
Oxford	The Radcliffe Observatory.	Spurn Head ..	The Meteorological Office.
Bath	W. H. Symons, M.D., M.O.H., for the Corporation.	Lincoln ..	S. R. Moss and W. Barr, for the Corporation.
Shrewsbury ..	Capt. W. E. Manser, R.E.		
Buxton	W. Pilkington.		
Sheffield ..	E. Howarth. The Weston Park Museum.	6. ENGLAND, N.W., WITH NORTH WALES:—	
Stokesay ..	Rev. W. La Touche, B.A.		
Cheltenham ..	A. C. Saxby, for the Corporation.	Southport ..	J. Baxendell, for the Corporation.
		Manchester ..	J. Niven, M.A., M.B., M.O.H., for the Corporation.
3. ENGLAND, S.E.:—			
Salisbury ..	Thos. Challis, for the Earl of Pembroke.	Aspatria ..	J. Smith Hill, B.A., B.Sc., J.P. The Agricultural College.
Brighton ..	D. Forbes, M.D., M.O.H., for the Corporation.	Stonyhurst ..	Rev. W. Sidgreaves, S.J. The Observatory.
Eastbourne ..	S. R. Henderson, for the Corporation.	Llandudno ..	W. Little, for the Town Council.
Portsmouth ..	A. Mearns Fraser, M.D., M.O.H., for the Corporation.	Liverpool .. (Bidston.)	W. E. Plummer, M.A. Bidston Observatory.
Southampton .	A. Vaughan, for Director General of Ordnance Survey.	Bettws-y-coed	Dr. H. W. Fox, for District Council.
Ventnor ..	Miss Gibson, for Royal National Hospital for Consumption.

* The Summary for "London" is for three calendar months. The "difference from average" is computed from the data for Camden Square, Norwood, and Kew, the average used being that for the 35 years 1871-1905. (Sunshine, 25 years 1881-1905, at Westminster and Kew.) A comparison with the averages for 65 years 1841-1905 for the Royal Observatory, Greenwich, is given in the following tables.

For corresponding values for the years since 1878, *see* Appendix I. to the Weekly Weather Report of the Meteorological Office, 1908.

October, 1908. Station.	Height of Barometer Cistern above M.S.L.	Barometer. Mean Pressure, at 32° F. at Station Level.	Air Temperature. Mean of A	Mean of B	Mean of A and B.	Difference from Average. NOTES ON THE STATISTICAL TABLES.

Hours of Observation.—Observations are made at 7 a.m. and 6 p.m. G.M.T. at telegraphic reporting stations (8 a.m. and 8 p.m. at Oxford), and at 9 a.m. and 9 p.m., mean local time, at normal climatological stations. The names of normal climatological stations are printed in heavy type. Observations are taken at 9 a.m. only at *Brighton, Coventry, Llangammarch Wells* and *Portsmouth*, and at 9 a.m. and 6 p.m. at *Ventnor*. At the telegraphic reporting stations, the names of which are printed in ordinary type, the results given under hygrometer and cloud are based on the morning observations only.

Barometer.—The correction for latitude has not been applied. The values are for station level. They are the means of readings at 7 a.m. and 6 p.m., or at 9 a.m. and 9 p.m. respectively, except in the cases of Brighton, Coventry, Llangammarch Wells, Portsmouth and Ventnor, where they are the means of the observations at 9 a.m.

Rainfall.—The amounts are for the 24 hours commencing at the time of morning observation.

Weather Phenomena.—The number of days of Rain, Snow, Hail, Thunderstorm, Fog and Gale are counted irrespective of the hours at which the phenomena occur. Except in the case of rainfall (see above) the day is the civil day. A day is reckoned as a day of "clear sky," if the mean of the estimates of the "amount of cloud" at the two hours of observation is less than 2, and as an "overcast" day if the mean is greater than 8.

Wind Summaries.—The results given under wind direction, and the number of observations of calms and of fresh or strong wind, are based on the observations at fixed hours taken twice a day. At Brighton, Coventry, Llangammarch Wells, Portsmouth, and Camden Square, where observations of wind (and cloud) are taken only once a day, the observer's results have been multiplied by 2, in order to render them more nearly comparable

Cloud (0–10).	Rain and other forms of Precipitation.				Weather, Number of days of								Wind. No. of observations at 9 a.m. and 9 p.m., or at 7 a.m. and 6 p.m.

with those for other stations. At Ventnor the results are based on observations at 9 a.m. and 6 p.m. (January 3 p.m.). At Falmouth, Kew and Stonyhurst the wind observations are based on the records of a standard Robinson anemometer (factor 2·2). (At Plymouth and Southport the equivalent values are obtained from a Dines Pressure Tube Anemometer.) Velocities of between 13 and 38 miles in the hour have been entered as "fresh or strong winds," velocities of 39 miles in the hour, or above, as gales. *See* a Report by the Director of the Meteorological Office entitled "The Beaufort Scale of Wind Force ... ." Official No. 180.

Averages.—The averages used are—Temperature and Rainfall for the 35 years 1871–1905; Bright Sunshine for the 25 years 1881–1905. The values are published in Appendix III. to the Weekly Weather Report of the Meteorological Office for 1906.

Royal Observatory, Greenwich.—The averages for Temperature and Rainfall, with which the current values are compared, are for the 65 years 1841–1905. The averages for sunshine are for the period 1897–1906. The earth temperatures are taken at a depth of 3 ft. 2 ins. The daily rainfall amounts are those for the 24 hours comprising the civil day. The numbers of days in each month of the quarter which were persistently overcast from midnight to midnight were 0, 0, 2, the number of persistently cloudless days were 3, 0, 0, the number of persistently foggy days were 0, 0, 0.

Mean Values for Districts.—The monthly mean values for districts for temperature, rainfall and sunshine are computed from the data for those stations which are included in the Weekly Weather Report of the Meteorological Office. The selection of stations is not identical with that included in this Report. The district values, as quoted, are comparable with the statistics published in previous issues of the Weekly Weather Report of which a Summary is in course of preparation. The averages with which the current district values are compared are for the 25 years 1881–1905. The district values for amount of cloud and earth temperatures are taken from the Monthly Weather Report of the Meteorological Office.

INDEX OF REGISTRATION DISTRICTS.

The following Index furnishes a reference to the *Number** of each REGISTRATION DISTRICT. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.

Aberayron, 604.
Abergavenny, 582.
Aberystwith, 605.
Abingdon, 115.
Alcester, 397.

INDEX OF URBAN DISTRICTS

As existing on 31st December, 1908, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked * have been created, and the boundaries of those marked † have been altered since the Census of 1901. The exact constitution of each Urban District and of each Registration Sub-district at the time of the last Census is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,171 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 156 were each co-extensive, at the end of December, 1908, with one or more Registration Areas.
